Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

SEC. 1700 • CIRCUIT ASSEMBLIES / PC BOARDS
SEC. 2200 • CONTROLS (COMPONENTS & SYSTEMS)
SEC. 2300 • CRYSTALS / TUNING FORKS / RESONANT REED DEVICES

Vol. 3 PASSIVE COMPONENTS / MATERIALS / HARDWARE
SEC. 1400 • CABINETS / CONTAINERS / RACKS, ETC.
SEC. 1500 • CAPACITORS
SEC. 1600 • CHEMICALS
SEC. 1800 • COILS / ASSEMBLIES / FORMS

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

UNITED TECHNICAL PUBLICATIONS, INC. • 645 Stewart Ave., Garden City, N.Y. 11530 • (516) 248-9700

INTRODUCTION

This 1971-72 edition of **eem/Electronic Engineers Master** is the fourteenth and largest volume published to date. You will find more catalog data included than ever before, systematically presented for the first time in **three separate volumes.**

Volume 1 — Test Instruments, Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

The 55 **eem** Product Sections have been individually assigned to their appropriate volume. A listing of the product sections within each volume appears on each cover. A complete listing of the 55 product sections appears on the first page of each volume (pages 1, 301, 989, 2009 and inside the back cover).

United Technical Publications' Time-Saving Product Information System

We have drawn upon the experience of hundreds of engineers and purchasing agents to develop a time-saving product/information system. It includes these major elements:

eem/Electronic Engineers Master

This bound catalog file for the complete product data of many huundreds of manufacturers is divided into three volumes with a total of 55 product sections. It includes the **Catalog Section** (white section); an industry-wide **Product Directory** (green section); a verified **Directory of Manufacturers** (yellow section) which can put the products and sales offices of more than 6,000 manufacturers at the user's fingertips; and a **Trade Name Directory** which starts on page 957 in the white pages of Volume 1.

Electronic Products Magazine

The electronic industry's only major magazine devoted 100% to products, product application and product selection, EPM keeps engineers and purchasing agents up to date on all phases of products.

Prices

Prices are furnished for information only — they are not offered as quotations. Participating manufacturers reserve the right to change specifications, revise prices or discontinue items without notice. While every precaution has been taken to assure accuracy in content, the publisher cannot be responsible for manufacturers' claims and representations; nor can any guarantee be made against the possibility of error or omission.

Circulation Policy

eem/Electronic Engineers Master is distributed annually at no charge to qualified engineers and purchasing agents, affiliated with North American manufacturers, research laboratories and government agencies. To qualify for a subscription you must be actively engaged in application, selection, specification, design or procurement of electronic components, materials, equipment and related fabrication services.

Official subscription form may be obtained by submitting the following on your company's letterhead: (1) name and title, (2) job function and duties, (3) main products manufactured or developed by your company, division or laboratory. Please include building number or mail station with address. Letters must be signed personally. Group qualification is not acceptable. The cost of **eem** to nonqualified personnel is $20.00 per copy.

No portion of this book may be reproduced without express permission of the publishers.

Library of Congress Catalog Card Number 58-9813.

PRODUCT INDEX AND DIRECTORY

This Product Index and Directory contains listings for all products in **eem**. Since **eem** consists of three volumes, if a product is shown in this volume, a complete list of its manufacturers appears below the product heading. If the product appears in one of the other two volumes, a cross reference indicates the appropriate volume.

For products which are included in this volume, manufacturers are listed alphabetically in two groups under each product heading. The first group **(shown in bold face)** includes those manufacturers whose catalog pages appear in the white pages of **eem**. Page numbers are included if information on the specific product shown in the heading is included in the manufacturers' pages. The second group includes those manufacturers who make this product but whose catalog pages do not appear in the white section.

Delays, Time (Excluding Delay Lines)—See Vol 2

Demagnetizers—See Vol 1

Demodulators—See Vol 1

Demodulators, Magnetic—See Vol 2

Densitometers, Electronic—See Vol 1

Deposition Equipment, Vacuum & Accessories-Also See Evaporation Equipment, Electron Beam—See Vol 1

Desiccators—See Dehumidifiers—Vol 1

Desoldering Tools & Equipment—See Soldering Accessories; Soldering Equip.; Soldering Guns; etc.

Detectors, A-F—See Detectors, Frequency—Vol 1

Detectors, Cable & Pipe—See Locators, Metal

Detectors, Chroma—See Vol 1

Detectors, Coaxial—See Vol 1

Detectors, Corona—See Testers, Corona—Vol 1

Detectors, Crystal—See Vol 1

Detectors, Electrostatic—See Meters, Volt, Electrostatic—Vol 1

Detectors, F-M—See Detectors, Frequency—Vol 1

Detectors, Fire & Smoke (Electronic)—See Fire Detection & Fighting Equip.—Vol 2

Detectors, Flaw & Defect-Also See Locators, Cable & Line Fault; Locators, Open-Short—See Vol 1

Detectors, Frequency—See Vol 1

Detectors, Gas Leak—See Vol 1

Detectors, Ice, Sleet & Snow—See Vol 1

Detectors, Impedance—See Meters, Impedance—Vol 1

Detectors, Infrared—See Vol 2

Detectors, Ion—See Vol 1

Detectors, Light Intensity—See Meters, Light, Nonphotographic—Vol 1

Detectors, Magnetic—See Vol 1

Detectors, Metal—See Locators, Metal

Detectors, Microwave—See Vol 1

Detectors, Null—See Indicators, Null—Vol 1

Detectors, Phase-Sensitive—See Vol 1

Detectors, Photovoltaic —See Cells, Photovoltaic—Vol 2

Detectors, Radiation—See Counters, Geiger Counters, Scintillation—Vol 1

Detectors,R-F—See Detectors, Frequency—Vol 1

Detectors, Standing Wave—See Vol 1

Detectors, Torque—See Indicators, Torque—Vol 1

Detectors, Ultraviolet—See Vol 1

Detectors, Vacuum—See Vol 1

Detectors,Vibration—See Transducers, Vibration—Vol 2

Detectors, Video—See Vol 1

Detectors, Voltage—See Vol 1

Detectors, Waveguide Arc—See Vol 1

Dewars—See Vol 1

Diagonal Cutters —See Wire Cutters, Hand Operated

Dial Locks—See Locks, Dial & Shaft—Vol 2

Dials, Instrument, Metal, Plastic, etc.—See Vol 2

Dials, Telephone-Type—See Vol 2

Dials, Turns-Counting—See Vol 2

eem CATALOG SECTION

Volume 3

passive components materials/hardware

This volume contains:

Section	Product	Starting Page
1400	Cabinets, Chassis, Containers, Racks, Boxes, etc.	2314
1500	Capacitors (All Types)	2330
1600	Chemicals (Acids, Adhesives, Coatings, Lubricants, etc.)	2478
1800	Coils (Inductors, Chokes), Assemblies, Forms	2481
2100	Connectors, Electrical (Receptacles, Sockets, Terminal Boards)	2510
2350	Delay Lines (All Types)	2728
2500	Fabricated Mechanical Parts (Bearings, Cores, Magnets, etc.)	2754
2600	Fans, Blowers & Cooling Equipment	2776
2800	Hardware, Non-Current Carrying (Fasteners, Washers, etc.)	2809
3100	Insulators, Insulating Materials & Parts	2810
3150	Manufacturing, Subcontracting, Custom Fabrication	2814
3200	Materials, Raw (Metals, Plastics, Glass, Rubber, Cloth, etc.)	2816
4700	Resistors, Fixed	2818
4750	Resistors, Variable (Potentiometers & Rheostats)	2902
5400	Tools (Hand & Power); Soldering Supplies	2933
5600	Transformers	2948
6000	Wire, Cable, Harnesses & Accessories	2994

eem consists of 3 volumes.

The contents of Volumes 1 and 2 are shown at right.

Volume 1

test instruments equipment and systems

Pages 1-988

Power Supplies
Communications
Microwave Systems
Telemetering
Audio
Test, Measuring and Recording
Environmental Test
Production Machinery
Computing, Data Handling and Accessories

Volume 2

active components circuit assemblies controls and drives

Pages 989-2008

Tubes
Amplifiers
Filters
Crystals
Microwave Components
Motors and Servo
Transducers
Semiconductor Devices
Integrated Circuits
Photoelectric and Optical
Relays and Switching Devices
Thermal Devices
Panel Components and Readouts

INDEX OF MANUFACTURERS' CATALOG PAGES

The EQUIPTO ENCLOSURE SYSTEM

A Proven Concept thru Functional Design!

The Equipto Enclosure System is a proven concept for housing electronic equipment and instrumentation with emphasis on ruggedness, modularity, function, and human engineering. Outstanding features make this System of Modular Cabinets the standard by which all others must be compared.

To ensure the flexibility, versatility, and functional advantage to be found in the use of Equipto Enclosures, the widest possible selection of Accessories such as Caster Bases, Caster Dollies, Drawers, Shelves, Turrets, and Laminated Plastic Tops is available to complement the Equipto Enclosure System.

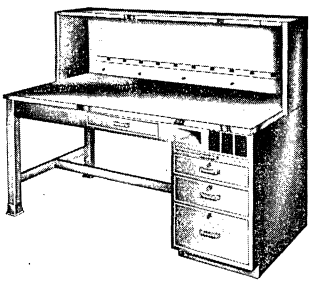
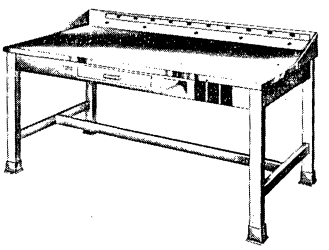
LABORATORY TEST FURNITURE

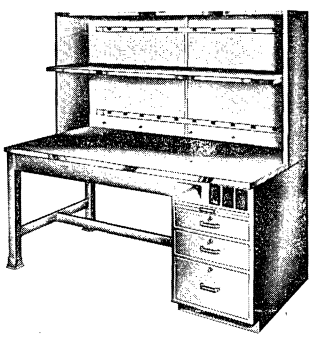
FOR

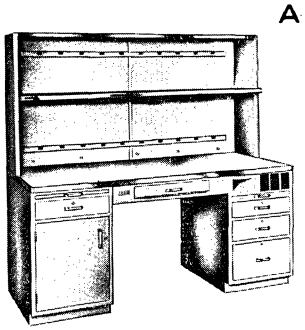
INDUSTRIAL • MILITARY • SCHOOL

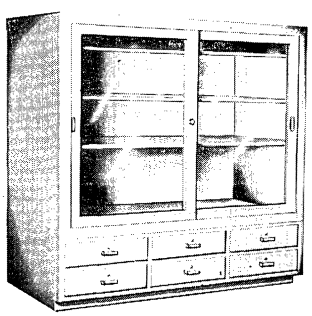
APPLICATIONS











Formica's sectional electronic test furniture is designed *by* engineers *for* engineers to provide the utmost in serviceability. Individual prefabricated sections are constructed to afford the greatest possible number of combinations, then factory assembled to suit the exact requirements of your laboratory or classroom. Design features also provide at least 50% more available working area over other types now in use. Made of heavy gauge furniture steel, Formica's rugged construction means many extra years of service even in hard use.

For school purposes, the unusual adaptability of Formica's many specialized turrets and pedestals — whether for single or double set-ups — is shown in part.

Write for brochures and further specifications.

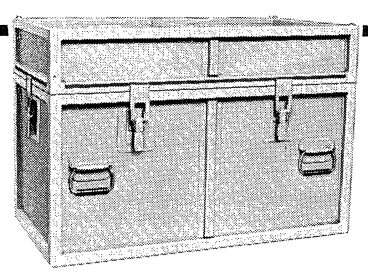
SEND FOR FREE CATALOG AND DIMENSION SPECIFICATION SHEETS

Reproducible vellums are included for customer convenience in detailing their special dimensions in cases and containers. Use of these vellums speeds up quotes.

Choose from over 1,000,000 variations in dimensions, proportions, metals, finishes and custom accessories. Whatever your need, the MM (multimeasure) method gives you high production savings even on custom runs as low as 25 units. Submersion proof construction, hinged inner lid for storage of instruction manuals and cables, with continuous flange for mounting a panel.

CUSTOM DETAILS

MOUNTING: Holes, brackets, flanges, anchor nuts, etc.
FOOTING: Rubber and aluminum feet, dimples, etc.
SHOCK PROOFING: Rubber pads, molded urethane cushions, vibration isolators, shock mounts, etc.
VENTILATING: Manual and automatic relief valves, louvres, perforations, vents, etc.
HINGING: Separable hinges, piano hinges, integral hinges
WATERPROOFING: Closure gaskets, humidity indicators, etc.
LOCKING: Latches, fasteners, locks, etc.
CARRYING: Handles, recessed handles, hand grips, etc.
IDENTIFYING: Stencilling, engraving, silk screens, nameplates.
FINISHING: Painting, iriditing, anodizing, plating, etc.



MODULAR METAL CONTAINERS

MIL-C-22443 (WEP)

A reuseable shipping and storage container system providing maximum component protection and dimensional variability with minimum weight and cubage. Used for: Weapons and Components • Ground Support Equipment • Communications Systems • Field Test Equipment • Radar Equipment • Storage and Transport.

Optima standard enclosures

We have over 14,000 standard enclosures at Optima. And we have a wider selection of finishes and color combinations than anybody in the industry. So, in effect, you can have an almost completely customized appearance at standard prices. There's a pretty good reason for all of this — Optima grew from the environment of the electronics industry. It was created specifically to design and manufacture enclosures for the instruments made by its parent company, Scientific-Atlanta. Our enclosures proved such unique, innovative solutions to our packaging problems that we offered them to the industry. Acceptance has been spectacular: we believe it's because there are no afterthoughts at Optima - because every feature of every enclosure meets a need and solves a problem. In fact, we've received awards for design excellence. These pictures show some of the reasons why . .☐Optima 17 - an elegant total package consisting of chassis and case in one compact, lightweight unit. ☐ The classic Optima Instrument Cases - 45 basic sizes for both 19" and 24" panel mounted instruments. ☐ Small Cases, the rackable little boxes in 25 shapes and sizes that offer amazing flexibility. ☐ Three basic styles of racks. They are handsome, lightweight and look better, last longer, and do more than anyone else's - because we don't cut corners on quality. ☐ Optima Consoles, a unique concept of "executive-look" instrument housing combining flexibility, generous counter & storage space, fine workmanship, and a high degree of human engineering.

CUSTOM DESIGN

If we haven't shown you enough, we also have a custom design service when one of our 14,000 standard enclosures won't do the trick. Our design staff can work out something that fits your requirements down to the last detail, no matter how large or small or intricate. OPTIMA - with the products and service to suit you. Give us a call.

Permanent Netic Tape Data Preservers

Prevent Magnetic Tape Degradation during Storage or Transportation

Rugged Netic Preservers minimize the possibility of such costly disaster and inconvenience. These Preservers are not only utilitarian, but also are considered as LOW COST INSURANCE. Their shielding qualities remain permanently effective because they are insensitive to ordinary shock, have minimal retentivity and never require periodic annealing. They are available in a great variety of sizes and shapes to fit your needs.

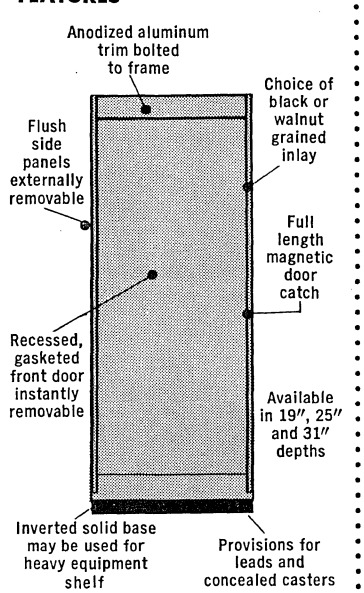
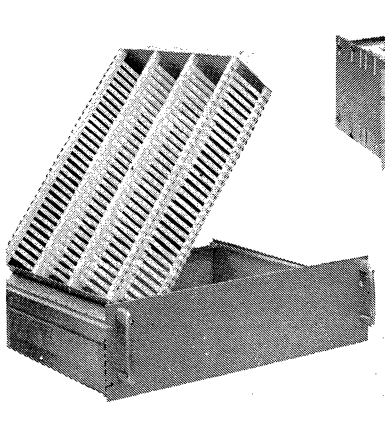
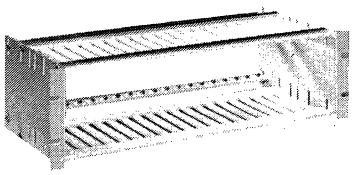
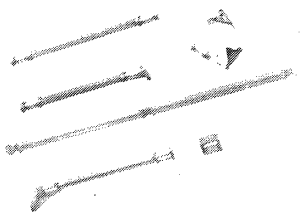
FEATURES



SCANBE PACKAGING HARDWARE

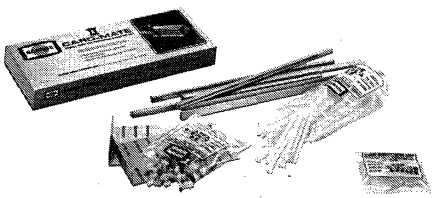




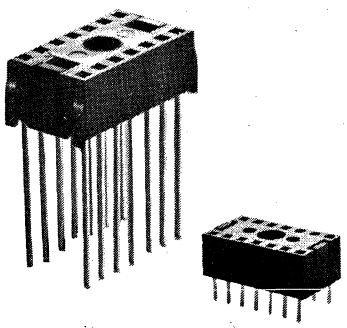


P.C. CARD PACKAGING HARDWARE

Every size, shape and configuration that's imaginable. Scanbe's packaging design engineers know how to get the job done and have the experience to prove it. We feature quality components, precise card and connector fits, and finished assemblies you will be proud of. If you are packaging P.C. cards please send for our 69 page catalog or give our application engineers a call.

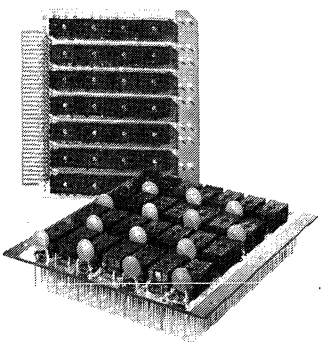


DUAL IN LINE SOCKETS
14 AND 16 PIN

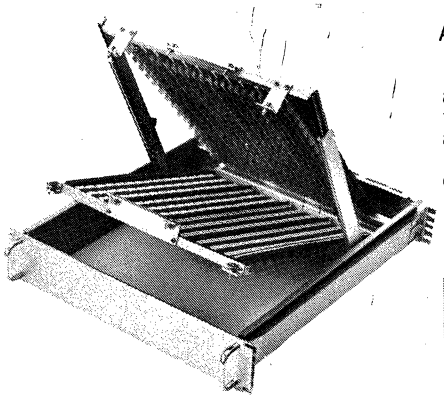


FEATURES: 3 LEVEL WIRE WRAP® • .025 SQUARE POSTS OR SOLDER TERMINALS • .100 x .300 PIN GRID • HIGH DENSITY P.C. BOARD MOUNTING • HIGH RELIABILITY WIPING CONTACTS • ACCEPTS FLAT OR ROUND LEAD PINS UP TO .022 DIAMETER • LOW CONTACT RESISTANCE • ANTI-CAPILLARY ACTION OF SOLDER • .020 SOLDER RELIEF • TWO PIECE BODY DESIGN • U.L. APPROVED GLASS FILLED NYLON • LATCHING CAP • EASY PIN REMOVAL • .275 LOW PROFILE BODY • TAPERED LEAD ENTRY • OPTIONAL SCREW MOUNTING • AND FOUR POST ANTI-ROCK FEATURE

®GARDNER DENVER

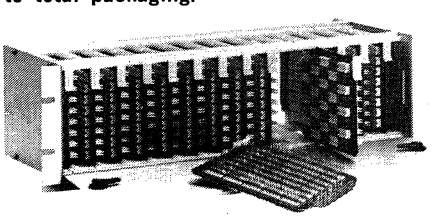


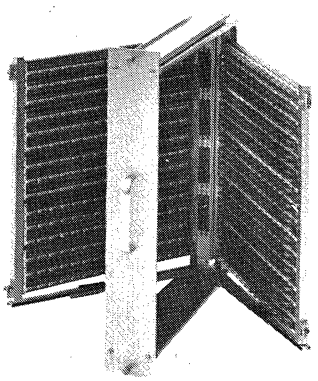
DI PAK™ DUAL INLINE PACKAGING HARDWARE



A complete hardware system for packaging of dual in-lines. Standard size carriers with DIP sockets are utilized in modular fashion to construct complete drawer assemblies in a variety of arrangements. Drawer configurations utilizing 14 and 16 pin sockets are available with up to 900 DIP's per assembly complete with I/O connector panels, power and ground planes and other hardware accessories.

Wrap Rack is an "off the shelf" P.C. Board approach to total packaging.





MICROMATICS™
A COMPLETE SOFTWARE AND "WRAP" WIRING SERVICE

Scanbe's standard programs are unmatched for sophistication and utility, and makes available complete software and automated wiring services including in-depth documentation.

Ask for our DI PAK Carrier catalog for details on a "total packaging system" which includes hardware, software and support services.

Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

to find manufacturers' catalog information

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

More than 6,000 manufacturers of electronic components, materials, instruments, assemblies, systems and key services are listed in the Yellow Section. An identical Yellow Section appears in each of the three volumes of **eem**, listing addresses, phone numbers and sales managers' names. TWX numbers are also included where available. **Boldface** listings indicate that detailed information on the manufacturers' products is cataloged in the White Section of **eem. Boldface** listings also indicate that local sales offices or representatives are listed for that manufacturer.

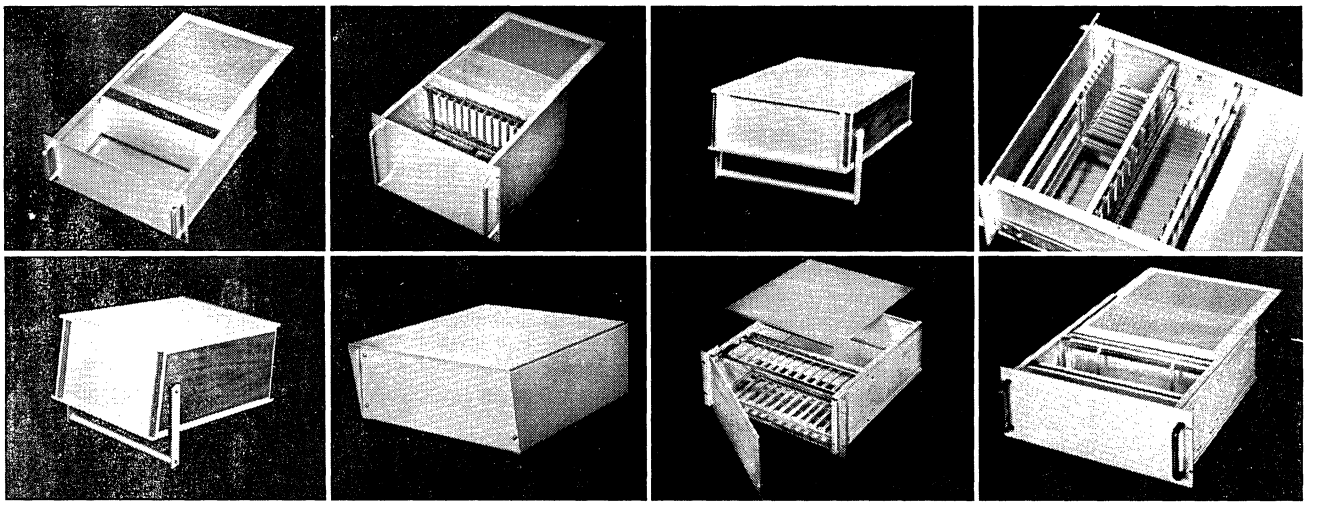
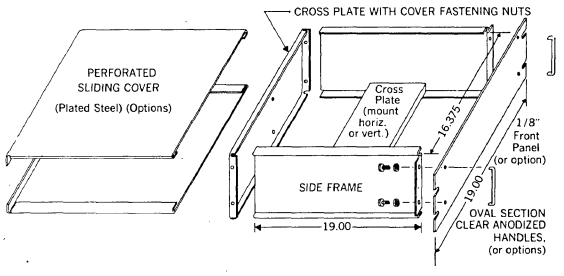
OMNICLOSURE™



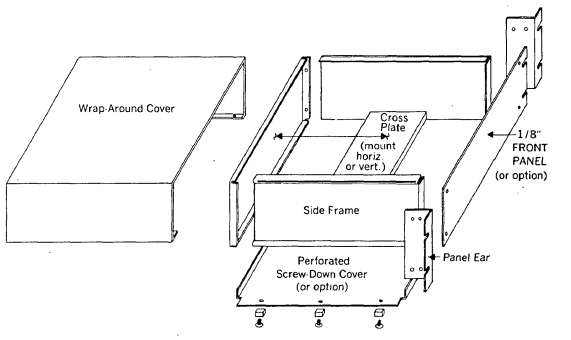
THESE ARE A FEW OF THE 4.5×10^7 CONFIGURATIONS THAT ASSEMBLE FROM OMNICLOSURE KITS AND PARTS STOCKED FOR IMMEDIATE DELIVERY ANYWHERE

PREFAB RACK-MOUNTING CHASSIS KITS AND PARTS



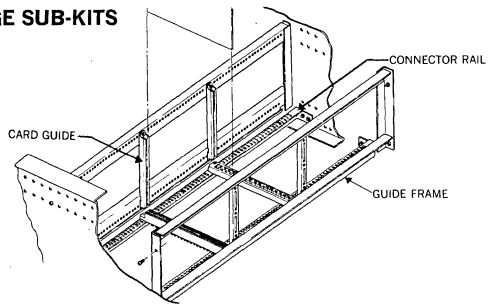
The original prefabricated chassis system. Combines breadboard flexibility, finished-product appearance, moderate prices, and immediate availability. Kits and parts stocked in six EIA heights. Features include choice of sliding or screw-down cover, and the Erector Set concept, which permits parts to be assembled in hundreds of different ways.

CONVERTIBLE BENCH/RACK KITS AND PARTS



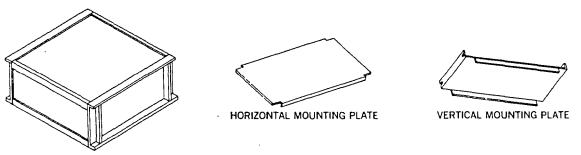
Similar to rack-mount units but self-enclosed and furnished with panel ears which detach for bench use and wrap-around cover which is removed when chassis is to be rack-mounted. Available with many options.

CARD CAGE SUB-KITS



Omniclosure rack-mounting and convertible chassis kits may be ordered with one, two or three row card cage sub-kits included. They assemble for top, front or rear access. Plastic snap-in guides eliminate time-consuming threading of guides and spacers, and permit changes to be made without disassembling the cage.

PORTABLE INSTRUMENT CABINET *Designed by Milton Sol Weiss—IDSA*



CLEAN, MODERN LOOK—Precision-framed front panel; no visible hardware on top, sides or front; choice of wood-grained vinyl trim; all aluminum clear anodized. BROAD RANGE OF SIZES—Eighteen stock sizes immediately available. ALL-ALUMINUM MODULAR CONSTRUCTION—Front, rear and sides are heavy extrusions. Sides grooved internally to accept printed circuit boards.

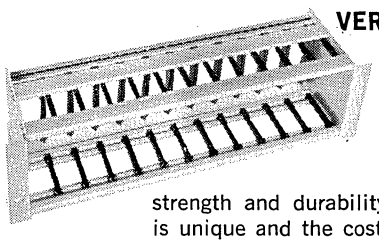
VEMALINE PRODUCTS COMPANY, INC.
WYCKOFF, NEW JERSEY / PHONE (201) 891-3200

NEW *Fast, Simple and Economical* COMPLETE PACKAGING SYSTEMS *From* VERO

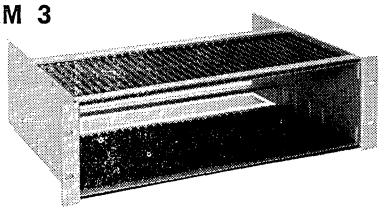
VERO INTRODUCES THE ULTIMATE PC CARD FRAMES • VERORACK SYSTEM 3

VERORACK SYSTEM 3



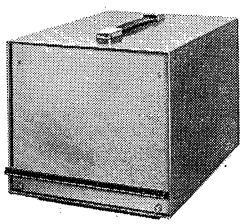
The ultimate PC card frame featuring variable card spacing from .4" up. This rack combines beauty, strength and durability. Connector mounting is unique and the cost is low.

VERORACK SYSTEM 3



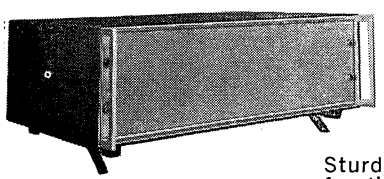
Features standard .5" card spacing with noryl guide slabs that slide with precision extrusions. This rack is versatile, rigid and low in assembly cost. It accepts cards any length and up to 4½" high in 5¼" frame. Other frame heights are also available.

VERO MODULE CASES



A line of Portable Module Cases has been designed for use in conjunction with standard modules from the Vero Module Rack. The cases are available in three heights, 5¼", 7" and 8¾" and in four standard widths, 4", 6", 8" and 16". Guides are included for Single or Multiple Module Mounting.

VERO INSTRUMENT CASE



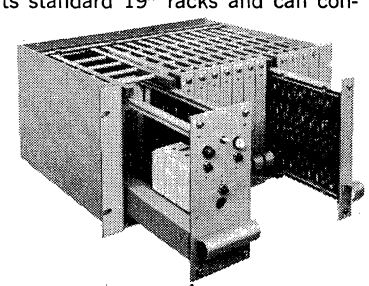
An attractive new range of of instrument cases available in heights from 3½" to 10½" to accept 19" wide racks. Sturdy construction and functional design are featured.

VERO MODULE RACK

OVER 450 ASSEMBLY COMBINATIONS — DELIVERY FROM STOCK — GREATEST FLEXIBILITY AT LOWEST COST

The Vero Module Assembly — another phase of the Vero circuit concept — provides a fast, simple and inexpensive method of circuit packaging.

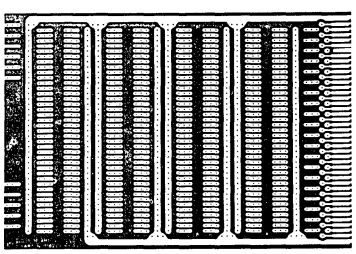
The Vero principle of versatile standardization has produced a module which fits standard 19" racks and can contain any combinations of 1", 2", 4", 8" or 16" pull out modules. It is available in 5¼", 7" or 8¾" heights and 11" or 14" depths.



This rugged ⅛" aluminum units is also available as a composite of modules and printed circuit cards for the ultimate in flexible circuit assembly.

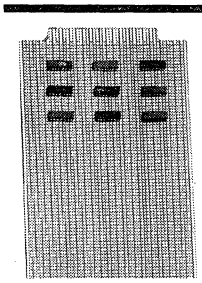
VERO D.I.P. BOARD

FOR DUAL IN-LINE I.C. PACKAGES



- .1 x .1 hole pattern with .041 dia. holes
- Accepts D.I.P. socket or direct I.C. plug in
- Gold plated contacts with connectors to match
- Boards available in epoxy glass 1/16 thick or low cost paper
- Complete versatility with continuous isolated pads on .1 centers holds 20 D.I.P.s on 4.5 x 6.5 board
- Power and ground buss plus test points all on one side of board
- Reverse side printed with grid to ease component location
- Vero handle location indicated

VEROBOARD*



Hole Patterns — .050 x .050, .1 x .1, .150 x .150, .156 x .1, .2 x .2, .2 x .1.

Over 200 Standard Sizes — Single and Double Sided x-y pattern.

Material — XXXP and FR-4 Epoxy Glass.

*Patented.

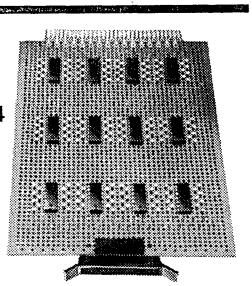
VERO "FINGER BOARDS"

Hole Patterns — .1 x .1, .052 dia.

Material — 1/16 Epoxy Glass, FR-4.

Connector Fingers — 22 x .156, 44 x .156, 40 x .1, 32 x .1, 80 x .1.

OFF THE SHELF IN SIZES TO FIT ALL CARD FILE SYSTEMS



COMPLETE RANGE OF CONNECTORS, TERMINAL PINS, MODULE CASES AND ACCESSORIES. BASIC VERO SYSTEMS CAN BE QUICKLY MODIFIED TO MEET CUSTOMER REQUIREMENTS.

with what we know about capacitors we could write a book...

so we did!

If you specify or buy capacitors you'll find the Aerovox Product Specifier for Electrical and Electronic Components the handiest thing that's come off the press since money. Between the covers we've included basic technical data, application data, Mil Spec and industry data along with detailed product information on multi-layer ceramic, paper, film, mica, oil filled, high voltage, SCR, EDC, feed-thru, disc and high voltage multiplier capacitors. In addition we have included technical information on our capabilities in thick and thin film microcircuits, RFI/EMI filters, and active and passive wave filters.

It's brand new, it's up-to-date and best of all . . . it's FREE for the asking. So if you specify and buy capacitors, filters, or microcircuits, you'll want your own personal copy of this all important Aerovox catalog. Your copy is waiting for you; write for one today or call your local Aerovox representative.

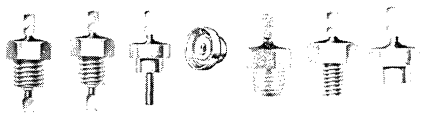
ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

Ceramic Disc Type Feed-Thru and Stand-Off Capacitors.



For complete information write for Publication 5409.

GENERAL SPECIFICATIONS

AMBIENT TEMPERATURE—
−55°C to +85° C

CORROSION RESISTANT AND NON-MAGNETIC—All metal parts including hardware are made of corrosion resistant non-magnetic materials which pass MIL-STD-202 salt spray tests.

PARALLEL RESONANCE—None of the feed-thru capacitor types will exhibit parallel resonance effects at frequencies of 1,000 MHz or less, regardless of capacitance value.

CAPACITANCE VALUES AND TOLERANCES (STANDARD)—470 pF ±20 percent and 1,000 pF GMV (−0, +100 percent).

(SPECIAL)—6.8 pF to 1,000 pF inclusive in EIA or MIL nominal values. Tolerances: ±10 percent, ±20 percent or GMV (−0, +100 percent) depending upon nominal capacitance value.

MAXIMUM CONTINUOUS WORKING VOLTAGE — 500 volts dc all types except uninsulated FW5N- 300 volts dc. Derate linearly from maximum rating at −85°C to 50 percent rating at +125°C, all types.

MAXIMUM DIELECTRIC WITHSTANDING VOLTAGE—1,250 volts dc for all types except uninsulated FW5N- 600 volts dc. Applied for 5 seconds, with surge current limited to 50 milliamperes maximum in all cases.

INSULATION RESISTANCE—More than 100,000 megohms at +25°C for all types and all values, after 2 minutes at maximum continuous working voltage.

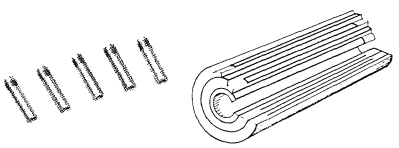
DISSIPATION FACTOR—Less than 2 percent at 1 KHz for all types and all values. "Q" more than 50.

STANDARD CONDITIONS—Unless otherwise specified, all measurements are understood to be made at normal atmospheric pressure; a relative humidity of 50 ±2 percent; an ambient temperature of +25° ±1°C; a frequency of 1 kHz; and 2.5 VRMS maximum.

MILITARY SPECIFICATIONS — Meet or exceed the applicable requirements of MIL-C-11015.

Multi-Layer Feed-Thru Capacitors–Type CL.

These feed-thru capacitors reflect Allen-Bradley's total capability in ceramic processing. Consisting of concentric layers of a proprietary ceramic formulation and noble metal electrodes, they are fired to produce true monolithic structures impervious to moisture and contamination. The concentric structure yields a low inductance when compared to conventional rolled dielectric capacitors. These non-polar capacitors are extremely small, light in weight, and have a high dielectric strength. Maximum operating temperature is 125°C, with no voltage derating. They are ideally suited for by-pass filtering, especially in connectors and filter-block assemblies.



For complete information write for Publication 5411.

GENERAL SPECIFICATIONS

VOLTAGE-TEMPERATURE CHARACTERISTICS—
+65 percent, −65 percent at 0 volts
+35 percent, −90 percent at rated voltage

DISSIPATION FACTOR—Maximum 4 percent at 0.1 VRMS, 25°C, 1 kHz.

TEMPERATURE RANGE —55°C to +125°C.

MINIMUM INSERTION LOSS IN dB* (Per MIL-STD-220)

Nominal Capacitance (In μF)	FREQUENCY						
	30 KHz	50 KHz	100 KHz	1 MHz	10 MHz	100 MHz	1 GHz
0.05	—	—	—	16	33	45	50
0.08	—	—	—	20	36	47	55
0.09	—	—	—	20	36	48	56
0.12	—	—	—	24	41	50	60
0.3	—	8	13	32	47	60	72
1.0	10	15	20	40	52	70	80

*At rated DCWV over the operating temperature range of -55°C to +125°C insertion loss is typically 6 dB less. For capacitance values other than the above, please contact your local Allen-Bradley representative.

PARAMETERS	TYPE DESIGNATION							
	CL001 DA503P	CL002 DA503P	CL003 DA903P	CL003 HA503P	CL004 HA124P	CL005 HA803P	CL006 BA304P	CL007 BA105M

Dielectric Withstanding Voltage; VDC, 1 sec., Charging Current <50 ma.	300	300	300	600	600	600	150	150
Minimum Insulation Resistance, megohms, at DCWV, 25°C, 2 min., Charging Current <50 ma.	10,000	10,000	5,500	10,000	4,000	6,000	1,200	700

Multi-Layer Feed-Thru Capacitors–Types MT and MS.

These new non-polar multi-layer Allen-Bradley capacitors are extremely small, light weight, and have high dielectric strength and reliability. Their concentric structure yields a low inductance when compared to conventional rolled dielectric capacitors. Maximum operating temperature is +125°C with no voltage derating. They are ideally suited for by-passing, filtering, and coupling.

For complete information write for Publication 5414.

ELECTRICAL CHARACTERISTICS

PARAMETER	TYPE	
	MT	MS

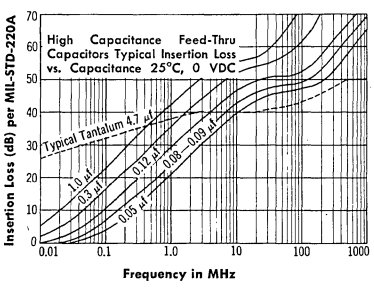
Operating Temperature Range	−55°C to +125°C	−55°C to +125°C
Minimum Insulation Resistance at DCWV, 25°C, with 2 minute charging current less than 50 milliamperes	500 ohm-Farad	500 ohm-Farad



Ceramic Chip Capacitors–Type MB.

Allen-Bradley Type MB ceramic chip capacitors are ideally suited for hybrid circuit design. Their small uniform size, convenient TC's, ease of bonding, and availability of numerous dielectric materials make them applicable for most thick and thin film applications. Range of the Type MB capacitor is 10.0 pF to 1.0 μF. They are available in standard EIA and MIL sizes and standard capacitance values. Temperature range is −55°C to +125°C. Standard voltage ratings are 50, 100, and 200 volts dc with no voltage derating over the temperature range. Capacitance tolerances are ±10 percent, ±20 percent, and GMV. The monolithic chips come in NPO (COG), stable (X7R), semi-stable (X7S), and Hi-K (X7U) materials. They are supplied with silver terminals, with an optional solder coat. Special sizes are available on request.

For complete information write for Publication 5415.

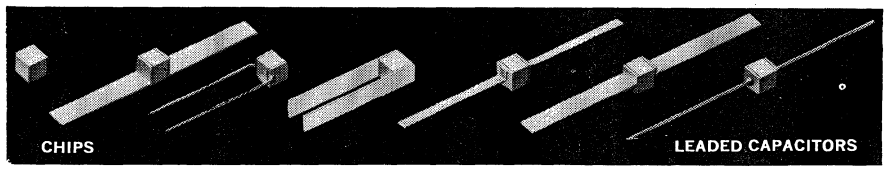
american technical ceramics

ATC UHF/MICROWAVE PORCELAIN



ATC UHF/MICROWAVE CHIP CAPACITORS

ATC-100 UHF/MICROWAVE PORCELAIN CHIP CAPACITORS

ATC Microwave Porcelain Capacitors are designed to advance the state-of-the-art in broadband, high power and low noise applications. Unique construction techniques provide ultra-high unloaded-Q (10,000 at 100 MHz in a 10 PF unit), with loss tangents lower than 0.0001, and self-resonance up to 15 GHz depending upon capacitor value and case type.

ATC 100 porcelain material exhibits no instability with voltage, time or frequency, contrary to common NPO and high dielectric-constant ceramics. There is no measurable piezoelectric effect, no aging, and no retrace hysteresis, or drift. Close tolerances of 1%, or better, are available, and unlike NPO's ATC Microwave porcelain retains a high insulation resistance at high temperatures. This material is specifically designed for use at high RF voltage and current all the way up through microwave frequencies. ATC-100 Case B is recommended for use up to 1 GHz, above which ATC-100 Case A is recommended.

Superior metallization, which prevents leaching off by soft solders, or epoxies, provides durable terminations under adverse soldering conditions. Other noble metals also available for special mounting, or with eutectics, or wire bonding. Special construction techniques provide extremely high packaging density with high reliability and high working voltage. Units are completely hermetically sealed by virtue of their basic construction, thus eliminating need for any encapsulant. Microwave porcelain is an extremely dense, low-loss material, impervious to penetration by atmospheric conditions or solvents. Exceptionally low inductance gives reliable wideband operation as a capacitor up to X-Band in capacitance values as large as 20 pF. Exceptionally close control over physical construction makes possible very high RF or DC voltage levels, plus low-loss, high power capability.

CHARACTERISTICS

UHF/MICROWAVE

INSERTION LOSS: Less than 0.03 dB @ 10 watts @ 1 GHz
QUALITY FACTORS: (Qu) Greater than 10,000 @ 100 MHz (10 PF)
GUARANTEED MINIMUM QUALITY FACTOR: @ 1 MHz = 10,000
SELF-RESONANT FREQUENCY: DC up to 20 GHz
VSWR: CASE B — 1.05:1 for typical non-ceramic substrates
CASE A — 1.1:1 for 25 Mil thick alumina substrates

S-PARAMETERS
Complete S-Parameter, VSWR, and Insertion Loss data is available, upon request, from 100 MHz through 3 GHz. Test data provided by a Hewlett Packard 8542A, computer controlled, synthesizer-referenced, phased-locked, network analyzer.

ELECTRICAL

TEMPERATURE RANGE: From —55°C to 125°C (no derating of working voltages)
From 125°C to 200°C derate linearly to 50% @ 200°C
TEMPERATURE COEFFICIENT OF CAPACITY: + 90 ± 20 PPM/°C (—55°C to 125°C) @ 1 MHz
CAPACITY RANGE, INSULATION RESISTANCE, AND OPERATING VOLTAGE (WVDC) BY CASE SIZE
CASE A: .1 PF to 100 PF (50 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
CASE B: .1 PF to 47 PF (1000 WVDC)*;
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
.1 PF to 100 PF (500 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
110 PF to 200 PF (300 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
220 PF to 470 PF (200 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
510 PF to 1000 PF (100 WVDC)
10^5 Megohms Min @ 25°C, 10^4 Megohms Min @ 125°C
*Special Order
DIELECTRIC TEST VOLTAGE: All units tested at 250% of WVDC rating for 5 secs.
RETRACE: Less than 0.1%
PIEZO ELECTRIC EFFECTS: None
CASE SIZE: A 50 mil cube
B 110 mil cube

ATC-700 ULTRA-STABLE CERAMIC CHIP CAPACITORS

ATC ultra-stable NPO ceramic is rated for extremely high stability with temperature (TC = 0 ± 30 PPM/°C). Environmental resistance approaches that of porcelain types, even without encapsulation. Composition and construction techniques provide moderately high Q at moderate cost. Especially useful for low frequency tuned circuits where high stability with temperature is required. Practical for low power handling (less than 2 watts) where X_c is less than 1. Ohm max. ATC-700 is 1/10 the size of conventional NPO capacitors of equivalent capacitance and voltage ratings.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, 47 PF to 470 PF;
CASE B, 200 PF to 4700 PF

TEMPERATURE COEFFICIENT OF CAPACITY: 0 ± 30 PPM/°C (—55°C to 125°C)

QUALITY FACTOR: 2000 @ 1 KHz

INSULATION RESISTANCE: 10^5 megohms min @ 25°C

ATC-200 HIGH PACKAGING DENSITY CERAMIC CHIP CAPACITORS

ATC-200 UHF ceramic is designed for by-passing applications where high packaging density is required with good insulation resistance, environmental resistance, and moderate temperature stability. Suitable for use through UHF frequencies in low power, DC block, applications.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, 510 PF to .01 MF
CASE B, 5000 PF to .1 MF
TEMPERATURE COEFFICIENT OF CAPACITY: (BX) ± 15% max. (—55°C to 125°C)
DISSIPATION FACTOR: 2.5% max @ 1 KHz
INSULATION RESISTANCE: 10,000 Megohms min
DIELECTRIC TEST VOLTAGE: 3 x Rated for 5 secs.

ATC-300 ULTRA-HIGH PACKAGING DENSITY CERAMIC CHIP CAPACITORS

The ATC-300 Series is designed to attain extremely high values of capacity in a minimal case size for use over a moderate temperature range. Values to .1 MF in a 50 Mil square (CASE A), and 1 MF in a 110 Mil square (CASE B) are standard.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, .012 MF to .1 MF
CASE B, .12 MF to 1.0 MF
TEMPERATURE COEFFICIENT OF CAPACITY: Room temperature peak
DISSIPATION FACTOR: 4% max @ 1 KHz
INSULATION RESISTANCE: 1000 megohms min
DIELECTRIC TEST VOLTAGE: 3 x Rated for 5 secs.

AND CERAMIC CHIP CAPACITORS

ORDERING CODE

ATC-100 B 10 1 J C

- Type — ATC-100
- Case — B
- First Two Digits Of Capacitance — 10
- Number of Zeros Following Digits Of Capacitance — 1
- Tolerance — J
- Chip — C

THE ABOVE EXAMPLE DESIGNATES ATC-100 SERIES CASE B CHIP CAPACITOR OF 100 PF WITH A 5% TOLERANCE.

TYPICAL POWER HANDLING

1 KW CW at 3 GHz in an ATC-100 CASE B 62 PF.

20 amperes CW at 25 MHz in an ATC-100 CASE B 1000 PF.

14 KVA in an ATC-100 CASE B, 30 PF unit @ 170 MHz.

70 amperes of pulsed RF at 500 MHz.

VSWR often less than 1.1:1 and Insertion Loss .05 dB up to several GHz in an ATC-100 CASE A 33 PF capacitor on 25 mil thick alumina substrate with a 25 mil wide line.

Typical series RF resistance of .05 ohms (compared to Barium Titinate types which may have up to 2.0 ohms for the same capacitance value).

THIS RESULTS IN EXTRAORDINARILY LOW INSERTION LOSS, WHICH IS ESPECIALLY CRITICAL WHERE IMPEDANCES TO BE MATCHED ARE LOW, SUCH AS THE BASE-TO-EMITTER JUNCTION AND AT FREQUENCIES WHERE TRANSISTOR GAINS ARE LOW AND LOSS CANNOT BE TOLERATED.

ELECTRICAL

MILITARY SPECIFICATION: All ATC-100 capacitors meet MIL-C-11272B (Complete independent Test Data sent upon request.)

CAPACITANCE DRIFT: 0.05% or 0.05 PF, whichever is greater

AGING: None

ELECTRICAL CHARACTERISTICS AFTER LIFE TEST

CHANGE IN CAPACITANCE: At 25°C —0.1% max

QUALITY FACTOR: Greater than 10,000 @ 1 MHz

INSULATION RESISTANCE: 1,000,000 megohms min @ 25°C, 100,000 megohms min @ 125°C (for 100 WVDC units, 10^5 Meg Ω @ 25°C, and 10^4 Meg Ω @ 125°C)

TOLERANCES AVAILABLE:

B (± .1 PF) from .1 PF to 9.1 PF,
C (± .25 PF) from .3 PF to 9.1 PF,
D (± .5 PF) from .5 PF to 6.2 PF,
F (± 1%) from 10 PF to 1000 PF,
G (± 2%) from 10 PF to 1000 PF,
J (± 5%) and K (± 10%) from 6.8 PF to 1000 PF,
M (± 20%) from 6.8 PF to 1000 PF

APPLICATIONS

PRODUCT

Phased-array radar, wide-band amplifiers, low noise circuits, receiver RF-IF stages, proximity fuses, radiosonde, microwave power sources, UHF converters, military communications, telemetry, UHF mobile, ECM, DME, microwave power amplifiers, troposcatter communications; commercial aircraft communications; military, marine, and amateur AM/FM/SSB, military hand-held survival radios.

CIRCUIT

Constant-capacitance matching and coupling in octave bandwidth microstrip and stripline L and S-Band amplifiers, swept L.O.'s, mixers, synthesizers, and switches.

Low-loss signal paths for low noise receivers.

Coupling and by-passing for low and high power UHF transmitters.

Excellent first base-shunt elements in low-pass Matthaei wideband interstages.

Utilization in base and emitter by-passing, as well as coupling applications, where extremely low inductance is required.

Applications in ultra-stable oscillator sources where absolute retrace and minimal drift (less than .1%), as well as low inductance, are an important factor, particularly over environmental extremes.

Use in RF tank circuits where high circulating currents or where stability and Q are important factors. Use in timing and control circuits demanding high stability under extreme environmental conditions.

High Q DC blocks in wideband varactor-tuned sweepers.

Compact stable elements for use in low-distortion and narrow pulse width, high PRF delay lines.

Low and high values of capacity where close tolerances and high stability are required in HF and VHF filter design. (See ATC-100 Capacity Values)

Single-replacement for multiple-capacitor collector and base by-passes.

Pellet styles for input-matching and pseudo-idler circuits of high-ratio step-recovery multipliers.

Where state-of-the-art high Q capacity -vs-size microminiaturization is required.

DIELECTRIC TEST VOLTAGE: 3 x Rated 5 secs.
WORKING VOLTAGE: 50 WVDC
TOLERANCES AVAILABLE: F (± 1%), G (± 2%), J (± 5%), K (±10%), M (± 20%)

GENERAL

Similar to ATC-100, except for restriction to power levels and lower frequency applications where higher loss can be tolerated. Not to be used at low impedance levels having high current, or where low noise, low loss, or low power dissipation is required.

WORKING VOLTAGE: 50 WVDC
VOLUMETRIC EFFICIENCY: 100 MFDS/Cu. inch
TOLERANCES AVAILABLE: K (10%), M (20%), N (30%), GMV (—20%, +80%)
RECOMMENDED TESTING SEQUENCE: CAP., DF., IR., V.D.C.
MILITARY SPECIFICATION: Meets applicable portions of MIL-C-11015D

GENERAL

Coupling and by-passing for low power, UHF transmitters and receivers. Applications requiring low inductance, high capacity per unit volume with moderate temperature stability, such as tantalum replacements and emitter by-passes.

CIRCUIT

RF by-pass for C_{ob} cancelling inductor.

WORKING VOLTAGE: 25 WVDC
RECOMMENDED OPERATING RANGE: 10°C to 60°C
VOLUMETRIC EFFICIENCY: 1000 MFDS/Cu. inch
TOLERANCES AVAILABLE: M (± 20%), N (± 30%), GMV (—20%, +80%
RECOMMENDED TESTING SEQUENCE: CAP., DF., IR., V.D.C.

GENERAL

Similar to ATC-200, except for use over a moderate temperature range such as encountered in computers, heart pacers, medical electronics, etc.

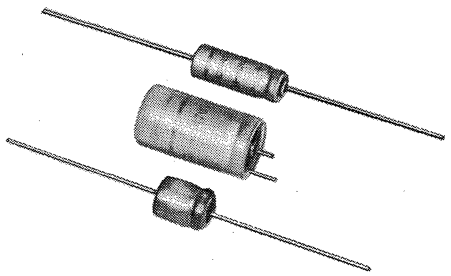
Amperex ELECTROLYTIC Capacitors



Amperex high quality, low cost electrolytic capacitors feature small size, high capacitance and long service life. Low leakage currents are achieved through the use of highly purified materials and carefully controlled manufacturing processes. They are the "dry" type with the liquid electrolyte absorbed into a layer of paper between cathode and anode foils. Winding is sealed in an aluminum can.

They are designed to operate at varied efficiencies over a temperature range of −40°C to +85°C. The minimum and maximum temperatures depend on the application . . . increase of impedance and losses are the limiting factors.

Amperex FIXED-FILM DIELECTRIC Capacitors

METALLIZED POLYCARBONATE

Metallized polycarbonate capacitors offer 125°C operation with no voltage de-rating, extreme capacitance stability with temperature, and low dissipation factor. High insulation resistance coupled with small physical size make these capacitors ideally suited for the most critical applications. Available in 100 VDC, 400 VDC, and 630 VDC.

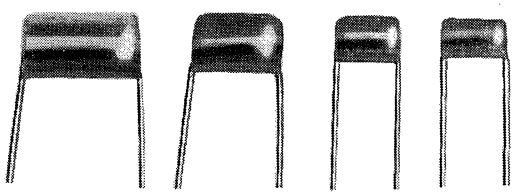
METALLIZED POLYESTER

Available in 250 VDC rating from .001 mfd to 2.2 mfd. Offer small size and cost advantages and are suitable for all general purpose applications.

C280 SERIES

The Amperex C280 Series Flat Film Capacitors are intended for use with printed circuit wiring and are suitable for tube as well as transistorized circuitry. These capacitors are available in three voltage ratings: 250 VDC, 400 VDC, and 630 VDC. Short-time overloading is permited with these components. Cap. Tol. ±10% or ±20%.

Dielectrics used with each voltage series are: 250V — metallized polyester; 400V — metallized polycarbonate; 630V — metallized polycarbonate.



Type	Voltage	Dielectric	Capacitance Range	Thickness	Width	Height
C280AE	250V	metallized polyester	0.01 μf to 2.2 μf	0.157 to 0.512	0.492 to 1.18	0.443 to 0.886
C280CF	400V	metallized polycarbonate	0.01 μf to 1.0 μf	0.157 to 0.512	0.492 to 1.18	0.433 to 0.906
C280CG	630V	metallized polycarbonate	0.01 μf to 0.47 μf	0.177 to 0.532	0.492 to 1.18	0.453 to 0.925

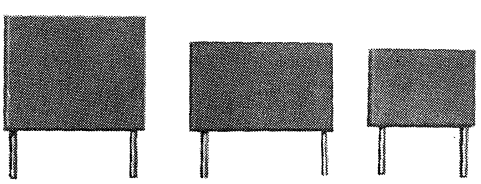
C280M SERIES

Amperex metallized film capacitors are designed for tube or transistor printed circuit applications. Their flat rectangular shape ensures stable mounting on printed circuit boards. The size of these capacitors makes them extremely useful in the miniaturized components field.

These capacitors are available in four voltage ratings: 100 VDC, 250 VDC, 400 VDC, and 630 VDC.

Metallized polyester is the dielectric used with the 250 volt series, while metallized polycarbonate is used in the 100, 400, and 630 volt series.

Their technical characteristics are visibly marked on top of the capacitor's body in durable embossed printing.



Type	Voltage (VDC)	Dielectric	Capacitance Range (μf)	DIMENSIONS IN INCHES

C281 SERIES

This new compact capacitor offers a superior film quality in every respect and is used to replace paper capacitors in quality equipment. They can withstand overload and are insensitive to adverse environmental conditions.

The Amperex C281 series was designed primarily for use as general purpose capacitors in the entertainment and industrial field. In addition, their high permissible AC voltages make them ideally suitable as an anti-interference capacitor in small electrical appliances. Their rectangular shape ensures wobble-free mounting on PC boards in either the vertical or horizontal position.

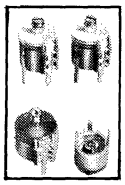
Amperex Variable Capacitors

FILM DIELECTRIC TRIMMERS



C010 and HT10 Series

Amperex Film Dielectric Trimmers are state-of-the-art with regard to dielectrics used and construction. The excellent characteristics of polyethylene and PTFE films now also are available for trimmer applications. A few advantages of Film Dielectric Trimmers are:

- excellent adjustment accuracy
- limited program covers wide trimming range
- new constructional concept achieves attractive dimensions with corresponding space savings
- reduced cost

2222 — 809 — 050/070 Series

These capacitors have been designed for use in miniaturized measuring and telecommunication equipment. Four types are available: single-stator (6 x 8 mm), single-stator (11 x 14 mm), split-stator (11 x 14 mm), and differential trimmers (11 x 14 mm). Single-stator trimmers are suitable for fine adjustment of h.f. tuned circuits, split-stator trimmers for symmetrically built h.f. circuits, and differential types for capacitive volume or voltage control.

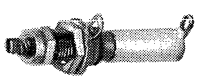
TUBULAR CERAMIC TRIMMERS

2222 — 802 — 20011/15 Series

These capacitors have been designed for the precision trimming of industrial equipment which operates at the higher frequencies. Their simple form of construction guarantees high reliability and facilitates, moreover, a high breakdown voltage, good stability and high adjustment accuracy. For many applications the negative temperature coefficient characteristics results in adequate compensation at various temperatures. The small dimensions contribute to the miniaturization of electronic equipment.



Technical Specifications

Catalog Number 2222 ⅈ 802	Capacitance Swing (pF)	Zero Capacitance (pF)	Temp. Coeff. (10-6/°C)	Working Voltage
20011	≥ 3	≤0.5	— 10± 60	500 VDC
20012	≥4.5	≤0.6	— 10± 60	500 VDC
20013	≥ 6	≤0.7	— 10± 60	500 VDC
20014	≥ 9	≤0.9	—250±250	500 VDC
20015	≥ 12	≤1.0	—250±250	500 VDC

C004 Series

Specifically designed for UHF applications in radio and TV receivers. Their negative temperature coefficient provides a favorable compensation at varying temperature conditions. Excellent quality level is maintained by a high degree of production mechanization. Available in three standard and one miniature dimension style which provide economical means of meeting the most accepted mounting techniques used in the radio and TV industry. The basic trimmer design consists of an internally-ground ceramic tube matched to a threaded invar rotor spindle; both ends are slotted for screwdriver adjustment.

Technical Specifications

1. Standard Dimension Styles
   Capacitance Range: 3 pf to 12 pf
   Temp. Coef.: —200 ± 200 PPM/degC
   Working Voltage: 500 VDC
2. Miniature Dimension Style
   Capacitance Range: 3 pf and 6 pf
   Temp. Coef.: —200 ± 200 PPM/°C (3pf)
   to —300 ± 200 PPM/°C (6pf)
   Working Voltage: 400 VDC

2222 — 802 — 20001/5 Series

These capacitors have been designed for the precision trimming of industrial equipment which operate at the higher frequencies. Their simple form of construction guarantees high reliability and facilitates, moreover, a high breakdown voltage, good stability and high adjustment accuracy. For many applications the negative temperature coefficient characteristic results in adequate compensation of various temperatures. The small dimensions contribute to the miniaturization of electronic equipment.

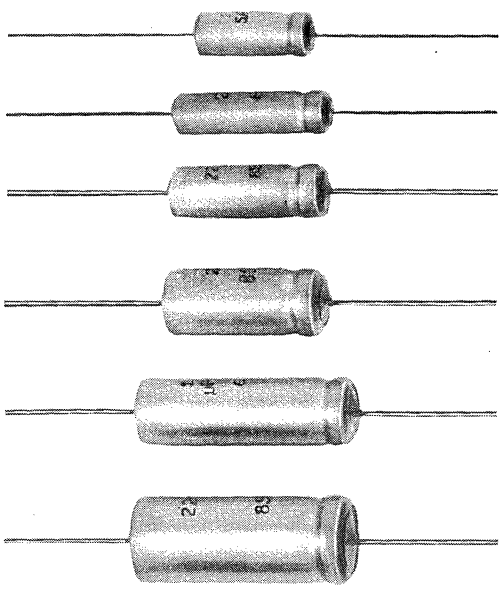
Amperex SOLID ELECTROLYTE ALUMINUM FOIL Capacitors



Amperex patented solid electrolyte aluminum foil capacitors fill the gap between dry aluminum and tantalum electrolytics in circuitry requiring long life, high reliability and stability over a wide temperature range. The electrolyte, manganese dioxide, a solid semiconductor, is carried in glass fiber between two foils of etched aluminum. Since no liquid is used there can be no loss of electrolyte by evaporation at high temperature; the electrical characteristics of manganese dioxide are extremely stable with changes in temperature.

An aluminum case with a ceramic disc seal provides mechanical strength.

Solid electrolyte aluminum foil capacitors offer very high reliability; failure rates are less than 0.01% per 1000 hours at 85°C and at maximum operating voltage.

Extended shelf storage has no effect on performance since there is no tendency for the dielectric film to dissolve when no voltage is applied.

Unlike tantalum electrolytic capacitors, these devices tolerate, for short durations, reverse voltages up to the rated voltage, resulting in high ripple current ratings. There is no limitation on the magnitude of the discharge current.

Amperex solid electrolyte aluminum foil capacitors operate with only small changes in characteristics from −80°C to +125°C.

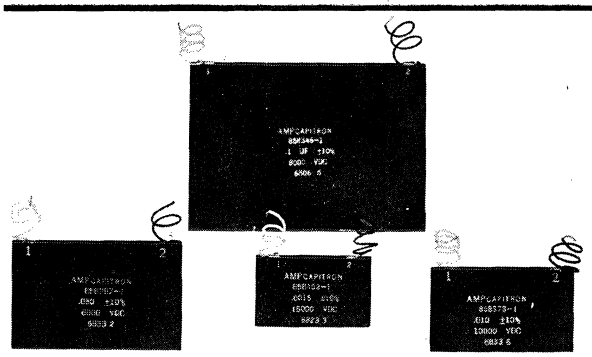
AMPLIFILM★ HIGH VOLTAGE CAPACITORS 2,500 to 60,000 VDC

INDUSTRIAL • MILITARY • COMMERCIAL

The CAPITRON★ Division of AMP Incorporated has specialized in the development of a diversified line of high voltage capacitors that provide outstanding performance characteristics. AMPLIFILM dielectric capacitors feature monolithic construction which results in substantial size and weight reduction, making them particularly suitable for use in high voltage power supplies, modulators, pulse forming networks, etc. AMPLIFILM capacitors, custom or stock, are designed to your exacting requirements as to size, shape and performance.

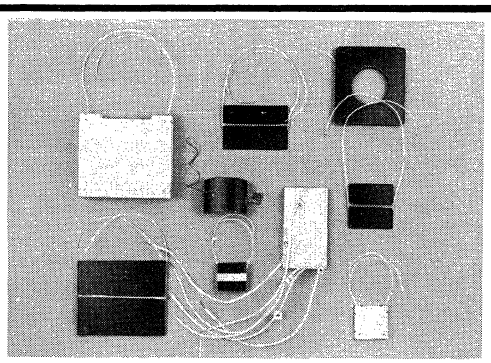


AMPLIFILM★

WAFER CAPACITORS FOR TEMPERATURES UP TO 125° C

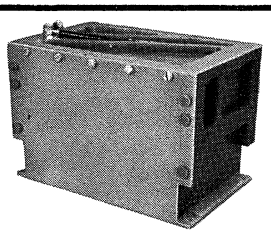
The basic element in these capacitors is AMP's AMPLIFILM dielectric, interleaved with copper foils and bonded with a non-polar thermoplastic resin specially selected for its excellent dielectric qualities. Heavy gage foil and molded construction combine to make these components ideal for rugged high voltage oil-filled or encapsulated assemblies.

- Operating temperature: −55° C to +125° C
- Capacitance range: 100 $\mu\mu$f to 1.0 μf
- Voltage range: 2,500 to 60,000 volts DC
- Power factor: 0.5% max.
- High insulation resistance
- Conforms to MIL-C-19978 where applicable
- Moisture resistant
- Very low dielectric absorption: less than 0.2%
- Wafer sizes from 1 sq. in. to 36 sq. in.
- Many configurations available



Configuration variety of AMPLIFILM ★ wafers

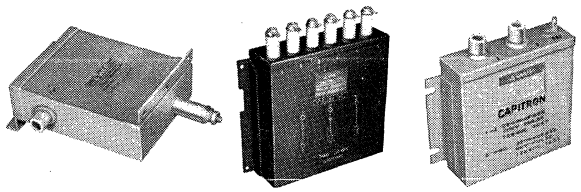
For complete information write for 858 Series AMPLIFILM capacitor catalog.



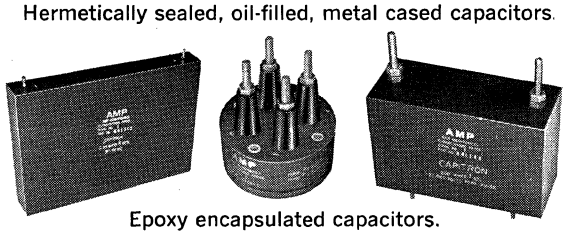
A typical AMPLIFILM capacitor assembly. Even **before encapsulation,** the exclusive dielectric construction provides moisture resistance meeting MIL-STD-202 (Method 106), making possible an energy efficiency greater than 0.6 joules per cubic inch without the encumbrance of a metal case.

- Capacitance: 0.1 μf ± 5%
- Voltage rating: 40,000 volts DC
- Power factor: 0.5% max.
- Temperature Range: −55° C to +100° C
- Size: 4½" x 4½" x 6½" max. (exclusive of frame)
- Weight: 9½ lbs. (exclusive of frame)

CUSTOM-PACKAGED AMPLIFILM HIGH VOLTAGE CAPACITORS



Hermetically sealed, oil-filled, metal cased capacitors.



Epoxy encapsulated capacitors.

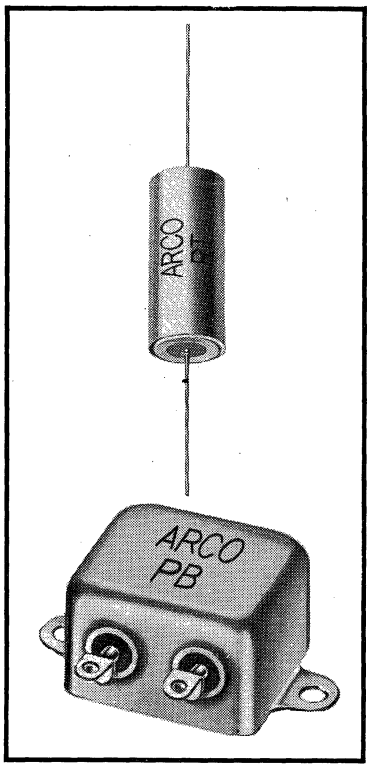
precision polystyrene capacitors



for military applications and hostile environments

type PT, CT and ST tubular

type PB, CB and SB rectangular bathtub cans

hermetically-sealed — metal case

Design innovations and extreme care in production have enabled ARCO to approach the optimum performance characteristics of the polystyrene film. These capacitors will exceed all performance requirements of MIL-C-19978 under ALL ENVIRONMENTAL CONDITIONS specified therein. ARCO polystyrene capacitors were specifically designed for the most critical applications where requirements for extremely high insulation resistance, high Q, extraordinary stability, close tolerance, and low dielectric absorption and dissipation factor are mandatory. These capacitors are intended primarily for use in ANALOG and DIGITAL COMPUTERS, CALCULATORS, HIGH Q TUNED CIRCUITS, INTEGRATORS, PRECISION FILTER CIRCUITS, PULSE NETWORKS, SERVO SYSTEMS, and as REFERENCE CAPACITORS.

specifications

DISSIPATION FACTOR: When measured at or referred to 1kHz the dissipation factor shall not exceed the following
.0001 at 23°C
.0002 at 85°C

INSULATION RESISTANCE: Insulation resistance when measured at the applicable test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^6	1.5×10^5
except the insulation resistance in megohms need not exceed	10^8	10^6

*NOTE: verified on 100% of production

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 0.05% over the entire operating temperature range.

OPERATING TEMPERATURE RANGE: The ARCO capacitor types listed can be used for continuous operation from −55°C to +85°C without derating. Transient exposure to +95°C will have NO DELETERIOUS effect.

TEMPERATURE COEFFICIENT: The following temperature coefficient variants are available —
Type PT & PB negative 120 ±15 PPM/°C
Type ST & SB negative 120 ±15 PPM/°C
Type CT & CB negative 175 ±15 PPM/°C

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed the following limits for the types listed.
Type PT & PB ±0.1%
Type CT & CB ±0.1%
Type ST & SB ±0.05%

VOLTAGE RATING: All ARCO capacitors are available in 100, 200, 400, 600 and 1,000 Volts DC ratings. Special voltages can be supplied upon request or to specification.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: All ARCO precision polystyrene capacitor types here listed are hermetically sealed in metal cases with compression glass-to-metal, solder-sealed terminals. They are wound with a SOLID CORE in the center for optimum stability, and are terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance and exhibiting complete FREEDOM FROM MICROPHONISM.

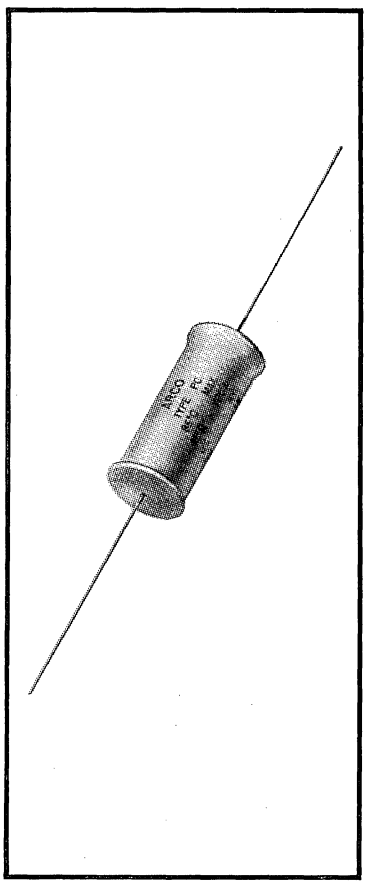
precision polystyrene capacitors



superior environmental protection at low cost—smallest size

type PC & PJ tubular
type SC & SJ tubular

The unique design of Arco Type PC capacitors provides physical and electrical stability, ruggedness and strength of termination, and excellent uniformity in production. All these features enable tight control of the narrow specification limits published. Type PC offers the smallest, lowest cost construction available, while retaining optimum performance characteristics.

The Type PC enclosure provides unusual protection against moisture, solvents and inadvertent contact with a soldering iron. The rugged, heat resistant jacket material makes Type PC particularly suited to printed circuit dip-solder assemblies subject to solvent cleaning and also to densely packed component structures where there is danger of damage to adjacent units while making solder connections.

Extensive evaluation has confirmed the excellent moisture resistance of the type PC (surpassed only by metal cased enclosures) and its conformance to the most stringent shock and vibration specifications. Type PC capacitors are exceptionally well suited for PRECISION FILTERS, DELAY LINES, and PRECISION TIMING CIRCUITS, where small size and excellence of performance are mandatory at LOW COST.

specifications (See Page 2340 for Electrical Characteristics)

CONSTRUCTION: The ARCO precision polystyrene capacitors types PC & SC are encased in an irradiated polyolefin jacket sealed with bonded silicone rubber. Types PJ & SJ are encased in a silicone treated fused polystyrene jacket. This unique construction economically protects the excellent electrical characteristics exhibited in types PC and SC and is primarily intended for use where they will not be subjected to the following hazards:

1. Physical damage due to excessive heat during dip or flow solder assembly.
2. Solvent damage during cleaning operations
3. Exposure to excessive humidity for prolonged periods of time.

All types herein listed are wound with a SOLID CORE in the center for optimum stability, and are terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance and exhibiting complete FREEDOM FROM MICROPHONISM.

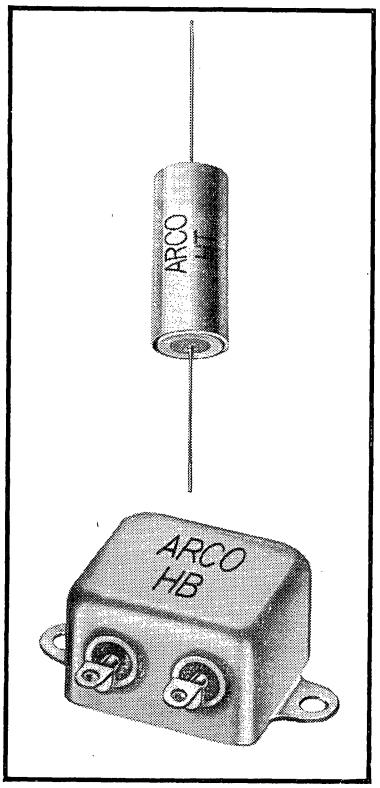
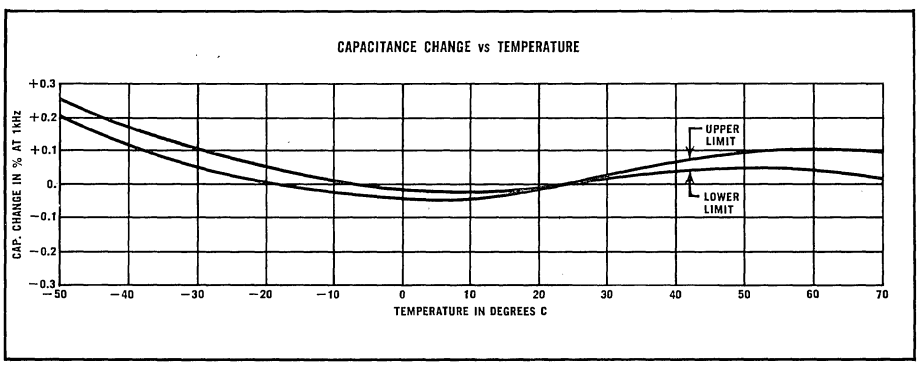
modified polystyrene capacitors



temperature-stable
small size
type HT tubular
type HB rectangular bathtub cans
hermetically sealed — metal case

An exclusive ARCO design modifying the temperature characteristics of the dielectric film to provide capacitors insensitive to temperature changes (±0.1% change to 85°C). Type HT and HB capacitors will meet ALL ENVIRONMENTAL REQUIREMENTS OF MIL-C-19978.

ARCO Type HT and HB capacitors are specifically designed for INTEGRATORS, PRECISION TIMING CIRCUITS, and PRECISION RC NETWORKS.



specifications

DISSIPATION FACTOR: When measured at or referred to 1kHz the dissipation factor shall not exceed 0.002 at 23°C

INSULATION RESISTANCE: Insulation resistance when measured at the applicable test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^6	1.5×10^5
except the insulation resistance in megohms need not exceed	10^8	10^6

*NOTE: verified on 100% of production

OPERATING TEMPERATURE RANGE: The ARCO capacitor types listed can be used for continuous operation from −55°C to +85°C without derating. Transient exposure to +95°C will have NO DELETERIOUS effect.

TEMPERATURE COEFFICIENT: The temperature coefficient of ARCO type HT and HB capacitors is controlled so that the variation of capacitance from room temperature to 85°C. is less than ±0.1%; from room temperature to −55°C. variation is less than ±0.25%. Tighter control is available to special order (±0.05% from 10°C to 50°C).

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 0.05% over the entire operating temperature range.

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed ±0.1%.

VOLTAGE RATING: ARCO type HT and HB capacitors are produced in 100 Volt DC rating. Other voltages to 1,000 volts can be supplied upon request.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: ARCO type HT and HB capacitors are hermetically sealed in metal cases with compression glass-to-metal, solder-sealed terminals. polystyrene and mica precision capacitors

zero temperature coefficient

type KT tubular

type KB rectangular bathtub cans

hermetically sealed — metal case

type KE flat epoxy encapsulated

A unique combination of Polystyrene and Mica dielectrics resulting in a capacitor offering a truly ZERO TEMPERATURE COEFFICIENT (±10 ppm/°C from −55°C to +85°C standard production) with the ultimate in long term STABILITY. Type KT and KB capacitors will meet or exceed all requirements of MIL-C-19978, where applicable, under ALL ENVIRONMENTAL CONDITIONS specified therein.

ARCO Type KT, KB, and KE capacitors provide the utmost in performance for PRECISION-OSCILLATORS, TIMING CIRCUITS, and RC NETWORKS.

specifications

DISSIPATION FACTOR: When measured at or referred to 1kHz the dissipation factor shall not exceed the following
.001 @ 23°C

INSULATION RESISTANCE: Insulation resistance when measured at the applicable test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^5	10^3
except the insulation resistance in megohms need not exceed	10^6	10^4

***NOTE:** verified on 100% of production

OPERATING TEMPERATURE RANGE: The ARCO capacitor types listed can be used for continuous operation from −55°C to +85°C without derating. Transient exposure to +95°C will have NO DELETERIOUS effect.

TEMPERATURE COEFFICIENT: The temperature coefficient of Arco Type KT, KB, and KE capacitors is truly zero, they are usually produced to a tolerance of ±10 ppm/°C. They can also be produced to zero ±5 ppm°/C. The linearity of the temperature coefficient regardless of tolerance is ±1 ppm/°C. Other temperature coefficient centers may be supplied within the range of −100 to +20 ppm/°C THE TEMPERATURE COEFFICIENT OF THESE CAPACITORS **is tested on a 100% basis.** Data verifying these tests can be supplied at NO EXTRA COST as requested.

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 1.0% over the entire operating temperature range.

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed ±0.05%.

VOLTAGE RATING: Arco Type KT, KB, and KE capacitors are available in 100, 200, and 400 volts DC ratings (all supplied in the same case size). Other voltages up to 1,000 volts can be supplied upon request.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: The Arco Type KT, KB, and KE capacitors are constructed by a unique combination of polystyrene dielectric sections with a linear negative temperature coefficient cross compensating a mica dielectric capacitor section with a linear positive TC. The polystyrene capacitor section is wound with a SOLID CORE in the center for optimum stability, and is terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance. The mica capacitor section is the well known Arco-Elmenco capacitor exhibiting highest reliability and performance characteristics. The individual capacitor sections as well as their combination have been constructed so as to guarantee all performance characteristics listed as well as complete FREEDOM FROM MICROPHONISM.

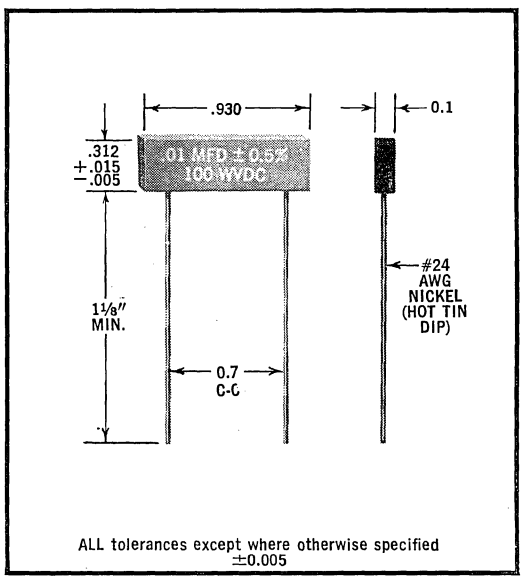
polystyrene capacitors



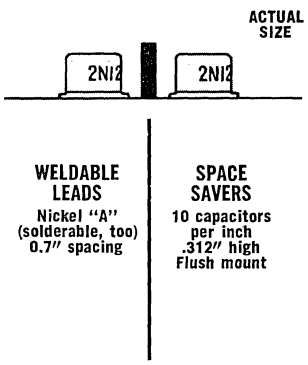
ALL tolerances except where otherwise specified ±0.005

type PE

Arco PFC Division announces availability of a new polystyrene dielectric capacitor with a thin configuration specifically designed for conservation of space in printed circuits and in filters. Flat polystyrene sections are encapsulated in uniform epoxy preforms to provide the following features:

0.1" thickness

Uniform lead spacing for p-c use.
Uniform size and flush mounting.
Both weldable and solderable leads.
Rugged, moisture proof construction.



specifications

CAPACITANCE RANGE: .001 to .01 mfd
TOLERANCE: ±5%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.
VOLTAGE RATING: 100VDCW
INSULATION RESISTANCE: 10^{13} ohms minimum at 25°C — 10^{12} ohms at 85°C.
DISSIPATION FACTOR: 0.01% maximum at 25°C, — 0.02 maximum at 85°C.
DIELECTRIC ABSORPTION: 0.05% maximum at all temperatures.
TEMPERATURE COEFFICIENT: Negative 190 ±30 ppm/°C
LONG TERM OPERATING STABILITY: ±0.1% maximum drift under fixed or variable operating conditions within specified maximum limits.

All the above design advantages are accompanied by modest prices and quick delivery. Any value within the standard range (.001 mfd. to .01 mfd.) is in stock in all tolerances for immediate delivery (72 hours).

In addition to the physical advantages of this design, the electrical excellence of ARCO polystyrenes has been retained. High long term stability under maximum operating conditions, low dissipation factor and dielectric absorption, extremely high insulation resistance, close tolerance are featured. And also important is the ARCO control of quality which results in close uniformity not only from unit to unit, but from production lot to production lot as well.

The Nickel "A" leads of ARCO Type PE capacitors are welded directly to the capacitor section. The strength and permanence of electrical contact is thereby entirely independent of encapsulation.

All Arco Type PE capacitors are "debugged" 100% prior to shipment by accelerated life test at stress levels exceeding ratings to eliminate potential early failures. Extensive data on reliability of Arco polystyrene capacitors is available for documentation

precision RC networks

the ultimate in temperature coefficient control of RC product.

linear TC of ±5 ppm/°C over temperature range of −55°C to +85°C.

ARCO's ability to produce capacitors with adjustable and closely uniform characteristics has facilitated the design of highly precise RC networks. By matching zero temperature coefficient resistors and capacitors, or by balancing temperature coefficients to obtain a zero (or other specified) T.C. on the RC product, networks which have long term stability independent of temperature are obtained. At the same time, RC products of better than ±0.05% accuracy can be supplied. Testing is performed on a 100% basis on both resistors and capacitors with temperature coefficient data recorded at the temperature extremes.

PRECISION FILM CAPACITORS

Balco/Marstan brings together the precision capacitor experience of Balco Capacitors and the precision resistor capability of Marstan Electronics. Balco/Marstan specializes in the design of ultraprecision film capacitors, wirewound resistors, and networks — resistive, capacitive, or RC. The product line — special or standard — is designed for the user who needs a combination of demanding performance parameters such as high stability, low temperature coefficient, and tight tolerance over a wide range of environmental extremes.

BALCO/MARSTAN PLASTIC FILM CAPACITORS
Feature:

- Accuracy Tolerances to 0.1%
- Dielectric Absorption lower than 0.03%
- Dissipation Factors to 0.008%
- Insulation Resistance greater than 10^{14} ohms
- Retrace Stability lower than 0.02%

DIELECTRIC SELECTOR GUIDE

The following chart lists typical specifications:
Precision and stability factors can be improved by special processing of materials before assembly.

PARAMETER	TEFLON		POLYCARBONATE		POLYSTYRENE		MYLAR

TERM	DEFINITION
Dielectric Absorption	Property of dielectric materials, sometimes called dielectric hysteresis, causing current to continue flowing after capacitor is theoretically charged and charge to remain after capacitor is theoretically discharged.
Dissipation Factor	Ratio of the equivalent series resistance to reactance of a capacitor at a given frequency.
Retrace Stability	Measure of the difference in capacitance value at a specific temperature after the capacitor has been exposed to a temperature excursion.
Temperature Coefficient	Change in capacitance as a function of temperature, resulting from variations in dielectric constant, capacitor geometry, and mechanical stresses.

For Presision Resistors see pages 2820 and 2821; for Precision RC Networks see page 1296.

CAPACITOR TYPES

Balco/Marstan uses six different dielectrics to assure you of precision capacitors to meet a variety of specifications:

Teflon — ultrastable, low loss, low temperature coefficient material, ideally suited for high insulation resistance requirements at temperatures up to 200°C. Available in extended foil and metalized film.

Polystyrene — ultrastable, very low loss material with a linear negative temperature coefficient that favors its use in applications at temperatures up to 85°C, where optimum electrical performance is essential. Available in extended foil and metalized film.

Polycarbonate — ultrastable material with a low temperature coefficient, for use at temperatures up to 125°C. Available in extended foil and metalized film.

Mylar — suggested for temperatures up to 125°C in applications where extreme precision is not required, but size and cost are important factors. Available in extended foil and metalized film.

Two different internal construction styles are offered as options to the circuit design engineer:

Extended Foil — Low dissipation factors and high circulating current capabilities favor its selection for use in high power resonant and pulse circuits.

Metalized Film — Self healing in the event of voltage breakdown, its more uniform temperature coefficient and low volume per microfarad make it ideal for resistor coefficient matching and for use in subminiature capacitors.

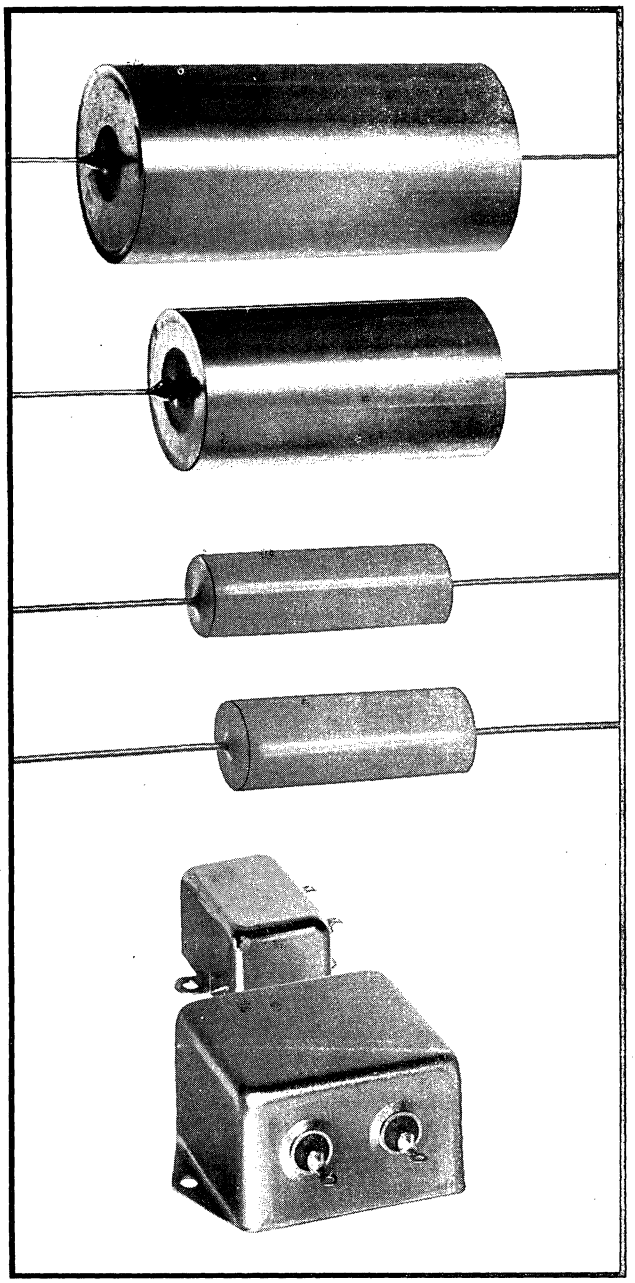
Capacitors can be provided in any of the following packages:

Hermetically Sealed for maximum environmental protection to insure high precision and stability.

Tape Wrap primarily for economy in price and size where severe environments are not involved.

Plastic Encased to provide mechanical ruggedness and moderate environmental protection.

Specials, including plastic and metallic enclosures, designed for custom packaging requirements.



PRECISION NETWORKS

Our unique side by side resistor and capacitor processing ensures the ultimate in component compatibility and overall network performance. Resistors and capacitors can be precisely matched to track over wide temperature ranges.

Typical Networks Manufactured by Balco/Marstan:

- Matched impedance Attenuators
- Summing Networks
- Integrators
- Voltage Dividers
- Phase Shifters
- Binary Resistance Networks
- Twin T Networks
- Bridges
- A/D and D/A Converters
- Timing Networks

25	.3 to 1.0"	±30% or ±20%	5%	.015 to .2

High Temperature

Wide range of capacities, tolerances, TC & Hi-K bodies for operation at 125°C. Exceptionally stable Hi-K bodies with maximum change in capacity of ±15% from −55°C to +125°C are available.

Polystyrene Capacitors are also available in the Centralab line. These long life, low cost units are the ideal replacements for paper, mica, and Mylar capacitors.

FOR IMMEDIATE DELIVERY — many of these are available through Centralab Industrial Distributors.

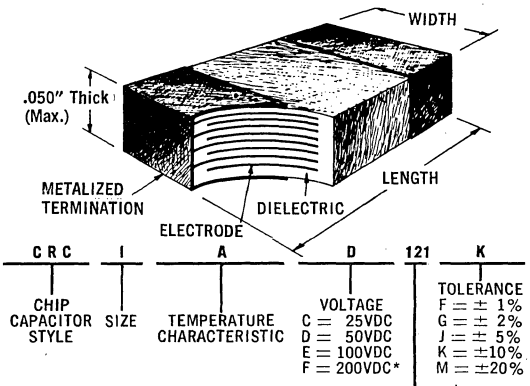
CHIP CAPACITORS

GENERAL SPECIFICATIONS

1. Capacitance: Capacitance range 1 pf through 3.9 mfd. When measured as listed below at 25°C (Reference MIL-STD 202 Method 305).
2. Capacitance Tolerance: Standard tolerance ±10%, ±20%, and G.M.V. (Other tolerances available on special order.)
3. Dissipation Factor: Measured as listed below at 25°C (Reference MIL-STD 202 Method 305).
4. Insulation Resistance: Greater than 50,000 megohms or 1,000 megohm mfd, whichever is less when tested at a minimum of twice rated voltage and in accordance with Method 302, of MIL-STD 202.
5. Voltage Rating: See chart (Other voltage ratings available for special applications.)
6. Temperature Range: —55°C to +125°C, operating for all values with no voltage derating required.
7. Dielectric Withstanding Voltage: A test potential of 2.5 times rated voltage applied between the capacitor terminals for a period of 5±1 seconds with a limiting surge current of 50 m a maximum, in accordance with method 301 of MIL-STD 202.

Characteristic	Maximum DF @ 25°C	Temperature Characteristics	
		Zero Volts	Rated Volts
A	.1% when measured @ 1 KHz @ 1 VRMS	± .5%	± .5%
B	2.5% when measured @ 1 KHz @ 1 VRMS	±15%	±15% —25%
C	2.5% when measured @ 1 KHz @ 1 VRMS	+ 8% —17%	+ 8% —30%

*Over Temp. Range —15° to +85°C



Capacitance in Pico-farads (pf). The first two digits represent significant figures; the last digit specifies the number of zeros to follow. (120 pf is illustrated.)

*Special quote for 200VDC or higher voltage rating

CASE TYPE: Molded epoxy, tubular axial leads.
LEADS: Solder coated oxygen free copper. No. 26 AWG .016 +.004, −.001 for CK12 & CK13 Styles and No. 22 AWG .026 +.004, −.001 for CK14, CK15, CK16 Styles.
PART MARKING: Manufacturers Symbol, Date Code, Part Number, Tolerance and Voltage Rating.

ELECTRICAL

DISSIPATION FACTOR (DF): 2.5% maximum.
INSULATION RESISTANCE (IR): 100,000 megohms minimum or 1,000 megohm microfarad minimum, whichever is less.
DIELECTRIC WITHSTANDING VOLTAGE: 250% of rated voltage, current limited to 50 mA, applied between the capacitor terminals.

ENVIRONMENTAL

OPERATING TEMPERATURE RANGE: −55°C to +125°C operating for all values with no voltage derating.
TEMPERATURE CHARACTERISTICS: BX, ±15% at zero volts, +15%, −25% at rated volts for all values −55°C to +125°C.
BR, ±15% at 0 volts, +15%, −40% at rated volts for all values −55°C to +125°C.

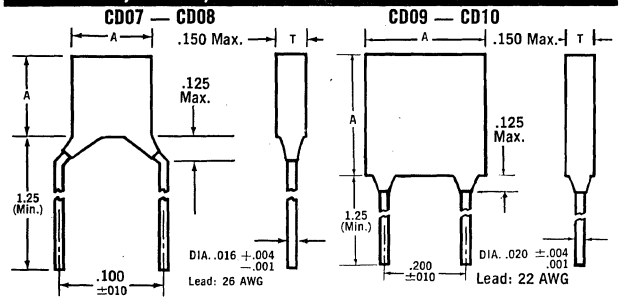
CD07, CD08, CD09 & CD10 CAPACITORS



GENERAL SPECIFICATIONS

CASE TYPE: Dipped resin.
LEADS: Solder coated oxygen free copper. No. 26 AWG (CD07/08). No. 22 AWG (CD09/10).
PART MARKING: Where space permits. Manufacturing Symbol, Capacitance Value, Capacitance Tolerance (K or M) and Voltage Rating.

ELECTRICAL

DISSIPATION FACTOR (DF): Characteristic K: 2.5% maximum for values of 10 pF through 1.00 microfarad. Characteristic N: 0.1% maximum for values of 10 pF through 0.01 microfarad.
CAPACITANCE AND DF MEASUREMENTS: Test Frequency for characteristic K in values of 100 pF or less: 1 MHz ±1 kHz and values over 100 pF: 1 kHz ±100 Hz. Characteristic N in values of 1000 pF or less: 1 MHz ±1 kHz. Values over 1000 pF: 1 kHz ±100 Hz. Test Voltage: 1.0 ±0.2 volts rms.
INSULATION RESISTANCE (IR): 50 volts DC applied, the insulation resistance shall be 100,000 megohms Minimum or 1000 megohm microfarad, whichever is less.
DIELECTRIC WITHSTANDING VOLTAGE: A test voltage equal to 250% of rated DC voltage current limited to 50 MA.

ENVIRONMENTAL

OPERATING TEMPERATURE RANGE: −55°C to +125°C operating for all values with no voltage derating required.
TEMPERATURE CHARACTERISTICS: Characteristic K: ±15% at zero volts DC, from −55°C to +125°C. Characteristic N: 0 ±30 PPM/°C at zero volts DC from −55°C to +125°C.

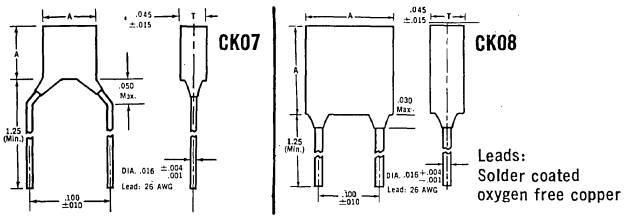
CK07 & CK08 CAPACITORS



GENERAL SPECIFICATIONS/24B SERIES

CASE TYPE
Dipped resin
LEADS
Solder coated, oxygen free copper. No. 26 AWG (CK07 and CK08).
PART MARKING
Where space permits Manufacturing Symbol, Capacitance Value, Capacitance Tolerance (K or M), and Voltage Rating.

ELECTRICAL

DISSIPATION FACTOR (DF)
2.0% maximum
CAPACITANCE AND DF MEASUREMENTS
100 pF or less: 1 mHz ±1 kHz. Values over 100 pF: 1 kHz ±100 Hz. Test Voltage 1.0 ±0.2 volts rms.
INSULATION RESISTANCE (IR)
50 volts DC applied the insulation resistance shall be 100,000 megohms Min.
VOLTAGE RATING
50 WVDC for all values to 125°C. Refer to Part Number Table on front of data sheet.
DIELECTRIC WITHSTANDING VOLTAGE
A test voltage of 400 volts DC current limited to 50 mA applied between the capacitor terminals.

ENVIRONMENTAL

OPERATING TEMPERATURE RANGE
—55°C to +125°C operating for all values with no voltage derating required.
TEMPERATURE CHARACTERISTICS
BX ±15% at zero volts, +15% —22% at rated voltage from —55°C to +125°C.

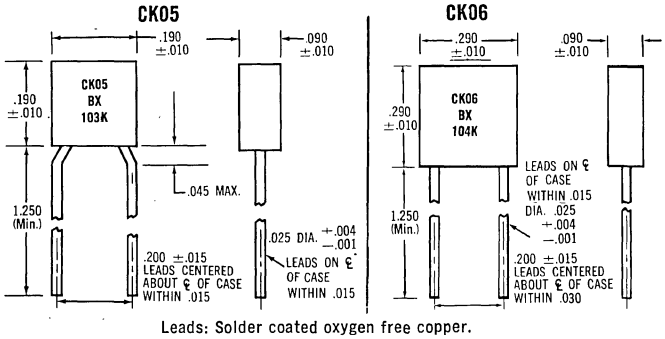
CK05 & CK06 CAPACITORS



Leads: Solder coated oxygen free copper.

GENERAL SPECIFICATIONS/819 SERIES

CASE TYPE
Molded epoxy
LEADS
Solder coated oxygen free copper suitable for soldering or welding No. 22 AWG .025 + .004, —.001
PART MARKING
Manufacturers Symbol, Data Code, Part Number, Tolerance and Voltage Rating.

ELECTRICAL

DISSIPATION FACTOR (DF)
2.5% maximum
CAPACITANCE AND DF MEASUREMENTS
Test Frequency, 100 pF or less: 1 mHz ±1 kHz. Values over 100 pF: 1 kHz ±100 Hz. Test Voltage 1.0 ±0.2 volts rms.
INSULATION RESISTANCE (IR)
Rated voltage applied, the insulation resistance shall be 100,000 megohms minimum or 1000 megohm microfarad, whichever is less.
DIELECTRIC WITHSTANDING VOLTAGE
250% of rated voltage, current limited to 50 mA, applied between the capacitor terminals.

ENVIRONMENTAL

OPERATING TEMPERATURE RANGE
—55°C to +125°C operating for all values with no voltage derating.
—55°C to +150°C operating for values 10 pF thru 1000 pF (CK05 style) and 1200 pF through .01 μF (CK06 style).
TEMPERATURE CHARACTERISTICS
BX, ±15% at zero volts, +15% —25% at rated volts for all values
—55°C to 125°C.
CW, +22% —56% at zero volts, +22% —66% at rated volts for values 10 pF through 1000 pF (CK05 style) and 1200 pF thru .01 μF (CK06 style) —55% to +150°C.

MIL-C-39022/9A

AC-DC RATED POLYCARBONATE CAPACITORS

CRC Polycarbonate Capacitors Qualified To MIL-C-39022/9A

SANTA MONICA, CALIF. — A new Air Force Established Reliability Specification, 39022/9A, Style CHROI, has been released for critical film capacitor applications.

The CHROIA, B and C styles are rated at 30VDC and 22 volts AC RMS up to 4,000 Hz. The CHROID, E and F styles are rated at 50VDC and 36 volts AC RMS up to 4,000 Hz.

The /9A individual spec. sheet is so unique in performance requirements that the basic document 39022 had to be revised to read, "CHROI styles may be used for applications requiring a tight tolerance, excellent capacitance stability, very high insulation resistance, and low loss factors where the alternating current (AC) component of voltage is large with respect to the applied direct current (DC) voltage and where momentary breakdowns cannot be tolerated."

Capacitors purchased to the /9A spec. must be 100% Group A screened including a special AC square wave test, which applies high energy current pulses to each capacitor. This test was included to eliminate termination and overheating problems common in AC applications.

Novel Group C test requirements include monthly AC life tests at 4,000 Hz and 100°C and semi-annual environmental testing to very tight measurement limits.

Failure rates based upon such closely held post-test requirements can not easily be compared to those established for existing Mil-Spec High-Rel Capacitors.

A Component Research Company spokesman stated that CHROI prices will be no higher than equivalent polycarbonate types listed in their catalog.

Plans are being studied for expansion of the Santa Monica plant to handle the increased business anticipated for the Mil-Spec. approved capacitors.

MIL-C-39022/9A is the first of a new generation of high reliability film capacitor specifications to be issued based upon the highest quality and performance requirements for the 1970's. Component Research Company has pioneered the development and manufacture of these polycarbonate capacitors which made such remarkable specifications possible.

Component Research Company is also conducting tests on standard Teflon, Polystyrene, Polysulfone and other dielectric type capacitors in order to qualify for similar Established (High) Reliability Specifications.

Capacitors of special design, covered by recent patents, which are capable of unusual performance with improved volume efficiency, are now being tested for ultimate qualification to meet Established (High) Reliability Specifications.

The 30 and 50 volt type PV, PK, PL and PG Polycarbonate capacitors shown on Pages 11-16 of this catalog are interchangeable with the CHROI styles listed in the table below.

In order for us to recommend the best suited capacitor for special applications, please send us your specification requirements.

100% SCREENING AND GROUP "A" INSPECTION PER MIL-C-39022/9A

AC SINUSOIDAL LIFE TEST

GROUP C, SUBGROUP 3B. CHROIA AND CHROID ONLY.

Capacitors shall be tested at 100°C at a frequency of 4KHz with 30 VRMS (CHROIA) and 50 VRMS (CHROID) applied for 240 $^{+48}_{-0}$ hours. The total value of the samples to be tested shall equal 40 mfd. This test is to be performed every month to verify the AC ratings. We expect that failure rates based on AC Life Testing will be included in MIL-C-39022/9A after accumulation of sufficient data.

‡ AC Ratings apply to capacitance values up to 4 mfd, 0 to 4KHz. Above 4 mfd, the product of the capacitance in mfd and the frequency in KHz shall not exceed 16. Above 4KHz, derate linearly to 10KHz at 40%; to 40KHz at 10%.

‡ RMS CURRENT AND VOLTAGE RATINGS

DC RATED VOLTAGE		AC RATED VOLTAGE	
−55 to +100°C	+100 to +125°C	−55 to +100°C	+100 to +125°C
30VDC STYLES • CHROIA • CHROIB • CHROIC	Linear Derating from 30 volts at 100°C to 15 volts at 125°C	22 volts rms. Max. current 2.2 amps for values 4 mfd or greater.	Linear derating 22 to 11 VRMS Max. current 1.1 amps for values 4 mfd or greater
50VDC STYLES • CHROID • CHROIE • CHROIF	Linear Derating from 50 volts at 100°C to 25 volts at 125°C	36 volts rms. Max current 3.6 amps for values 4 mfd or greater.	Linear derating 36 to 18 VRMS Max. current 1.8 amps for values 4 mfd or greater

GENERAL INFORMATION

ORDERING INFORMATION

To expedite the ordering of prototype quantities we have listed 1-6 quantity prices. Immediate quotation for any quantity required will be given upon request. Our terms are ½% 10 days, Net 30, F.O.B. our plant. Minimum order is $10.00.

PATENT INFORMATION

CRC capacitors are exclusively manufactured under one or more of the following patents and additional patents pending: 3,238,428; 3,260,906; 3,292,063; 3,506,895; 3,539,886.

SPECIAL PRODUCTS AND SERVICES

HIGH RELIABILITY SCREENING

Your most critical requirements for Space or Missile quality capacitors can be met by following a standard or custom CRC-engineered quality test plan.

STRESS TESTED STERILIZATION

CRC capacitors are being supplied high temperature screened to meet long-voyage space requirements of the 1970's and 1980's.

MATCHED CAPACITOR SETS

Customers may purchase 0.5% or 1% tolerance capacitors and ask that we match them in sets of the same or different values to ±0.1% accuracy. You may also require that capacitors be supplied in pairs that track in temperature coefficient linearity as close as ±0.01% for capacitance change with temperature.

HIGH INSULATION RESISTANCE

Capacitors can be supplied measured at temperatures higher than 25°C to meet a special requirement. As an example, we make 30 volt Polycarbonate Capacitors which must exceed 250,000 megohms at 85°C. We can also supply capacitors that can exceed 1,000,000 megohms at 85°C and higher.

ELECTRICAL TEST INFORMATION

The high quality of CRC capacitors may be difficult to evaluate unless sufficiently sensitive and accurate equipment is utilized in conjunction with proper measurement techniques.

Capacitance bridges equal to the General Radio 1620A are recommended for best accuracy of capacitance and dissipation factor. The dissipation factor of capacitors in values above 1 mfd should be measured at 0.1 KHz rather than at 1 KHz which is standard for smaller values, due to the high series resistance of presently available bridges. When performing remote measurements in a test chamber the same problem, due to lead resistance, may also cause an apparent increase in the dissipation factor readings.

Insulation resistance measurement is performed by Component Research Co. using leakage current methods which are repeatable to less than 1 picoamp for capacitors less than 0.1 mfd. Larger values require adequate charge time to minimize dielectric absoption effects. Guard boxes are used to perform leakage current and dielectric absorption measurements.

INSTALLATION INSTRUCTIONS

To prevent damage to the hermetic seal joint, use a tweezer type heat sink between the soldering iron and solder beads when soldering within ¼" of beads.

Prior to lead bending or twisting, protect glass seals and solder joints by gripping with a small pliers, area of leads near solder beads.

Contaminating films on the glass seal surfaces may occur during customer handling and installation of capacitors. To preserve the high insulation resistance inherent in CRC capacitors, clean the glass seal surfaces thoroughly with acetone or a chlorinated hydrocarbon fluid.

HOW TO SPECIFY COMPLETE PART NUMBER

05TA104 A Z S N

BASIC PART NUMBER

TOLERANCE LETTER

A 0.1%	B 0.25%	D 0.5%	F 1%	G 2%	J 5%	K10%

CASE STYLE: LETTER "Z" APPLIES ONLY TO GROUNDED STYLE, OMIT LETTER FOR STANDARD STYLE ISOLATED CASE.

SLEEVING: LETTER "S" APPLIES ONLY TO MYLAR SHRINK-FIT SLEEVING STYLE, OMIT LETTER FOR STANDARD UNINSULATED STYLE.

TERMINAL LEADS: LETTER "N" APPLIES TO GOLD PLATED NICKEL LEADS, OMIT LETTER FOR TINNED COPPER WELD LEADS.

Example 1—Part 05TA104AZSN shown above is a 50 volt, "TA" Teflon capacitor, 0.1mfd, ± 0.1% tolerance, with a grounded case, mylar sleeving, and gold-plated nickel leads.

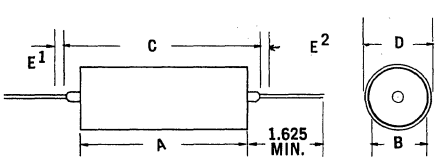
Example 2—Part 1PL106F would be a 100 volt, "PL" Polycarbonate capacitor, 10mfd, ± 1% tolerance, standard isolated case, and tinned copperweld leads.

Example 3—Part 05PL1354DS would be a 50 volt polycarbonate capacitor, 1.35 mfd, ± 0.5%, standard case, sleeving, and tinned copperweld leads.

Note: 1354 represents 1,350,000 picofarads. The last digit, 4, indicates the number of zeros.

CAPACITOR CONSTRUCTION INFORMATION

- All standard types in Catalog "E" are hermetically sealed in metal tubular cases with both terminals electrically isolated from the case. Capacitors are 100% helium leak tested for true hermetic seal.
- #22 AWG wire leads are used for .312 and smaller case diameters.
  #20 AWG wire leads are used for .400 and larger diameters.
- Lead material may be gold plated nickel per MIL-STD-1276, Type N2 or tinned copper clad steel wire as noted in the capacitor specifications.
- When mylar shrinkfit sleeving is desired, add "S" to the basic part number as shown to the left.



MECHANICAL TOLERANCES AND NOTES

A Length "A" is ± .03" max.

B Diameter "B" is ± .01" max. (without mylar sleeving)

C Length "C" is 0.2" max. greater than "A"

D Diameter "D" is .01" max. greater than "B" (when sleeving is put on case)

E Length "E" is .062" max. solder wick area.

TJ TEFLON CAPACITORS

TJ Teflon capacitors meet the highest quality standards of the industry. TJ capacitors are power aged, stabilized, 100% reliability screened per Level "A" shown on Flow Plan page 19 and certified for performance. Superior electrical characteristics plus thorough screening, make these capacitors especially useful for Space and high reliability Military applications. Special TJ capacitors can be supplied with zero temperature coefficient ±10 PPM/°C to ±100 PPM/°C for a limited or wide temperature range.

TJ SPECIFICATIONS

OPERATING TEMPERATURE —62°C to 125°C at full rated voltage

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.4% max at −55°C	0.0% ref. at 25°C
+0.25% max at −25°C	−0.15% max at 55°C
+0.2% max at −10°C	−0.25% max at 85°C
+0.1% max at 0°C	−0.4% max at 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.01% max
−62°C to 125°C	0.05% max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes, maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
Greater than 0.1 mfd (in megohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

DIELECTRIC ABSORPTION—0.02% max at 25°C.

DISSIPATION FACTOR—0.03% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

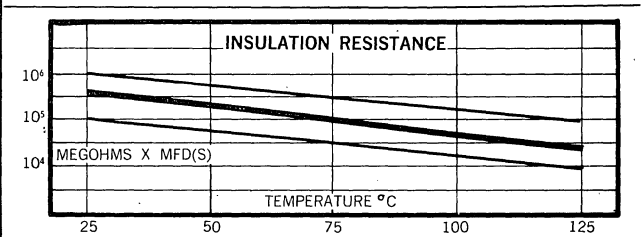
DIELECTRIC STRENGTH—200% of rated volts.

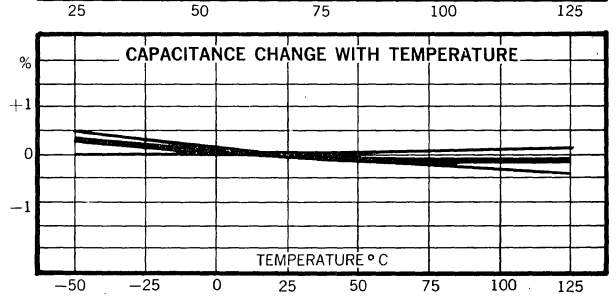
CONSTRUCTION—Hermetically sealed, extended metal film electrodes, leads isolated from case. Lead material is nickel, gold-plated, per Mil-Std-1276, Type N2.

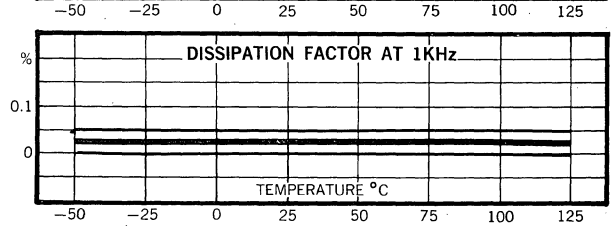
SEAL TEST—1 x 10^{-6} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall be capable of meeting all applicable requirements of MIL-C-39022/9A including high frequency vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION, PAGE 3







LEVEL "A" QUALITY ASSURANCE

"TJ" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

RELIABILITY SCREENING

1. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 25°C.*

POWER AGING AND STABILIZATION

7. *Burn-in at 125°C and 140% of rated voltage for a minimum of 48 hours.*
8. *Verification of stability by temperature cycling from —62°C to 125°C, 20 cycles minimum.*

PERFORMANCE CERTIFICATION

9. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
10. *Insulation resistance at rated voltage and 25°C.*
11. *Capacitance tolerance at 1KHz and 25°C.*
12. *Dissipation factor at 25°C.*
13. *Temperature coefficient measured from —55°C to 125°C at a minimum of 5 temperature points.*
14. *Visual inspection for dimensions, marking, and packaging.*
15. *Traceability to production and test records by permanent marking of parts with lot control number.*
16. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*
17. *Capacitors are serialized and packaged with certified test data to accompany each shipment.*

TA TEFLON CAPACITORS

TA teflon capacitors are used in aircraft and space guidance applications which require low loss, low temperature coefficient, excellent stability and reliability. The temperature coefficient slope from —55°C to +125°C is approximately —50 PPM/°C ±50 PPM. The TA capacitors are reliability screened per code **LEVEL B** shown on Flow Plan Page 19. See types TC and TJ teflon for higher reliability and performance.

TA SPECIFICATIONS

OPERATING TEMPERATURE

—62°C to 125°C at full rated voltage

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.6%	Max at	—55°C
+0.4%	Max at	—25°C
+0.3%	Max at	—10°C
+0.2%	Max at	0°C
0.0%	Reference	25°C
—0.25%	Max at	55°C
—0.5%	Max at	85°C
—0.6%	Max at	125°C

STABILITY

When temperature cycled from —62°C to 125°C for 5 temperature cycles, capacitance drift measured after stabilization shall not exceed:

Range	Retrace
—10°C to 85°C	0.02% Max
—62°C to 125°C	0.1% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
Greater than 0.1 mfd (in megohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

DIELECTRIC ABSORPTION—0.02% maximum at 25°C.

DIELECTRIC STRENGTH—200% of rated voltage.

DISSIPATION FACTOR 0.03% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

CONSTRUCTION

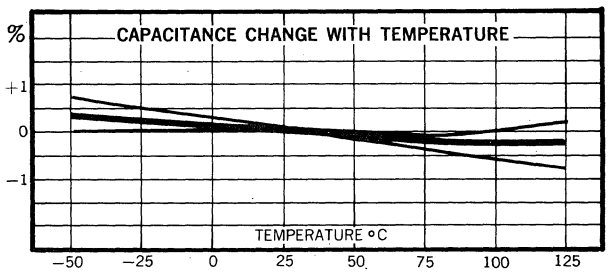
Teflon dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case. Lead material is nickel, gold-plated, per Mil-Std-1276, Type N2.

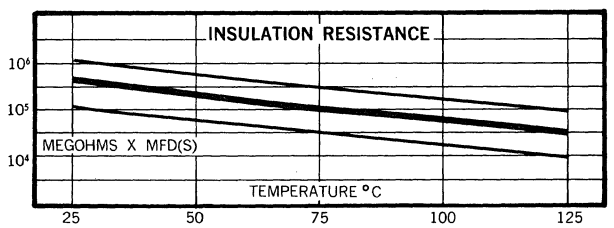
SEAL TEST — 1 x 10^{-6} ATM-CC/SEC max leak rate.

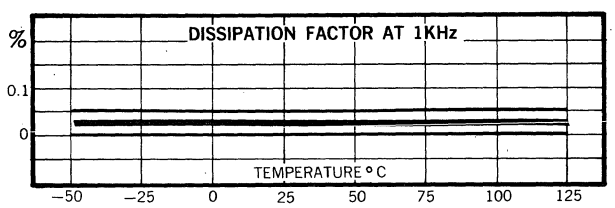
ENVIRONMENTAL

Capacitors shall be capable of meeting all applicable requirements of MIL-C-39022/9A including high frequency vibration.

FOR ADDITIONAL DETAILS,
SEE GENERAL INFORMATION SECTION, PAGE 3







LEVEL "B" QUALITY ASSURANCE

"TA" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 25°C.*
7. *Visual inspection for dimensions, marking and packaging.*
8. *Traceability to production and test records by permanent marking of parts with lot control number.*
9. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*

TC TEFLON CAPACITORS

Type TC teflon capacitors are high reliability screened per **LEVEL "A"** shown on Flow Plan page 19 and are qualified to meet the most stringent specifications. Each capacitor bears a unique serial number and is shipped with data certifying to 0.1% maximum capacitance drift after exposure to 5 temperature shock cycles from −62°C to +125°C. The TC capacitors are available in the same voltage ratings and case sizes as type "TA," level B capacitors. For increased screening and lower temperature coefficient see type TJ, level A capacitors.

TC SPECIFICATIONS

OPERATING TEMP. −62°C to 125°C at full rated voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.7% max at −55°C	0.0% ref. at 25°C
+0.5% max at −25°C	−0.25% max at 55°C
+0.3% max at −10°C	−0.50% max at 85°C
+0.25% max at 0°C	−0.60% max at 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
0°C to 50°C	0.02% max
−10°C to 85°C	0.05% max
−62°C to 125°C	0.1% max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
Greater than 0.1 mfd (in megohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

DIELECTRIC ABSORPTION — 0.02% max at 25°C.

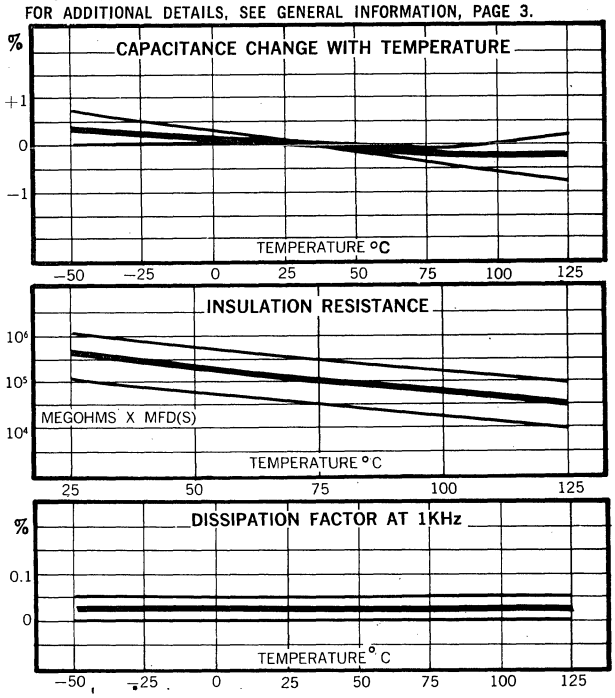
DISSIPATION FACTOR — 0.03% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

CONSTRUCTION — Teflon dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case. Lead material is nickel, gold-plated, per Mil-Std-1276, Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall be capable of meeting all applicable requirements of MIL-C-39022/9A including high frequency vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION, PAGE 3.



LEVEL "A" QUALITY ASSURANCE

"TC" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

RELIABILITY SCREENING

1. Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.

2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.

3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.

4. Insulation resistance at rated voltage and 25°C.

5. Capacitance tolerance at 1KHz and 25°C.

6. Dissipation factor at 25°C.

POWER AGING

7. Burn-in at 125°C and 140% of rated voltage for a minimum of 48 hours.

8. Verification of stability by temperature cycling from −62°C to 125°C, 5 cycles minimum.

PERFORMANCE CERTIFICATION

9. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.

10. Insulation resistance at rated voltage and 25°C.

11. Capacitance tolerance at 1KHz and 25°C.

12. Dissipation factor at 25°C.

13. Capacitors are 100% tested for 0.1% maximum drift with cycling from −62°C to 125°C.

14. Visual inspection for dimensions, marking, and packaging.

15. Traceability to production and test records by permanent marking of parts with lot control number.

16. Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.

17. Capacitors are serialized and packaged with certified test data to accompany each shipment.

TL TEFLON CAPACITORS

TL Teflon capacitors are used in many military and industrial computer applications where the temperature range is beyond the capability of polystyrene and a relatively low loss capacitor is needed. Type TL teflon capacitors are screened to **LEVEL C** specifications shown on Flow Plan Page 19. For higher reliability see type TA teflon.

TL SPECIFICATIONS

OPERATING TEMPERATURE —62°C to 125°C at full rated voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE ± 1% Max —55°C to 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.05% Max
—62°C to 125°C	0.25% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	1,000,000	1,000,000	500,000	250,000	100,000
Greater than 0.1 mfd (in megohms ÷ mfd)	100,000	100,000	50,000	25,000	10,000

DIELECTRIC ABSORPTION 0.1% Max at 25°C

DISSIPATION FACTOR 0.15% Max at 1KHz and 25°C

DIELECTRIC STRENGTH 200% of rated voltage

CONSTRUCTION — Teflon dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case. Leads are solderable gold-plated nickel or tinned copper-weld as available from stock at time of shipment.

SEAL TEST — 1 x 10^{-5} ATM-CC/SEC max leak rate.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "C" QUALITY ASSURANCE

"TL" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.
2. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
3. Insulation resistance at rated voltage and 25°C.
4. Capacitance tolerance at 1 KHz and 25°C.
5. Dissipation factor at 1 KHz and 25°C.
6. Visual inspection for dimensions, marking, and packaging.

TU TEFLON CAPACITORS

TU Teflon foil capacitors are unexcelled for high insulation resistance, low dielectric absorption and low dissipation factor over a wide temperature range. The TU capacitors are reliability screened per **LEVEL "B"** shown on Flow Plan Page 19; however, specials are available with Level "A" screening. We can also supply very high quality custom capacitors in any value from 100 Pf to 100 MFD and at higher voltages for research or production applications.

TU SPECIFICATIONS

OPERATING TEMPERATURE — −62°C to 125°C at full rated voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.8% Max at	−55°C	0.0% Reference at	25°C
+0.6% Max at	−25°C	−0.2% Max at	55°C
+0.3% Max at	−10°C	−0.5% Max at	85°C
+0.2% Max at	0°C	−0.8% Max at	125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.05% Max
−62°C to 125°C	.25% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	10,000,000	5,000,000	3,000,000	1,500,000	300,000
Greater than 0.1 mfd (in megohms ÷ mfd)	1,000,000	500,000	300,000	150,000	30,000

DIELECTRIC ABSORPTION — 0.01% Max at 25°C.

DISSIPATION FACTOR—0.005% Max as 1KHz and 25°C

DIELECTRIC STRENGTH — 200% of rated volts.

CONSTRUCTION — Teflon dielectric, extended foil electrodes, hermetically sealed, leads isolated from case, leads are nickel, gold-plated, per Mil Std 1276 Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall be capable of meeting all applicable requirements of MIL-C-39022/9A including high frequency vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "B" QUALITY ASSURANCE

"TU" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Stabilization by temperature cycling from −62°C to 125°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. procedure III A.
3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1KHz and 25°C.
6. Dissipation factor at 1KHz and 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.

TF TEFLON CAPACITORS

TF Teflon foil capacitors are extremely low loss capacitors for use over a wide temperature range. The TF capacitors are reliability screened per **LEVEL "C"** shown on Flow Plan Page 19. Custom capacitors can be furnished with special values, higher voltage ratings and special case configuration. See Type TU for higher, Level "B" reliability.

TF SPECIFICATIONS

OPERATING TEMPERATURE

—62°C to 125°C at full rated voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE

25°C reference ± 1.2% maximum from —62°C to 125°C.

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.1% Max
—62°C to 125°C	0.25% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	3,000,000	2,000,000	1,000,000	500,000	100,000
Greater than 0.1 mfd (in megohms ÷ mfd)	300,000	200,000	100,000	50,000	10,000

DIELECTRIC ABSORPTION — 0.03% at 25°C

DISSIPATION FACTOR — 0.02% Max at 1KHz and 25°C

DIELECTRIC STRENGTH — 200% of rated volts

CONSTRUCTION— "FEP" teflon dielectric film, extended foil electrodes, hermetically sealed with leads isolated from case, leads are tinned copperweld.

SEAL TEST — 1 x 10^{-5} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall be capable of meeting all applicable requirements of MIL-C-39022/9A including high frequency vibration.

LEVEL "C" QUALITY ASSURANCE

"TF" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
2. *Mass spectrometer hermetic seal per MIL-STD-202, Method 112, condition C, procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 1KHz and 25°C.*
7. *Visual inspection for dimensions, marking, and packaging.*
8. *Traceability to production and test records by permanent marking of parts with lot control number.*
9. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*

PL POLYCARBONATE
AC TESTED CAPACITORS

NEW

Our 30 volt 03PL and 50 volt 05PL capacitors are now available per MIL-C-39022/9A as CHROIB and CHROIE styles. See catalog pages 1 and 2.

Our 100 volt, 200 volt, and 400 volt PL Polycarbonte capacitors are now being tested for eventual qualification to MIL-C-39022/9A. After completion of qualification for the 100 volt and higher ratings, our PL catalog specifications will be revised to conform to MIL-C-39022/9A. For further information concerning equivalent CRC part numbers per MIL-C-39022/9A, please contact our sales office.

PL SPECIFICATIONS

OPERATING TEMPERATURE —62°C to 100°C at full rated voltage. Derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE

−1.5%	Max. at −55°C
−0.5%	Max. at −25°C
−0.35%	Max. at −10°C
−0.25%	Max. at 0°C
0.0%	Reference at 25°C
+0.2%	Max. at 55°C
+0.5%	Max. at 85°C
+1.0%	Max. at 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.05% Max.
−62°C to 125°C	0.25% Max.

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

MINIMUM IR TYPE 03PL, 05PL, 1PL					
Range	**25°C**	**55°C**	**85°C**	**105°C**	**125°C**
.001 to 0.1 mfd (in megohms)	3,000,000	2,000,000	1,000,000	300,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	300,000	200,000	100,000	30,000	1,000

MINIMUM IR TYPE 2PL, 4PL					
Range	**25°C**	**55°C**	**85°C**	**105°C**	**125°C**
.001 to 0.1 mfd (in megohms)	4,000,000	2,500,000	500,000	200,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	400,000	250,000	50,000	20,000	1,000

DIELECTRIC ABSORPTION — 0.2% Max. at 25°C.

DISSIPATION FACTOR — 0.2% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

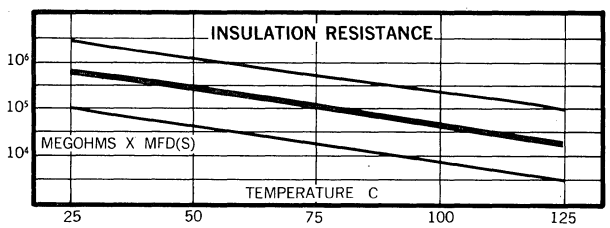
DIELECTRIC STRENGTH — 200% of rated volts.

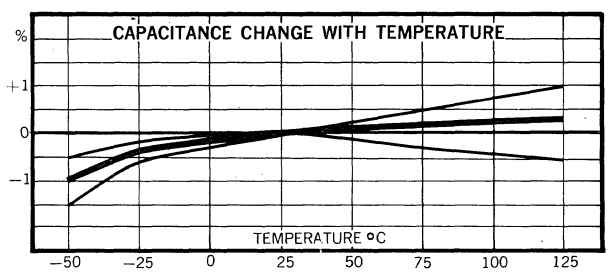
CONSTRUCTION — Polycarbonate dielectric, extended metal film electrodes, hermetically sealed, leads isolated from case. Leads may be tinned copperweld or gold-plated nickel per Mil Std 1276 type N2.

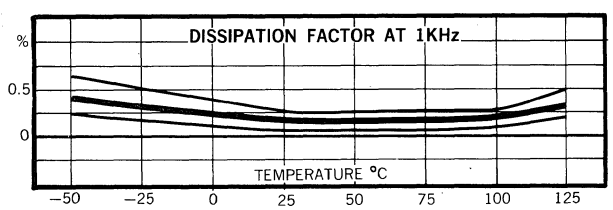
SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of MIL-C-39022/9A.

FOR ADDITIONAL DETAILS SEE PAGES; 1, 2, 3, 12, 13, 14, 15, 16, 17







LEVEL "B" QUALITY ASSURANCE

"PL" Polycarbonate Capacitors are 100% processed and tested as follows:

1. Stabilization by temperature cycling from −62°C to 125°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure IIIA.
3. DC Dielectric Strength—apply 200% of rated DC from lead to lead and leads to case for one minute.

3A. AC Dielectric Strength—apply 100 Hz square wave from lead to lead at a minimum peak to peak voltage of 3 x rated DC voltage for one minute.

4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and MIL-Q-9858 quality control standards.

PK POLYCARBONATE
AC TESTED CAPACITORS

NEW **Our 50 volt 05PK capacitors are now available per MIL-C-39022/9A as CHROID style. See catalog pages 1 and 2.**

Our 100 volt, 200 volt, and 400 volt PK Polycarbonate capacitors are now being tested for eventual qualification to MIL-C-39022/9A. After completion of qualification for the 100 volt and higher ratings, our PK catalog specifications will be revised to conform to MIL-C-39022/9A. For further information concerning the equivalent CRC part numbers per MIL-C-39022/9A, please contact our sales office.

PK SPECIFICATIONS

OPERATING TEMPERATURE
−62°C to 100°C at full rated voltage. Derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE — 25°C Reference

−0.75% ±0.25% at −55°C	+0.05% ±0.1% at 55°C
−0.35% ±0.15% at −25°C	+0.15% ±0.15% at 85°C
−0.25% ±0.15% at −10°C	+0.25% ±0.25% at 125°C
−0.15% ±0.1% at 0°C	

STABILITY
Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.03% Max
−62°C to 125°C	0.2% Max

INSULATION RESISTANCE — measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	3,000,000	2,000,000	1,000,000	300,000	20,000
Greater than 0.1 mfd (in megohms ÷ mfd)	300,000	200,000	100,000	30,000	2,000

DIELECTRIC ABSORPTION — 0.2% Max at 25°C.

DISSIPATION FACTOR — 0.2% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH — 200% of rated voltage.

CONSTRUCTION — Polycarbonate dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case, leads may be tinned copperweld or nickel, gold plated per Mil-Std 1276, Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of MIL-C-39022/9A.

FOR ADDITIONAL DETAILS, SEE PAGES: 1, 2, 3, 11, 12, 14, 15, 16, 17

PK Polycarbonate Capacitors are high reliability screened per **LEVEL "A"** shown on Flow Plan Page 19 and are in widespread use in space and other critical applications. All capacitors receive a high stress AC square wave voltage of approximately 300% higher peak to peak voltage than their DC ratings for additional screening purposes. The PK capacitors are available in all the voltage ratings and case sizes listed for Type PL Polycarbonate Capacitors on Page 12. Contact us for special capacitors selected for zero TC ±30 PPM from −10°C to 125°C in these same case sizes.

LEVEL "A" QUALITY ASSURANCE

PK Polycarbonate Capacitors are 100% processed and tested as follows:

RELIABILITY SCREENING
1. Stabilization by temperature cycling from −62°C to 125°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. procedure 111A.
3. DC dielectric strength—apply 200% of rated DC from lead to lead and from leads to case for one minute.
3A. AC dielectric strength—apply 100 Hz square wave from lead to lead at a minimum peak to peak voltage of 3 x rated DC voltage for one minute.
4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.

POWER AGING AND STABILIZATION
7. Burn-in at 125°C and 140% of rated voltage for a minimum of 48 hours.
8. Verification of stability by temperature cycling from −62°C to 125°C, 5 cycles minimum.

PERFORMANCE CERTIFICATION
9. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
10. Insulation resistance at rated voltage and 25°C.
11. Capacitance tolerance at 1 KHz and 25°C.
12. Dissipation factor at 25°C.
13. Temperature coefficient measured from −55°C to 125°C at a minimum of 5 temperature points. (Performed on lot sampling basis, minimum 10 pieces per lot.)
14. Visual inspection for dimensions, marking, and packaging.
15. Traceability to production and test records by permanent marking of parts with lot control number.
16. Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.
17. Capacitors are serialized and packaged with certified test data to accompany each shipment.

PV POLYCARBONATE
AC TESTED CAPACITORS

COMPONENT RESEARCH
MIL-C-39022/9

NEW

Our 30 volt 03PV Polycarbonate capacitors are now available per MIL-C-39022/9A as CHROIA style. See catalog pages 1 and 2. For further information concerning the equivalent CRC part numbers per MIL-C-39022/9A, please contact our sales office.

TYPE 03PV POLYCARBONATE FILM CAPACITORS are high reliability screened in accordance with the Level "A" flow plan shown on Page 19. In addition, we have added a special AC square wave stress test, shown in the Quality Assurance section, to improve the 03PV capacitor reliability for pulsating voltage applications.

The 03PV capacitors are the highest performance, highest reliability film capacitors available in subminiature size and are in widespread use in space, aircraft, and missile systems.

Custom capacitors can be provided with selected temperature coefficient, higher insulation resistance and special case styles. See Type PK for higher voltage rated types.

PV SPECIFICATIONS

OPERATING TEMPERATURE —55°C to 100°C at 30VDC. Derate linearly by 50% to 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE

—1.2% Max. at —55°C	±.15% Max. at 55°C
—0.25% Max. at —10°C	±.25% Max. at 85°C
0% Ref. at 25°C	±.50% Max. at 125°C

STABILITY—Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.03% Max.
—62°C to 125°C	0.2% Max.

INSULATION RESISTANCE—measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	4,000,000	2,000,000	1,000,000	500,000	50,000
Greater than 0.1 mfd (in megohms ÷ mfd)	‡ 1,000,000	‡ 400,000	100,000	50,000	5,000

‡Need not exceed IR values for 0.1 mfd or less.

DIELECTRIC ABSORPTION—0.2% Max. at 25°C.

DISSIPATION FACTOR—0.2% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH—400% of rated voltage.

CONSTRUCTION—Polycarbonate dielectric, extended metal film electrodes, hermetically sealed, leads isolated from case. Leads are gold plated nickel per Mil Std 1276 type N2.

SEAL TEST—1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of MIL-C-39022/9A.

PG POLYCARBONATE CAPACITORS
AC TESTED AND RATED

NEW **Our 30 volt 03PG and 50 volt 05PG capacitors are now available per MIL-C-39022/9A as CHROIC and CHROIF styles. See catalog pages 1 and 2.**

Our 100 volt, 200 volt, and 400 volt **PG** Polycarbonate capacitors are now being tested for eventual qualification to MIL-C-39022/9A. After completion of qualification for the 100 volt and higher ratings, our **PG** catalog specifications will be revised to conform to MIL-C-39022/9A. For further information concerning the equivalent CRC part numbers per MIL-C-39022/9A, please contact our sales office.

PG POLYCARBONATE CAPACITORS exceed MIL-Specification quality capacitors and are widely used for industrial and military applications. The PG capacitors utilize the patented CRC supported winding and stress-free lead design which has been fully qualified in many extensive test programs. The PG capacitors are reliability screened per **LEVEL "C"** shown on Flow Plan Page 19. See Types PL, PK, and PV for higher reliability level.

PG SPECIFICATIONS

OPERATING TEMPERATURE — −62°C to 100°C at full rated voltage, derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE —

± 2% max −55°C to 125°C
± 1% max −25°C to 85°C
±0.5% max 0°C to 55°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.25% max
−62°C to 125°C	0.50% max

INSULATION RESISTANCE—measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	1,000,000	500,000	100,000	50,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	100,000	50,000	10,000	5,000	1,000

DIELECTRIC ABSORPTION — 0.2% max at 25°C.

DISSIPATION FACTOR — 0.3% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

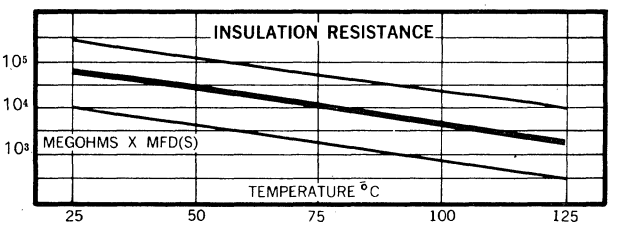
DIELECTRIC STRENGTH — 200% of rated volts.

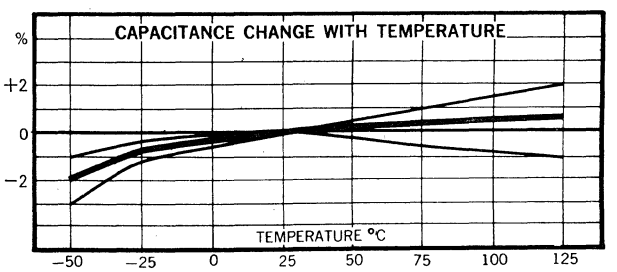
CONSTRUCTION — Polycarbonate dielectric, extended metal film electrodes, hermetically sealed, leads isolated from case. Leads may be tinned copperweld or gold-plated nickel per Mil Std 1276 type N2.

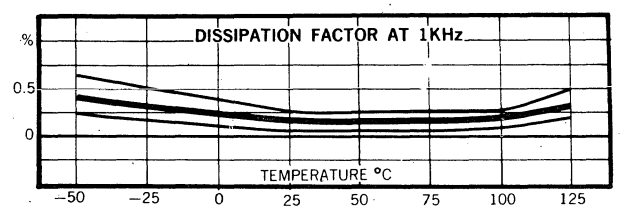
SEAL TEST — 1×10^{-5} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of MIL-C-39022/9A.

FOR ADDITIONAL DETAILS, SEE PAGES; 1, 2, 3, 11, 12, 13, 14, 16, 17







LEVEL "C" QUALITY ASSURANCE

"PG" POLYCARBONATE CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. *Stabilization by temperature cycling from −62°C to 125°C, 2 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, method 112, condition C, procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead, leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1 KHz and 25°C.*
6. *Dissipation factor at 25°C.*
7. *Visual inspection for dimensions, marking and packaging.*

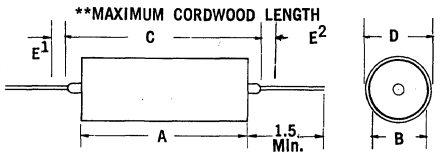
PQ POLYCARBONATE • CORDWOOD CAPACITORS • TQ TEFLON
HERMETICALLY SEALED



MECHANICAL TOLERANCES AND NOTES

- **A** Length "A" is ±.03" max.
- **B** Diameter "B" is ±.01" max. (without mylar sleeving)
- **C** Max. cordwood length (see tables)
- **D** Diameter "D" is .01" max. greater than "B" (when sleeving is put on case)
- **E** Length "E" is maximum of .062" that solder wick may run up gold plated leads from solder bead.

PQ POLYCARBONATE

Type PQ Polycarbonate Capacitors, the most compact high reliability film capacitors available, have a reduced bead to bead length for cordwood applications.

PQ SPECIFICATIONS—Same as for Type PG, see Page 15.

RELIABILITY — Similar to CHROIC, CHROIF Styles. See Pages 1 and 2 of this catalog.

LEAD MATERIAL—Tinned copper clad steel is standard. Also available with gold plated nickel. See Page 3.

SPECIALS—Higher reliability screening including AC HiPot testing can be supplied.

TQ TEFLON

Type 05TQ Teflon Capacitors, the smallest high quality teflon film capacitors available, have a reduced bead to bead length for cordwood applications.

05TQ SPECIFICATIONS—Same as 05TA, see Page 5, except for slightly higher temperature coefficient and a maximum dissipation factor of 0.05%. Specials are also available at higher voltage ratings.

RELIABILITY—Level "B." See Flow Plan Page 19.

LEAD MATERIAL—Gold plated nickel is standard. Also available with tinned copper-clad steel leads. See Page 3.

PA POLYSTYRENE CAPACITORS

PA Polystyrene capacitors reliability screened per Level "B" Flow Plan shown on Page 19, are used in operational amplifiers and networks because of their high insulation resistance, low dielectric absorption and long term stability. These PA capacitors are available at higher working voltages and in special case styles as required by the customer. Banks of precision capacitors, up to 100 MFD in value, have been supplied for space instrumentation applications.

Level "A" capacitors with burn-in and high reliability screening can also be supplied. For advance information on a new high temperature polystyrene capacitor see Pages 21 and 22.

PA SPECIFICATIONS

OPERATING TEMPERATURE: —55°C to 85°C at full rated volts.

TEMPERATURE COEFFICIENT: (See special notes below)

Values 0.001 MFD to 0.0082 MFD —80 ±50 PPM/°C
0.01 MFD to 2.0 MFD —60 ±50 PPM/°C

STABILITY: 0.1% maximum drift with 5 cycles from —62°C to 85°C.

INSULATION RESISTANCE: Measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 MFD, allow an additional minute/MFD charge time.

MINIMUM IR			
Range	25°C	55°C	85°C
0.001 to 0.1 MFD (in megohms)	5,000,000	2,500,000	500,000
Greater than 0.1 MFD (in megohms ÷ MFD)	‡ 1,000,000	‡ 500,000	‡ 100,000

‡ Need not exceed IR values for 0.1 mfd or less

DIELECTRIC ABSORPTION: 0.02% maximum at 25°C.

DISSIPATION FACTOR: 0.02% maximum at 25°C. Values to 1 MFD at 1 KHz, above 1 MFD at 0.1 KHz.

DIELECTRIC STRENGTH: 200% of rated voltage.

CONSTRUCTION: Polystyrene dielectric, extended foil electrodes, hermetically sealed. Leads isolated from case. Leads are tinned copperweld.

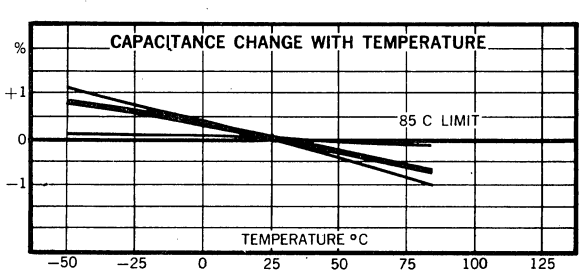
SEAL TEST: 1 x 10^{-6} ATM-CC/SEC. maximum leak rate.

ENVIRONMENTAL: Shall meet all applicable requirements of MIL-C-19978, including Grade 3 vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3.

NOTES:

SPECIAL PA CAPACITORS can be supplied with a negative coefficient of —20 to —100 PPM/°C that is linear to ±30 PPM/°C, ±20 PPM/°C and ±10 PPM/°C. **A WIDE SELECTION** is available of larger MFD values in bathtub and custom cases. **A SPECIAL HIGH TEMPERATURE,** high reliability type polystyrene capacitor is currently available and under test, see Pages 21 and 22.



LEVEL "B" QUALITY ASSURANCE

"PA" POLYSTYRENE CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Temperature cycling from —62°C to 85°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. Procedure IIIA.
3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 1 KHz and 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and MIL-Q-9858 Quality Control Standards.

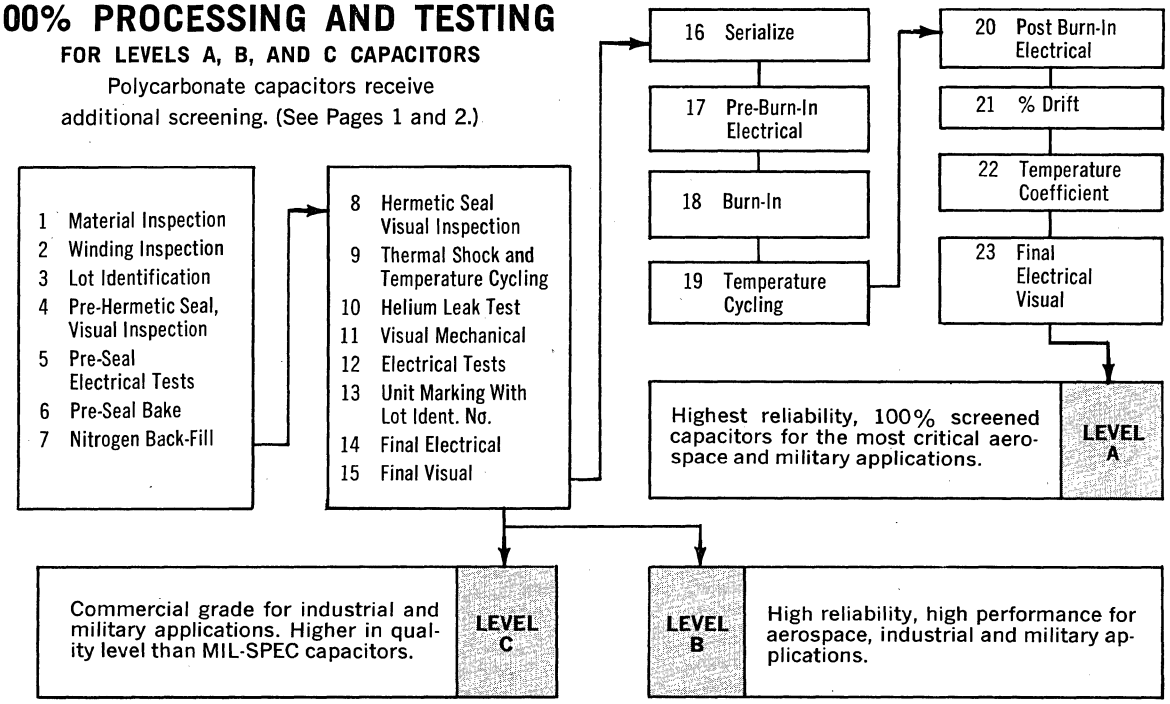
HIGH RELIABILITY FLOW PLAN

100% PROCESSING AND TESTING

FOR LEVELS A, B, AND C CAPACITORS

Polycarbonate capacitors receive additional screening. (See Pages 1 and 2.)



"MM" AND "MA" MYLAR CAPACITORS

SPECIFICATIONS

OPERATING TEMPERATURE — −62°C to 85°C full rated volts. Derate linearly to 50% of rated volts at 125°C.

CAPACITANCE vs TEMPERATURE	−55°C	−5% Max.	55°C	+1% Max.
	−25°C	−3% Max.	85°C	+3% Max.
	0°C	−1.5% Max.	125°C	+15% Max.

STABILITY — 0.1% maximum with −10°C to 85°C cycle.

INSULATION RESISTANCE	25°C	50,000 meg ÷ mfd min.	100,000 megs max.
	85°C	5,000	10,000
	125°C	100	400

DIELECTRIC ABSORPTION — 0.5%

DISSIPATION FACTOR — 0.8% max.

CONSTRUCTION — Hermetically sealed, extended metal film electrodes, leads isolated from case, tinned copper clad steel leads.

SEE PAGE 3 FOR ADDITIONAL INFORMATION.

OBSOLESCENCE NOTE

Type MA and MM Mylar capacitors have been used in many space and military applications due to their high reliability and small size, but may be eventually discontinued as a catalog item because of the superior performance of our Polycarbonate and Polysulfone capacitors. Although our Polysulfone capacitors are not listed as a standard item as yet in this catalog issue, they are available in the same case sizes as the Mylar capacitors as replacement units. Please contact us for more complete information.

LEVEL "B" QUALITY ASSURANCE

1. Stabilization by temperature cycling from −62°C to 125°C, 5 cycles minimum
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.
3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.

3A. AC dielectric strength — apply 100 Hz square wave from lead to lead at a minimum peak to peak voltage of 3 X rated DC voltage for one minute.

4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.
7. Visual inspection for dimensions, marking and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and MIL-Q-9858 quality control standards.

RELIABILITY INFORMATION

FAILURE ANALYSIS • LIFE TESTING • SIMULATION TESTING

CASE HISTORY RN-042

OPEN CIRCUIT CONDITION OF 100 VDC RATED CAPACITOR IN LOW VOLTAGE APPLICATION.

DETAILS: Customer discovered that existing voltage transients exceeding 100 volts, ultimately damaged several capacitors during system environmental checkout. No room was available for a larger size capacitor without costly re-tooling.

CORRECTIVE ACTION: A series of screening tests was conducted by CRC on both capacitors from the same lot, and a newer CRC type with the same characteristics but capable of withstanding more severe current surges. These tests were designed, in a step-by-step method to induce failure modes, under the customer's worst case conditions. Capacitance, IR and DF measurements taken after each step served to monitor all possible degradation trends. Following are the screening tests:

TEST STEP	TEST CONDITIONS
1	48 hours Burn-In @ 125°C/140 VDC.
2	20 Cycles from —62°C/125°C.
3	62 hours Burn-In @ 85°C/400 Hz/100 VRMS Sine Wave.
4	HiPot Test @ 600 VDC for 1 minute and @ 600 volts peak-to-peak @ 60 Hz square wave for 1 minute.
5	24 hours Burn-In @ 85°C/400 Hz/100 VRMS Sine Wave.
6	5.5 hours @ 85°C/60 Hz/400V peak-to-peak square wave.
7	23 hours Burn-In @ 125°C/300 VDC.
8	3 Cycles from —62°C/125°C.
9	23 hours Burn-In @ 125°C/400 VDC.
10	3 Cycles from —62°C/125°C.
11	37.5 hours Burn-In @ 85°C/60 Hz/300V peak-to-peak.

TEST CONCLUSIONS

Original capacitors used passed Step 3, but with significant increases of dissipation factor, then opened after Step 4. CRC replacement capacitors made with special electrodes (patent pending) survived all tests. Results for 10 samples are shown above.

CRC test capacitors are extremely stable with the major capacitance shift occurring after the conditioning of Step 1.

ADDITIONAL INFORMATION — 5 Picoamperes leakage current at 90 volts is equivalent to 18,000,000 megohms insulation resistance. CRC capacitors are therefore, remarkably high in insulation resistance after all screening tests.

CRC capacitors tested above were a special 1TJ103 Teflon type similar to those listed on Page 4 of our catalog. Larger values were also tested with equivalent results.

For AC applications, it is imperative that the customer conduct reliability screening tests utilizing pulsed voltages to avoid failures. Contact our Reliability Department for assistance in this matter.

RELIABILITY STUDY XT-294

HIGH VOLTAGE CAPACITORS

Customers have requested that CRC supply high reliability capacitors of both light-weight construction and minimum size. These units must withstand the most rigorous environmental conditions and yet perform electrically as precision capacitors. The following typical life test is only one of many conducted constantly to verify the outstanding performance of CRC capacitors, regardless of specialized application.

APPLICATION: A capacitor 0.25 MFD ±5% is required in a .670 x 1.875 hermetically sealed case to operate at 1500 VDC.

TEST PLAN: To determine whether the CRC type and size capacitor could be considered reliable for a long term space flight application, CRC decided to life test 26 samples at 2300 volts DC and 85°C. In order to study any possible failure modes, readings with extremely accurate measurement equipment were taken of capacitance, DF and IR, initially and at periodic intervals. The following data was available on 3-18-70, at the time of catalog preparation. Continued testing is planned to 10,000 hours.

TEST DATA XT-294		% Dissipation Factor @ 1 KHz		Insulation Resistance in Megohms @ 500 Volts and 25°C

26	—.55	.05%	.07%	2,200,000	2,300,000

TEST CONCLUSIONS

1. In order to establish failure criteria more severe and sophisticated than existing high reliability military specifications, CRC decided to establish the following as failures during or at end of test:
   A) An open or short circuit condition.
   B) Capacitance shift exceeding ±2%.
   C) % Dissipation factor must not exceed 0.2%.
   D) Insulation resistance must not fall below 100,000 megohms.
2. At the end of 1500 hours of test, results were as follows:
   CONDITION:
   A) No failures.
   B) Maximum capacitance shift was +.69%
   C) Maximum dissipation factor was .12%
   D) Minimum insulation resistance was 400,000 megohms.
3. By means of extrapolation based on the test data above, the failure rate is 0.0005%/10^3 hours at a 95% LCL confidence level.

ADDITIONAL INFORMATION—The capacitor described above is a specially modified polycarbonate extended metal film electrode capacitor and is capable of operation from —55°C to 125°C. It is also excellent for sinusoidal AC applications. Larger test batches will be tested at various stress levels and temperatures to study the unusual performance of these remarkable capacitors.

SPECIAL PRODUCTS SECTION
TEMPERATURE COEFFICIENT DATA

HIGH TEMPERATURE POLYSTYRENE CAPACITORS

CRC has developed miniature polystyrene capacitors that can safely be operated above 85°C. This has been made possible by the use of a combination of the CRC patented winding and termination construction, and special metal film electrodes (patent applied for), which support the polystyrene dielectric in a stress-free manner at temperatures above 85°C.

One hundred capacitors ranging from 0.001 to 0.1 MFD and rated at 50 volts were burned-in at 105°C and 140% of rated voltage for 72 hours, without failure. Some of the capacitors were also tested for insulation resistance at 45 volts from 25°C to 125°C without any shorts or opens occurring. CRC will conduct life tests at 85°C, 105°C and 125°C to determine the proper ratings for these unusual capacitors.

TC TRACKING OF MATCHED SETS

Recently a customer requested that we supply our 30 volt "PL" Polycarbonate capacitors in five values from .0022 MFD to 1 MFD so that the TC slopes track within ±0.25% of each other from —55°C to 125°C. We tested on a sample basis and found that our standard catalog type met this requirement. In addition, the customer requested the five capacitors to be 1% in tolerance but to be assorted and packaged in groups of five matched to 0.1%. We have been supplying thousands of such sets on a routine basis ever since.

In a more extreme example, a customer requested 0.1 MFD capacitors supplied in pairs so that they track within 0.01% from —10°C to 85°C. We found that our best polystyrene units in stock were limited to 0.02% and that selected "1TJ" Teflon capacitors met the 0.01% maximum requirement.

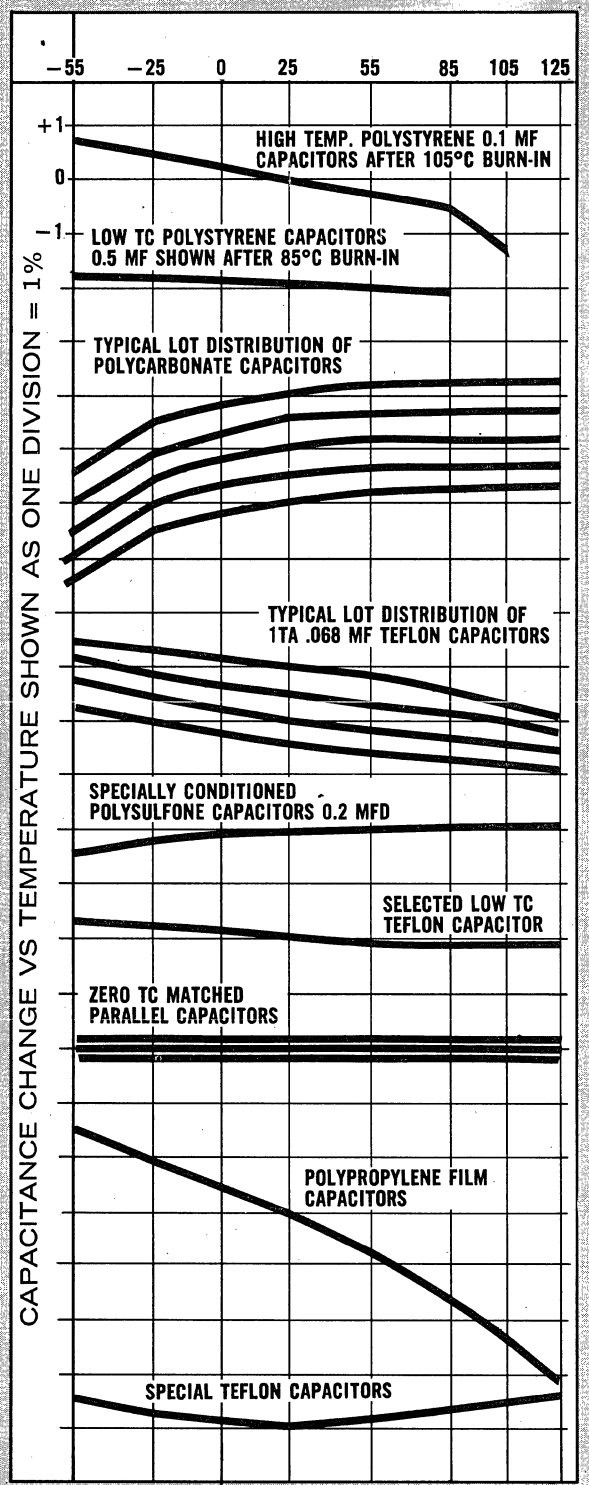
ZERO TC

We can match opposing coefficients of capacitors, such as polysulfone and teflon, to ±0.25% maximum from —55°C to +125°C. It is possible to match to ±0.1% for more limited temperature ranges. With the state of our art growing so rapidly, we may be able to guarantee closer limits on a production basis soon.

HIGH NEGATIVE TEMPERATURE COEFFICIENT

Our new "MP" extended metal film electrode polypropylene capacitors have a linear TC of —250 to —350 PPM/°C. The capacitors can be operated from —55°C to 125°C. The capacitors can be supplied in approximately the same case sizes as Type "05PA" Polystyrene, shown on Page 18 of the catalog. This new addition to our family of TC curves will provide design engineers with circuit capabilities not previously possible.

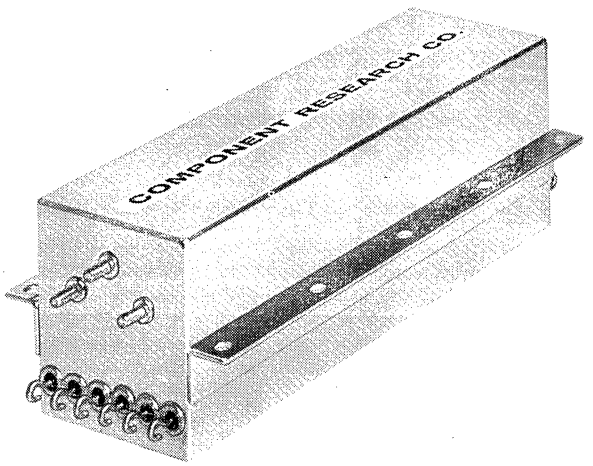
% CAPACITANCE VS TEMPERATURE



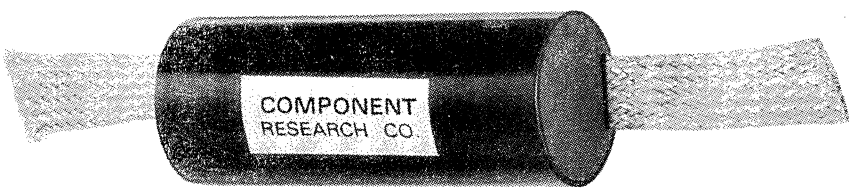
SCR COMMUTATION AND SPECIAL AC CAPACITOR APPLICATIONS

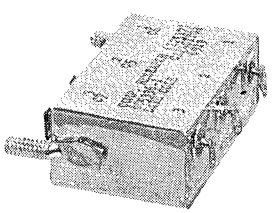
Capacitors designed for AC applications by CRC have very low equivalent series resistance and are remarkably cool and efficient for their size. The capacitor shown contains eight 1.2 MFD sections that operate up to 25 KHz at 170 volts AC RMS maximum with 25 amps at 25% duty cycle for each capacitor.

CRC was selected as the manufacturer to produce this special capacitor because of the extreme reliability required for a weapons program.

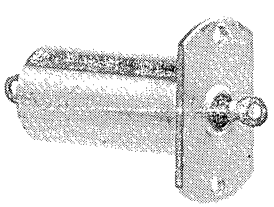


This epoxy cased capacitor is provided with heavy copper braided leads to handle the high peak and RMS currents when operated in SCR commutation circuits. Capacitors of polycarbonate, polypropylene and polysulfone have been used in applications from 400 Hz to 15 KHz.

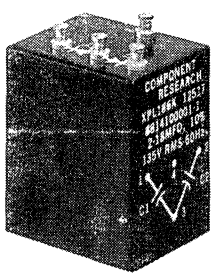




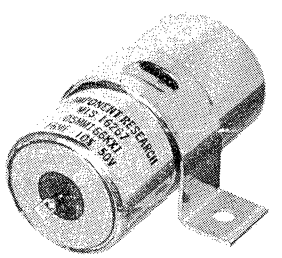
This high temperature filter contains two standard teflon capacitors and one feed-through teflon capacitor in a compact, efficient, case configuration.



A space application required high quality, small size, feed-through capacitors to handle 50 amps RMS. CRC designed solid copper terminations which provide lowest possible loss and excellent filter characteristics.



An airborne navigation system needed an extremely compact filter to replace a tantalum capacitor without increase in size. Specially processed polycarbonate capacitors that are 100% tested with square wave power supplies and then burned-in with sine wave voltages, provide the answer to a difficult problem.



Our customer required a capacitor capable of withstanding extreme shock and vibration without impairing high quality performance. Special potting techniques were used to maintain the capacitor characteristics, which was proven after extensive screening and qualification testing.

SELECTED CAPACITORS FOR HIGH INSULATION RESISTANCE & LOW DIELECTRIC ABSORPTION

CRC receives inquiries for capacitors that have a higher insulation resistance or a lower dielectric absorption than listed in the catalog specifications for our standard types. By means of 100% test and selection, capacitors of unusual performance can be supplied to meet your most exacting requirements.

The readings shown are typical of the "blue ribbon" quality capacitors of every lot. Up to 30% of the capacitors in a lot generally meet these "blue Ribbon" specifications.

CORNING ELECTRONICS / Houghton Park, Corning, New York 14830 / Phone 607, 962-4444

We make capacitors for guys who can't stand failures

CORNING® CYFM Capacitors give you environment-proof performance at substantial savings. They provide economical stability and reliability in coupling, decoupling, filtering, timing, switching, and many other critical circuits. The CYFM's are electrically and environmentally interchangeable with the CYFR type. We have boiled them in salt water, immersed them in saturated steam and subjected them to 96-hour salt spray and 1200 hours of moisture resistance tests without failure or degradation.

CORNING® CYFR Capacitors give you guaranteed reliability. They have contributed, and continue to contribute to marked improvement in MTBF in many military and space programs such as Titan, Surveyor, Syncom, Mariner, Apollo, and Gemini. Over 64-million unit-hours from lot acceptance tests over a five year period for Minuteman have demonstrated the reliability and reproducibility of the CYFR capacitor from a process under control.

CORNING® TYO Capacitors are ideal for printed circuit applications because of their miniaturization and radial lead configuration. Their design permits upright, flush mounting on circuit boards. Standard gold plated Dumet leads give reliable soldering or welding, and are spaced symmetrically with the case on .1" grids for fast installation on printed circuit boards. The lower prices of CORNING TYO Capacitors now provide a glass capacitor at comparable ceramic prices.

CORNING® CY60 and CY70 Capacitors are excellent for a large variety of radio frequency applications. They are used for power amplifiers, low power transmitters, and many electronic devices in grid, plate coupling, tank, and bypass functions. Because of their small size and minimum weight, these CORNING Capacitors are also suited for airborne equipment and all types of mobile transmitters.

The Glass-K is a miniature stable capacitor that exhibits a high capacitance-to-volume ratio. It offers the size advantages of ceramic types and the consistent performance associated with glass dielectrics.

The Glass-K's physical size and values of capacitance meet the requirements of both military and commercial applications. The larger capacitance values are suitable for point-of-use filtering in computers, and for bypassing and coupling elements in miniaturized circuitry. The smaller capacitance values are suitable for more critical circuit functions.

The Glass-K is designed for general purpose use in bypass, coupling, and filtering applications where the miniature size of ceramics is required and where **better performance** characteristics are desired at **competitive prices.**

Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

More than 6,000 manufacturers of electronic components, materials, instruments, assemblies, systems and key services are listed in the Yellow Section. An identical Yellow Section appears in each of the three volumes of **eem**, listing addresses, phone numbers and sales managers' names. TWX numbers are also included where available. **Boldface** listings indicate that detailed information on the manufacturers' products is cataloged in the White Section of **eem. Boldface** listings also indicate that local sales offices or representatives are listed for that manufacturer.

Electro Cube Capacitors

Special service on non-standard ratings, sizes or packages

Capacitors, in nearly any value, type, case configuration or size can be furnished by Electro Cube, on special order with short delivery. We'll design them to a particular requirement or make them to your specifications. We'll supply metal cases including bath tubs, tubular and rectangular hermetically sealed units, as well as epoxy, and wrap and fill types. More than 4,000 standard units are also available. Representative dielectrics and specifications are presented in the table to the right.

For substantial package size reductions, Electro Cube can supply a full line of 50VDC capacitors using .00008 gauge metallized polycarbonate. Specially designed manufacturing equipment and rigid controls give these units reliability equivalent to heavier gauge 100 volt metallized polycarbonate capacitors. Capacitance ratings from .001 mfd to 50 mfd are available in a variety of case styles.

We also design and produce RC networks and RFI filters for a wide range of applications. Electro Cube filters have been used in such projects as Apollo, Minuteman and the C-5A.

Electro Cube manufactures wire wound and foil wound transformers, both laminated and C core, toroids and special inductors. Through company funded development and testing, Electro Cube introduced the first commercially available autotransformers in 10KVA and lower ratings, and has developed processing techniques that make these devices reliable and economical. Electro Cube also can supply aluminum foil chokes with advantages similar to those of foil wound transformers. See page 2950 for data on transformers.

	METALLIZED POLYCARBONATE	MINIATURE HIGH VOLTAGE

NOW! High temperature Polysulfone dielectric Capacitors

For Capacitors with GREATER RELIABILITY . . .

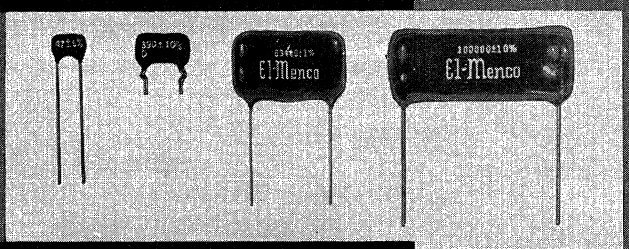
Choose El-Menco

The Capacitors You Find Wherever There's Electronics!

EL-MENCO DUR-MICA CAPACITORS

Only 1 Failure Per 43,000,000 Unit-Hours!

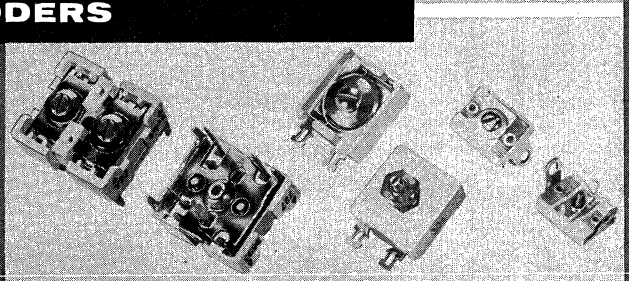
- It has been computed that "debugged" DM30, 10,000 MMF units, when subjected to 257,000 hours of life at 85°C with 100% of the rated DC voltage applied, will yield only 1 FAILURE PER 43,000,000 UNIT-HOURS!
- DM15, DM16, DM19, DM20 . . . perfect for miniaturization and for new designs using printed wiring circuits. Also available in DM30, DM42 and DM43.
- New "hairpin" parallel leads insure easy application.
- Exceed all electrical requirements of military specification MIL-C-5A.



EL-MENCO TRIMMERS & PADDERS

Design Versatility!

- Available in 350 VDC and 500 VDC as well as other test voltages.
- All bases are of low-loss steatite.
- Special lugs are obtainable for printed circuitry.
- Miniature units are available.
- Solder Lugs can be bent in any position without affecting the capacity setting due to the rigid construction.
- Various types of mounting brackets are available for all trimmers.
- Units can be constructed for special applications.

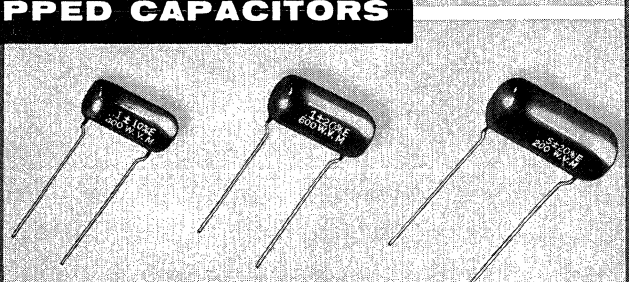


EL-MENCO *MYLAR-PAPER DIPPED CAPACITORS

Only 1 Failure in 14,336,000 Unit-Hours!

- Life tests at 105°C with rated voltage applied have yielded only 1 FAILURE PER 1,433,600 UNIT-HOURS for 1 MFD. Since the number of unit-hours for these capacitors is inversely proportional to the capacitance, 0.1 MFD Mylar-Paper Dipped capacitors will yield only 1 FAILURE PER 14,336,000 UNIT-HOURS!
- Working volts DC: 200, 400, 600, 1000 and 1600.
- Durez phenolic resin impregnated.
- Tolerances: ± 10% and ± 20% (closer tolerances available).
- Dielectric strength: 2 or 2½ times rated voltage, depending upon working voltage.
- Exceed all electrical requirements of E.I.A. specification RS-164 and military specifications MIL-C-91A and MIL-C-25A.

*Registered Trademark of DuPont Co.



EL-MENCO MOLDED MICA CAPACITORS

Superior Performance!

- Unmatched for excellent stability, dielectric strength, high insulation resistance, extremely high "Q" and correspondingly low power factor.
- Units can be subjected to a short "debugging" life test at elevated voltage and temperature for removal of early life failures and for improved reliability.

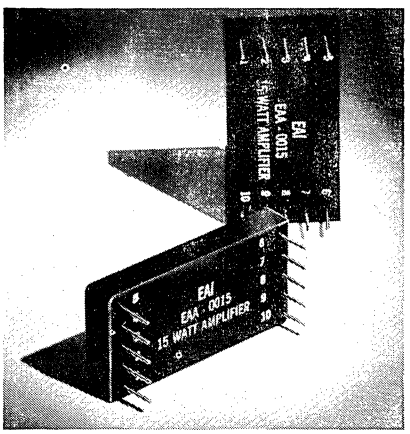
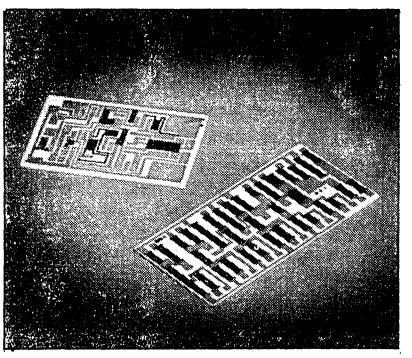
15 WATT CLASS B AUDIO AMPLIFIER EAA-0015



- Rated output power 15W (RMS) @ Tc <50°C TC <50°C
- Frequency Response: Flat 25 Hz to 20 KHz.
- External Component Count Minimized.
- Output Quiescent Current: 7 ma Typical
- Distortion at 1 KHz and P. = 15W: 0.5% Typical
- Input Impedance: 18K Typical
- Noise Output Relative to P. = 15W (input open, BW = 50Hz to 10KHz): −70 db Typical
- $9.05 (100 Lots)

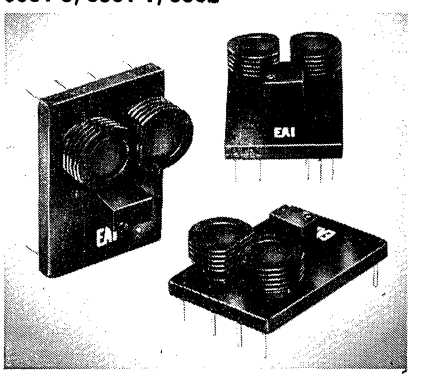
FILTERS AND NETWORKS



Active and passive RC Filters designed by computer techniques — featuring thick film hybrid micro circuits with compensated temperature coefficient.

- Specifically Suitable for Data Communications Equipment
- Functionally Trimmed to Operational Characteristics
- Low Pass, Band Pass: From .001Hz to 100KHz
- Ladder Networks
- R-C Networks: To 0.01% Precision

OPERATIONAL AMPLIFIERS 6851-0/6851-1/6852



Designed specifically for computer analog signal processing and instrumentation applications.

- High DC Gain: 154 db Typical
- Wide Full Signal Bandwidth: 4MHz Typical (unity gain inverter)
- High Slewing Rate: 200V/μs Typical
- High Output Current: 50ma Minimum
- Input Characteristics: Single and Differential
- FET with Pico Amp Input Current and Low T.C. Voltage Coefficient
- Prices Start as Low as $12.00 Each

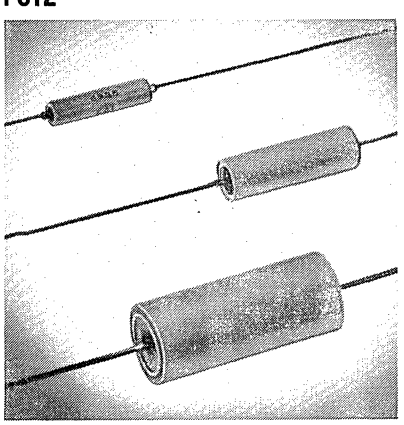
precision capacitors

POLYSTYRENE ZERO T.C. PSTZ

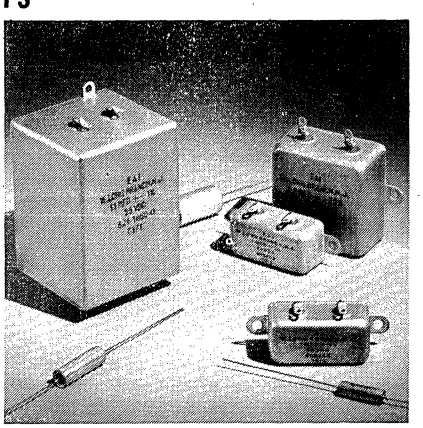


- Temperature Coefficient: As Low as 0 ±10 ppm per Deg. C
- Long Term Stability: Less than 0.05% Deviation per 1 Year
- Operating Temperature Range: Up to 95°C
- Tolerance: As Close as ±.01%
- Typical Price: .033 mfd, ±10%, 100V — $3.54 (100 Lots)

WRAP & FILL CONSTRUCTION MHW & PSW

- Capacitance Tolerance: ±20%, thru ±.5%
- Temperature Range: May be Operated at Rated Voltage from −55°C to +85°C
- Humidity Resistance Meets Requirements of Mil-C-27287, Para. 3.12, in Accordance with Mil Std. 202C, Method 103B, Condition B
- Temperature Coefficient: 100 ±30 ppm/°C Standard, 0 ±30 ppm/°C Upon Request
- Stability: .05% per Year

POLYSTYRENE PS



- Temperature Coefficient: As Low as 0 ±10 ppm/°C
- Insulation Resistance: As High as 10^{12} Ohms per Microfarad
- Dielectric Absorption: Less than 0.01%
- Long Term Stability: Less than 0.01% Deviation in Value Over a Period of One Year
- Operating Temperature Range: Up to 95°C
- Tolerance: As Close as ±0.05%
- Matching Tolerance to ±.01%

"0" TC and controlled capacitance change for stability or matching with pot cores and resistors.

TEMPERATURE COMPENSATING

F-Dyne high quality film dielectric capacitors are designed and manufactured to provide the very best electrical characteristics in the smallest size consistant with reliable performance.

F-Dyne capacitors are readily available in 10 pf capacitance increments, i.e., 430 pf, 440 pf or .18763, .18764, etc. Tolerances may be as low as .25% or .1% with matched pairs.

For fast delivery of standard or special film dielectric capacitors, call F-Dyne — (203) 367-4442.

Application	Catalog Type	Description	Voltage Range	UF Range	Temperature Range	Bulletin Reference	Market Usage
For polar and nonpolar coupling, filtering, decoupling, bypass, energy storage and timing in military and high-performance industrial amplifiers, transmitters, receivers, servo systems, and navigation systems. Hermetic seal available.	29F	Standard and high-voltage tantalum foil; MIL-C-3965: CL20, CL21, CL22, CL23, CL24, CL25, CL26, CL27, CL30, CL31, CL32, CL33, CL34, CL35, CL36, CL37 CL51, CL52, CL53, CL54 Tubular and rectangular	Up to 450 VDC	0.15 to 3500 μf	−55C to 85C or 125C	GEC-1812	Military, Industrial
High-reliability type for military or aerospace use where hermetic seal and extreme reliability are prime factors.	16K	Hermetic seal available	Up to 150 VDC	0.75 to 580 μf	−55C to 125C	Consult GE Sales Engineer	Military
For polar only — where no reverse voltage is expected — coupling, decoupling, filtering, bypass, energy storage and timing in military and high-performance industrial amplifiers, transmitters, receivers, servo systems, and navigation systems.	69F 69F2000	Tantalum porous anode; MIL-C-3965: CL64, CL65, CL55 Tubular and rectangular	Up to 150 VDC	1.7 to 2400 μf	−55C to 85C or 125C	GEC-1814 GEC-1842	Military, Industrial
	69F900	Subminiature tantalum porous anode	Up to 60 VDC	3.3 to 450 μf	−55C to 85C	GEC-1841	
For polar only—where no reverse voltage is expected—coupling, filtering, decoupling, bypass, energy storage and timing in standard and high-performance industrial and entertainment amplifiers, transmitters, receivers, servo systems, and navigation systems, within temperature capabilities.	62F	Porous anode tantalum electrolytic Subminiature Lightest weight Highest volumetric efficiency	Up to 60 VDC	0.01 to 325 μf	−55C to 85C	GEC-1840	Industrial, Entertainment
For bulk filtering and energy storage in military and high-performance or standard industrial power supplies, including computer usage and welding equipment.	86F	High performance, high volumetric efficiency	Up to 450 VDC	75 to 540,000 μf	−40C to 65C, 85C	GEC-1813	Industrial
	88F 92F	Long life, high ripple current	Up to 150 VDC	170 to 150,000 μf	−40C to 85C	Consult GE Sales Engineer	Industrial
For polar coupling, filtering, decoupling, bypass, energy storage and timing in standard and high-performance industrial and entertainment amplifiers, transmitters, receivers, servo systems, and navigation systems, within temperature capabilities.	76F 77F 78F	Miniature aluminum electrolytic	Up to 150 VDC	1 to 790 μf	−20C/ −40C to 85C	GEC-1798 GEC-1843 GEC-1844	Industrial, Entertainment
For filtering, bypass, decoupling, and coupling in entertainment-type radio, TV, high-fidelity systems, and in industrial instruments and test equipment.	43F 87F	Can style and Tubular Aluminum electrolytics for radio, TV, and other communications equipment	Up to 450 VDC	5 to 15,000 μf	−20C to 85C	GEC-1798	Industrial, Entertainment
For circuits in test, measurement, control, and communications equipment of all types, where high-quality film-foil units are an economic choice.	75F	Polyester film-foil roll is epoxy-encapsulated. Welded radial leads. Units have mounting feet and precise dimensions, for high-density packaging.	50 to 600V	.0010 to 1 μf	−55C to 125C	GEC-1816	Industrial

Application	Catalog Type	Description	Voltage Range	UF Range	Temperature Range	Bulletin Reference	Market Usage
For printed-circuit board circuitry where size, weight, cost, and reliability give advantage over metallized film capacitors.	65F	Polyester film and aluminum foil roll, compressed and packaged in a regular epoxy case with radial leads.	50V only	.0010 to 1.5 μf	−55C to 85C	GEC-1834	Industrial
For use where size, weight, cost, and reliability give advantage over metal-clad tubulars, molded, or ceramic case units.	61F 63F AE	Polyester film-foil roll, wrap and-pot, with axial leads. 63F only meets performance requirements of MIL-C-27287.	Up to 300V	.0010 to 2 μf	−55C to 125C	GEC-1833 GEC-1819	Industrial, Military
	74F51	Same as 61F except with polycarbonate film dielectric	100 or 200V	0010 to 1 μf	−55C to 125C	GEC-1798	Industrial
For manufacturing and test equipment, electronic timers and control, communications equipment, and other forms of industrial electronic equipment.	BA	Metallized polyester film roll, wrap-and-pot, with axial leads.	100 or 200V	.010 to 10 μf	−55C to 125C	GEC-1815	Industrial
	74F01	Same as BA except with metallized polycarbonate film.	200V	.010 to 10 μf	−55C to 125C	GEC-1798	Industrial
For energy storage for gas discharge tubes, such as camera attachments.	85F	Aluminum electrolytic photoflash energy-storage capacitors to provide low d-c leakage current and low ESR.	300 to 550 VDC	5 to 700 μf	−20C to 45C	Consult GE Sales Engineer	Industrial, Entertainment
General-purpose d-c capacitors for filtering, blocking, bypass, and arc-suppression in power supplies, control circuits, and other d-c circuit functions.	23F	Paper/Pyranol® in drawn steel cases.	400 to 12,500 VDC, 236 to 1900 VAC	0.05 to 35 μf	−55C to 85C	GEC-1798	Industrial
Specially designed for such SCR applications as phase control, frequency multipliers and changers, power supply filters, time ratio controls, inverters, and rectifier spike suppression.	28F	Paper, metallized paper, and polycarbonate film dielectrics with very low internal losses and high peak current carrying capability.	200 to 2000 VDC, 115 to 700 VAC	0.25 to 150 μf	−55C to 80C	GEA-8688	Industrial
General-purpose a-c capacitors for motor and transformer applications. New Pyranol II impregnant multiplies life and increases reliability.	45F	Paper/Pyranol II in drawn oval cases.	200 to 720 VDC	0.5 to 55 μf	−30C to 70C	GEA-8691	Industrial
For high-voltage d-c rectifier power supply filters, and high-voltage blocking and bypass in communications, radar and other high-voltage circuits.	14F	Paper/Mylar* oil impregnated in all-welded steel rectangular case of leak-proof construction.	5000 to 20,000 VDC	0.67 to 150 μf	−40C to 105C	GEC-1798	Industrial
For light-duty energy storage-discharge duty, such as photoflash applications.	14F	Paper/Pyranol in fabricated steel cases.	1000 to 10,000 VDC	12.5 to 640 μf	0 to 40C	GEC-1798	Industrial

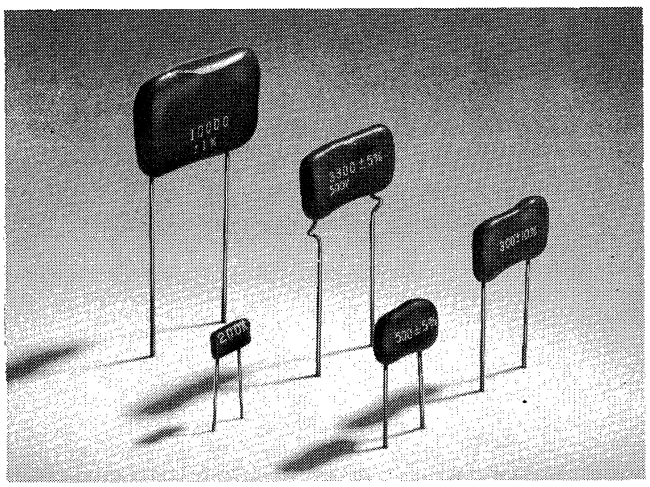
GENERAL ELECTRIC

GENERAL INSTRUMENT

DIPPED SILVER-MICA CAPACITORS MIL-C-5D AND COMMERCIAL GRADES



General Instrument dipped silver-mica capacitors meet or exceed MIL-C-5D and EIA-RS153 requirements. MIL types and RDM types have multiple epoxy-resin coatings for maximum environmental protection. The single dip SRDM type may be used where space is critical and subsequent encapsulation of the circuit will be applied.

The range of standard types and ratings is shown in the table below. Complete technical details appear in Bulletin MC-2.

Production quantities are available from General Instrument Corporation, Capacitor Group, Walnut St., Tazewell, Va. 24651 (Phone 703-988-5551). Contact Miconic Industries, Inc.,135 Eileen Way, Syosett, N.Y. 11791, for the name of the G.I.-Miconics distributor nearest you.

HOW TO SPECIFY:

Commercial MIL-C-5D	*RDM 10 CMO4	B	D	121	K	O	3

* For single coat, add "S" (SRDM). For crimped leads, add "1" (1RDM, 1SRDM).

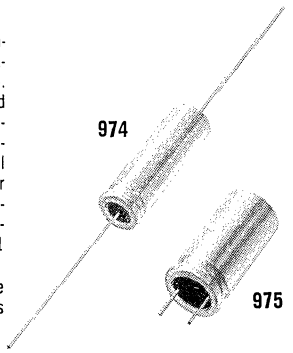
GENERAL INSTRUMENT

ALUMINUM ELECTROLYTIC CAPACITORS

Sub-miniature tubular +85°C

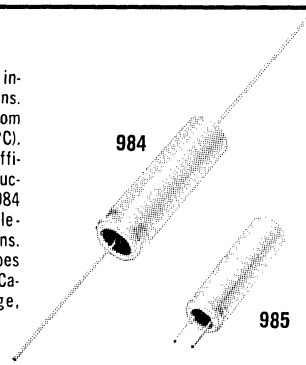
Type 974 and 975 capacitors are industrial quality units rated for continuous operation from −30°C to +85°C. They feature exceptionally low DCL and ESR. All-welded construction is combined with high purity foils in an insulated metal case. The 974 has axial leads. The 975 is single-ended for printed circuit applications. Capacitance range, 1-1800 μF, working voltage, 3-150 VDC. See bulletins EL-101 (974) and EL-105 (975).

Type 974 and 975 capacitors are available from Authorized Miconics Distributors.



Sub-miniature tubular +65°C

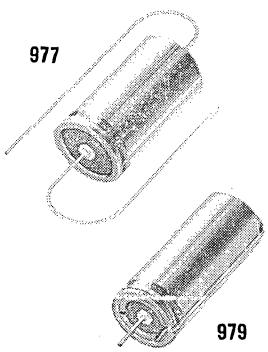
Type 984 and 985 capacitors are intended for entertainment applications. They are rated for continuous duty from −20° C to +65°C (500 hours at +85°C). Both types have high volumetric efficiency and feature all-welded construction in insulated metal cases. The 984 has axial leads while the 985 is single-ended for printed circuit applications. DCL and ESR are very low and all types have extended surge voltage ability. Capacitance range, 1-2500 μF, voltage, 3-150 WVDC. See Bulletin EL-102.



Standard tubular +85°C

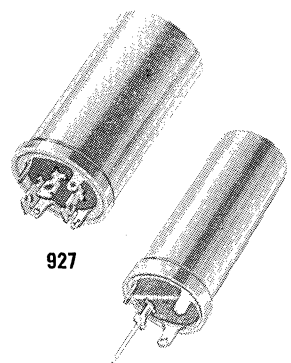
Type 977 capacitors are intended for industrial and entertainment applications and are rated for continuous operation from −20°C to +85°C. A wide range of values are available from 1 to 18,000 μF and 3-450 WVDC in 72 case sizes. Construction is all-welded with insulated (PVC) metal cases standard. Cardboard sleeves and/or mounting straps are available. For printed circuit applications, Type 979 is available with a special mounting wafer. See Bulletin EL-111.

Type 977 capacitors are available from Authorized Miconics Distributors.



Metal case, Twist-mount +85°C

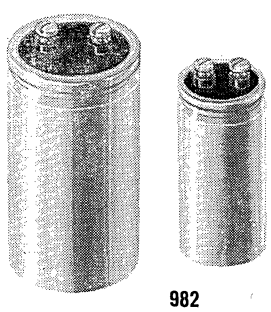
A broad range of metal case electrolytics in twist-mount, printed circuit or special mounting is available in the Type 927 series. Capacitances range from 1 to 30,000 μF and voltages from 3 to 475 WVDC. Operating temperature is −30°C to +85°C. These capacitors conform to EIA Standard RS-154B. Units are supplied in single, dual, triple or quad configuration. For details, see Bulletin EL-109.



High-capacitance (Computer Grade) +85°C

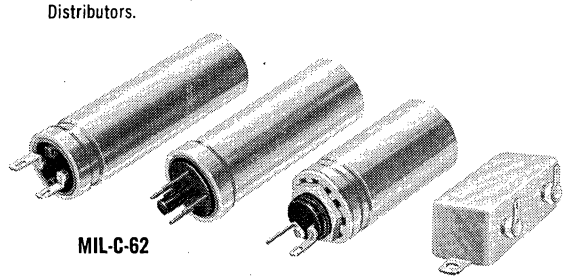
Type 982 capacitors feature very great (up to 570,000 μF) capacitances in compact insulated metal cans. Standard configuration is screw terminals with PVC sleeves. Mylar and acetate sleeves are also available. The standard line of eight cases covers most popular applications. Other cases are available. Capacitance ranges from 2300 μF at 450 WVDC, to 570,000μF at 3 WVDC. The 982 is intended for continuous operation in power supply filters at temperatures up to +85°C. See Bulletin EL-107.

Type 982 capacitors are available from Authorized Miconics Distributors.



Military Grade (MIL-C-62)

General Instrument supplies capacitors to MIL-C-62 in standard metal can and "bathtub" configurations. Extreme manufacturing care is exercised to ensure adherence to specifications. For details, see Bulletin EL-108. Rated for operation from −40°C to +85°C. MIL-C-62 capacitors are available from Authorized Miconics Distributors.



"CRYSTAL-CAP"® MYLAR* CAPACITORS (Patent applied for)

The Type 165 "Crystal-Cap" capacitor is a revolutionary new form of Mylar capacitor. The Mylar dielectric is fused into an integral unit with high purity aluminum foil to achieve unparalleled performance. Insulation resistance is extremely high with DF very low. Capacitance retrace characteristics are excellent. Terminal wires are imbedded into the sealed ends of the capacitors in a unique manner (Patent applied for) to provide a very strong bond.

The "Crystal-Cap" outperforms all typical Mylar "Wrap-and-fill" types in electrical or physical comparisons. Capacitance range, .001-.47μF, 50 to 600 WVDC. Operating temperature: −55°C to +125°C. See Bulletin FC-101.

Type 165 "Crystal-Cap" capacitors are available from Authorized Miconics Distributors.

*Mylar is an E.I. DuPont de Nemours trademark for polyester film.

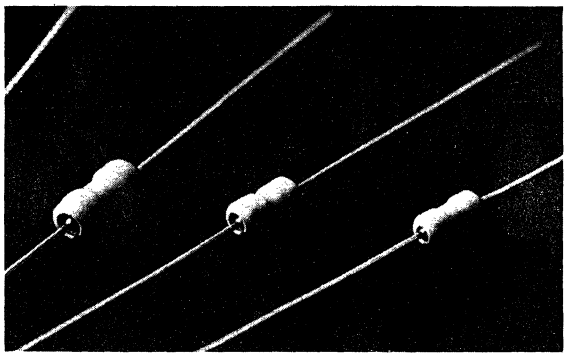
miniature tubular polycarbonate dielectric capacitors

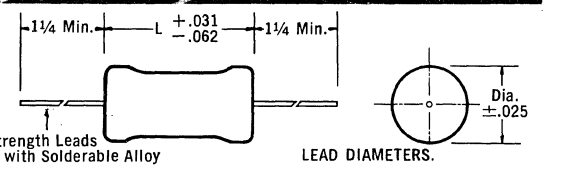
series 357 "PCG"

—55°C to +125°C Without Derating

Sealed in Non-Metallic Cases

100 VDC and 200 VDC





High Strength Leads Coated with Solderable Alloy

LEAD DIAMETERS.
.138 and .170 Diameters: 22 AWG
.204 Diameter and larger: 20 AWG

specifications

DISSIPATION FACTOR:
Less than .25% when measured at or referred to a frequency of 1,000 CPS at +25°C.

INSULATION RESISTANCE:
The minimum insulation resistance when measured with an applied potential of 100 to 200 volts, but not to exceed the rated voltage, shall be as follows:

TEMPERATURE	MEGOHMS MINIMUM
At + 25°C	150,000
At + 85°C	15,000
At +125°C	1,000

TEST VOLTAGE:
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25%, ±5°C.

ACCELERATED LIFE TEST:
Shall withstand an accelerated life test of 250 hours with 140% of the voltage rating, applied at the applicable high ambient temperature, per MIL-C-25C. Not more than one failure in 18 pieces tested shall be allowed.

VOLTAGE RATINGS:
These capacitors are designed to operate over the temperature range of −55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
200 VDC	100 VDC
100 VDC	50 VDC

LEAD PULL TEST:
These capacitors shall withstand a five (5) pound pull applied axially for one minute.

LEAD BEND TEST:
Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and the 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE:
The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP. CHANGE
− 55°C	−2% Maximum
+ 85°C	±1.25% Maximum
+125°C	±2% Maximum

HUMIDITY TEST:
Series 357 capacitors are not intended to be operated where humidity is a problem. This series is intended for use in circuits which are encapsulated or hermetically sealed.

MARKING:
Small size of units limits marking information to the following: capacity, voltage, series prefix (357), Gudeman or trademark.

SPECIAL CAPACITORS:
Capacitance values, voltages and sizes not listed in this bulletin will be furnished upon request.

specifications

CAPACITANCE AND TOLERANCE

The capacitance limits at +25°C are determined by the specified tolerance. Capacitors are measured at or referred to a frequency of 1000 cps.

DISSIPATION FACTOR

Less than .15% at 1000 cps. at +25°C.

INSULATION RESISTANCE

The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd.	R X C Megohms X mfd.	R Megohms
+25°C	Greater than .5	50,000	
	Smaller than .5		100,000
+85°C	Greater than .5	5,000	
	Smaller than .5		10,000
+125°C	Greater than .5	500	
	Smaller than .5		1,000

TEST VOLTAGE

Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C.

ACCELERATED LIFE TEST

Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:

A) If the capacitor has a short or open circuit.
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 50% of the specified value above.
D) If the DF is greater than 20% of its initial specified value.

TEMPERATURE AND IMMERSION CYCLING

Shall meet all requirements of the applicable paragraph of the latest issue of MIL-C-19978.

MOISTURE RESISTANCE

Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-19978.

VIBRATION

Designed to withstand the Grade 3 vibration tests of the applicable paragraph of the latest issue of MIL-C19978.

A-C VOLTAGE RATING:

(—55°C to +85°C Ambient)

D-C Voltage Rating	400 cps
100	65
200	120
300	200
400	240
600	250

LEAD PULL TEST

Shall withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST

The leads shall withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE

The change of capacitance with reference to the actual value at +25°C does not exceed the following limits.

TEMPERATURE	CHANGE OF CAPACITANCE
—55°C to +125°C	2%

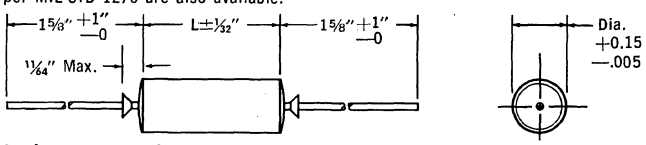
HERMETICALLY SEALED (GLASS-TO-METAL) MINIATURE METAL CASE —55°C TO +125°C WITHOUT DERATING 100 VDC THRU 600 VDC

outline drawing

Standard leads consist of solid, bare, tinned wire. Nickel or gold plated leads per MIL-STD 1276 are also available.



Leads: 22 gauge: .235 and .312 Dia.; 20 gauge: .400 and larger
For sleeving add .032 to dia. and 1/16 to the nominal case length.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors are measured or referred to a frequency of 1000 CPS.

DISSIPATION FACTOR
Less than .3% from +25°C to +125°C at 1000 CPS.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The electrification time is two minutes. Minimum values are:

Temperature	Nominal Capacitance MFD	R X C Megohms X MFD	R Megohms
+25°C	Greater than .5	25,000	
	Smaller than .5		50,000
+125°C	Greater than .5	200	
	Smaller than .5		500

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 1000 hours with 140% of applied rated voltage at +125°C with one failure allowed in 18 capacitors tested. A failure is defined as:
A. If the capacitor has a short or open circuit
B. If the capacitance has changed more than 1.5% from its original measured value
C. If the insulation resistance is less than 50% of the specified value at +25°C
D. If the DF is greater than .5% at +25°C

TEMPERATURE AND IMMERSION CYCLING
Meets the requirements of the applicable paragraph of MIL-C-19978.

MOISTURE RESISTANCE
Meets the requirements of the applicable paragraph of MIL-C-19978.

VIBRATION
Shall withstand Grade 3 vibration tests of the applicable paragraph of MIL-C-19978.

AC VOLTAGE RATING (—55°C to +105°C Ambient)

DC VOLTAGE RATING	AC VOLTAGE RATING @400 CPS
100	70
200	140
400	240
600	330

LEAD PULL TEST
Shall withstand a steady pull force of 5 lbs. applied axially for one minute.

LEAD BENDING TEST
The leads shall withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
Values below are guaranteed performance. Typical values are lower than those stated.

Rated Voltage	Temperature	Maximum Capacitance Change*
100VDC - 200VDC	+25°C to +125°C	+ .5 % — .75%
100VDC - 200VDC	+25°C to —55°C	— .25% —1.5 %
400VDC - 600VDC	+25°C to +125°C	+1.5 % — .75%
400VDC - 600VDC	+25°C to — 55°C	—1.0 % —1.5 %

*For capacitance values greater than .01 mfd. Values of .01 mfd. and less exhibit same change as 400-600 VDC units.

"204" indicates "floating." Substitute "203" for "Grounded."
Add following to Part No. for tolerance: —20 = ±20% (Std.); —10 = ±10%; —5 = ±5%.

specifications

INSULATION RESISTANCE

The minimum insulation resistance when measured with an applied potential of 100 volts and an electrification time of two minutes shall be as follows:

At 25°C—75,000 megohm-mfds. minimum, but need not exceed 200,000 megohms
At 85°C—4000 megohm-mfds. minimum, but need not exceed 8000 megohms.
At 125°C—250 megohm-mfds. minimum, but need not exceed 500 megohms.
At 165°C—50 megohm-mfds. minimum, but need not exceed 100 megohms.

NOTE—The above IR characteristics are very conservative and it can be generally expected that they will be much higher than specified. The Gudeman engineering dept. believes that in introducing a new line of capacitors a conservative view point be maintained, thereby proffering a component which will offer the greatest degree of reliability.

POWER FACTOR

The power factor of these capacitors shall be no greater than .5 percent when measured at 1000 cps at 25°C.

ACCELERATED LIFE TEST

These capacitors shall withstand an accelerated life test of 250 hours at 165°C with an applied voltage of 140 percent of rated voltage on units not exceeding .05 watt seconds.

One failure in 12 samples permitted.

TEST VOLTAGE

These capacitors shall withstand a DC voltage equal to 200 percent of the rated voltage for one minute at a temperature of 25°C.

MOISTURE RESISTANCE AND VIBRATION

These capacitors shall meet the requirements for Moisture Resistance and Vibration of Specification MIL-C-25A.

CAPACITANCE CHANGE

The capacitance change shall not be greater than —2 percent to +6 percent from —65°C to +165°C when compared to the nominal value measured at +25°C.

specifications

DISSIPATION FACTOR

Less than 1.0% when measured at or referred to a frequency of 1000 CPS at +25°C, per MIL-C-25C.

INSULATION RESISTANCE

The minimum insulation resistance when measured with an applied potential of 50 to 500 volts, but not to exceed the rated voltage, shall be as follows:

At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms.
At + 85°C 1000 megohm-mfds minimum but need not exceed 6000 ohms.
At + 125°C 50 megohm-mfds minimum but need not exceed 300 megohms.

TEST VOLTAGE

Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C.

ACCELERATED LIFE TEST

Shall withstand an accelerated life test of 250 hours with 140% of the voltage rating, applied at the applicable high ambient temperature, per MIL-C-25C.

The 355, and 338 series capacitors are furnished with high strength leads coated with a solderable alloy in the sizes shown below:

355 SERIES	GAUGE	338 SERIES
Up to .156 Dia.	#24 AWG	"T" Dim. up to .156
.156 Dia. to .375 Dia.	#22 AWG	"T" Dim. .156 to .375
.375 to .750 Dia.	#20 AWG	"T" Dim. .375 to .750
Greater than .750 Dia.	#18 AWG	"T" Dim. Over .750

MOISTURE RESISTANCE

Shall withstand the moisture resistance requirements as specified in military specification MIL-C-25C.

VIBRATION-ACCELERATION

Shall withstand the Grade 3 vibration-acceleration requirements of MIL-C-25C.

VOLTAGE RATINGS

Designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
600 VDC	300 VDC
400 VDC	200 VDC
200 VDC	150 VDC
150 VDC	100 VDC
50 VDC	50 VDC

LEAD PULL TEST

Shall withstand a five (5) pound pull applied axially for one minute, per MIL-C-25C.

LEAD BEND TEST

Shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction, per MIL-C-25C.

CAPACITANCE CHANGE WITH TEMPERATURE

The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP. CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

DIM. TOLERANCES:
Add following to Part No. for tolerance: —M = ±20%; —K = ±10%; —J = ±5%; —B = ±2%.
Add prefix "F" to specify outer fibreglas wrap in lieu of Mylar.

GUDEMAN

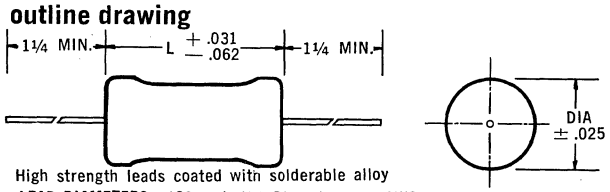
a division of
Gulton Industries, Inc.
340 W. HURON STREET, CHICAGO, ILLINOIS 60610 • AREA CODE 312 337-7400 • TWX 910-221-3863

miniature "mylar"* dielectric

series 356

"BLUE-R"® TUBULAR
SEALED IN NON-METALLIC CASES
—55°C TO +125°C
80 VDC TO 600 VDC

outline drawing



High strength leads coated with solderable alloy
LEAD DIAMETERS: .138 and .170 Diameters: 22 AWG
.204 Diameter and larger: 20 AWG

specifications

DISSIPATION FACTOR
The dissipation factor shall not exceed 1.0% when measured at or referred to a frequency of 1,000 CPS at +25°C.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of 80 to 500 volts, but not to exceed the rated voltage, shall be as follows:

At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms.
At + 85°C 5,000 megohms-mfds minimum but need not exceed 15,000 ohms.
At + 125°C 50 megohms-mfds minimum but need not exceed 300 megohms.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25%, ±5°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of the voltage rating, applied at the applicable high ambient temperature, per MIL-C-25C. Not more than one failure in 18 pieces tested shall be allowed.

VOLTAGE RATINGS
These capacitors are designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
600 VDC	300 VDC
400 VDC	200 VDC
200 VDC	150 VDC
80 VDC	50 VDC

MOISTURE ASSISTANCE
Capacitors shall withstand 500 hours of 95% relative humidity at 40°C. Voltage will not be applied. Upon completion of test, units will be dried for four hours. Minimum insulation resistance at 25°C. will be 25,000 megohm-mfds but need not exceed 75,000 megohms. Not more than one failure in 12 shall be permitted.

MARKING
Small size of units limits marking information to the following: capacity, voltage, series prefix (356), Gudeman or trademark.

LEAD PULL TEST
Shall withstand a five (5) pound pull applied axially for one minute.

LEAD BENDING TEST
Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP. CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

80 VDC

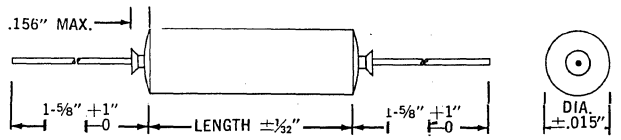
TUBULAR METALLIC CASES
—55°C TO +85°C WITHOUT DERATING
30 VDC THRU 600 VDC

outline drawing



Grounded circuits are available in all sizes: for grounded length subtract 1/16 inch from catalog length.

Case Diameter (Inches)	Lead Gauge (AWG)
.175 and .195	24
.235 and .312	22
.400 and up	20

Standard leads consist of solid, bare, tinned wire. Special nickel leads are available for applications requiring a higher degree of weldability.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at ±25°C are determined by the specified tolerance. Capacitors which have a nominal value of 1 MFD or less are measured or referred to a frequency of 1000 cps. Nominal capacitances above 1 MFD are measured at or referred to a frequency of 60 cps.

DISSIPATION FACTOR
Less than 0.6% at +25°C.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd	R X C Megohms X Mfd	R Megohms
25°C	Greater than .5	50,000	
	Smaller than .5		100,000
85°C	Greater than .1	5,000	
	Smaller than .1		50,000
125°C	Greater than .02	100	
	Smaller than .02		5,000
150°C	Greater than .01	10	
	Smaller than .01		1,000

TEST VOLTAGE
Designed to withstand a test potential equal to 200% of the rated voltage for two minutes at 25°C.
The test voltage must be applied and discharged through a current limiting resistance of approximately 1000 ohms.

VOLTAGE RATING ABOVE 85°C
Derate above +85°C at a rate of 1.2% of rated voltage per degree C.

ACCELERATED LIFE TEST
Capacitors are designed to withstand a test potential equal to 140% of the rated voltage at the test temperature used for a period of 250 hours. One failure in 25 samples tested is permitted. The life test voltage must be applied and discharged through a current limiting resistance of approximately 1,000 ohms.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

VIBRATION
Designed to withstand the Grade 3 vibration tests of the applicable paragraph of the latest issue of MIL-C-25.

AC VOLTAGE RATING
Designed to operate safely up to the following AV voltages at 85°C.

NOMINAL VOLTAGE VDC	AC — VOLTAGES AT 85°C (rms)	
	Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
400	280	110
600	420	160

For 105°C operation the listed AC voltages should be derated to 60% of the 85°C values.
If both AC and DC voltages are present the sum of the DC voltage and the amplitude of the AC voltage must not exceed the specified DC-rating at a given temperature.

LEAD PULL TEST
Designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

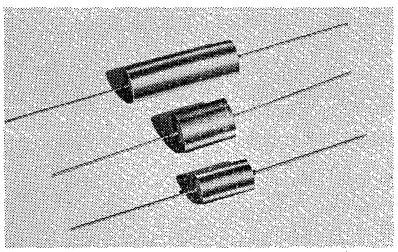
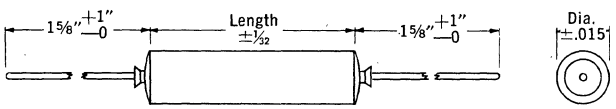
series 371

HERMETICALLY SEALED (GLASS TO METAL)
TUBULAR METAL CASE
—55°C TO +200°C WITHOUT DERATING
200 VDC THRU 600 VDC



outline drawing



LEAD SPECIFICATIONS: Solid tinned leads 1⅝" long +1" —0 tolerance. No. 22 AWG for .235" and .312" Dia. cans. No. 20 AWG for larger case diameters. For Series F371 (Both Terminals Insulated From Case) add 1/16" to above case length for diameters larger than .400". For diameters .400 and smaller add 3/32" to above case length.

specifications

DISSIPATION FACTOR
Maximum dissipation factor shall be 0.1% at +25°C when measured at a frequency of 1000 CPS. Maximum dissipation factor shall be 0.2% at +200°C.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of between 200 and 500 volts and an electrification time of 2 minutes, but never greater than rated voltage shall be as follows:

At + 25°C 125,000 megohm-mfds capacitance values .5 MFD and greater.
250,000 megohms for cap. values below .5 MFDS.
+ 85°C 40,000 meg-mfds for cap. values 1. MFD and greater.
40,000 megohms for cap. values below 1. MFD.
+ 125°C 5,000 meg x mfds for cap. values .25 MFD and greater.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for 2 minutes. Test voltage will be applied and discharged through a current limiting resistor of one Ohm per volt.

LIFE TEST VOLTAGE
Shall withstand an accelerated life test of 250 hours at +200°C and 140% of rated voltage. One failure in 12 samples permitted.

CAPACITANCE DRIFT
Capacitance will drift less than 2% from its initial value at 25°C after being temperature cycled from —55°C to 200°C.

CAPACITANCE "Q"
The "Q" of Gudeman Series 371 will average 5000 up to +125°C and will exceed 500 at +200°C.

DIELECTRIC ABSORPTION
At +25°C less than .05% of the initial 100 volts charging voltage shall reappear after charging for ½ hour and immediately discharging for 10 seconds through a one ohm resistor. Absorption voltage should be read 5 minutes, but not later than 10 minutes, after removing shorting bar. Percent dielectric absorption = V absorption / V charge x 100.

MOISTURE RESISTANCE AND VIBRATION
Shall meet the requirements for moisture resistance and vibration of Specification MIL-C-25A.

CAPACITANCE CHANGE WITH TEMPERATURE
Capacitance change shall not be greater than —4% at 200°C or +2.5% at —55°C relative to the nominal value at +25°C.

200 VDC

specifications

CAPACITANCE AND TOLERANCE

The capacitance limits at +25°C are determined by the specified tolerance.

Capacitance is measured at or referred to a frequency of 1000 Hz.

DISSIPATION FACTOR

The dissipation factor at +25°C is less than 0.3% at 1000 Hz.

INSULATION RESISTANCE

The charging potential is equal to the specified operating voltage for a given temperature. The electrification time is two minutes. Listed below are minimum values:

TEMPERATURE	CAPACITANCE (mfd.)	RXC (megohms x mfd.)	R (megohms)
25°C	>.5	100,000	
	<.5		200,000
125°C	>.5	1000	
	<.5		2000

ACCELERATED LIFE TEST

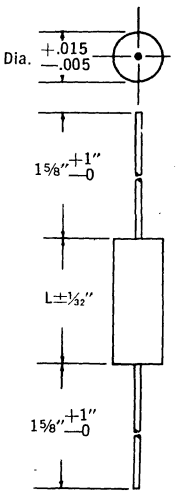
Capacitors shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 18 capacitors tested shall be allowed. A failure is defined as the following:

A) If the capacitor has "opened."

B) If the capacitance has changed more than 5% from its original value.

C) If the insulation resistance is less than 50% of its original value.

Series 409



Dim. Include Solder Eyelet

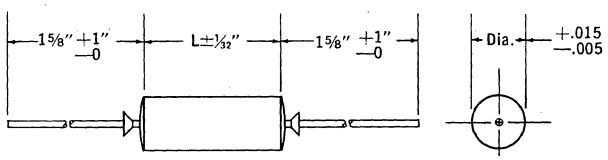
miniature metallized polycarbonate dielectric

series 410

HERMETICALLY SEALED (GLASS-TO-METAL) TUBULAR METALLIC CASES
—55°C TO +125°C WITHOUT DERATING
100 TO 400 VDC

outline drawing



Standard leads consist of solid, bare, tinned wire. Special nickel leads are available for applications requiring a higher degree of weldability.

LEADS: 24 gauge: .175 and .195 Dia.; 22 gauge: .235 and .312 Dia.; 20 gauge: .400 Dia. and larger case sizes.

For sleeving add .020 max. to Dia. and .032 +.032 −.015 extension to each end of capacitor.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors are measured or referred to a frequency of 1000 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 0.3% at 1000 cps.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd	R X C Megohms X mfd	R Megohms
25°C	Greater than .5	100,000	
	Smaller than .5		200,000
125°C	Greater than .5	1,000	
	Smaller than .5		2,000

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C. Test will be applied through resistor of 1 ohm per volt.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-18312.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 18 capacitors tested shall be allowed. A failure is defined as the following.
A) If the capacitor has "opened."
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 50% of its original value.
(D) If the DF is greater than 1%.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-18312.

VIBRATION
Designed to withstand the Grade 3 vibration tests of the applicable paragraph of the latest issue of MIL-C-18312.

A-C VOLTAGE RATING:
(—55C to +85C Ambient)

D-C Voltage Rating	400 cps
100	65
200	120
300	200
400	240

LEAD PULL TEST
Designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads shall withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at +25°C does not exceed the following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
—55°C	2%
+125°C	1%

100 VDC

"thinfilm" metallized polycarbonate dielectric

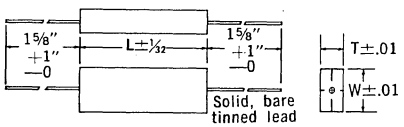
series 317 & 318

ULTRAMINIATURE
SEALED IN RECTANGULAR EPOXY CASES
—55°C TO +125°C WITHOUT DERATING
SERIES 317 AXIAL LEADS
SERIES 318 RADIAL LEADS

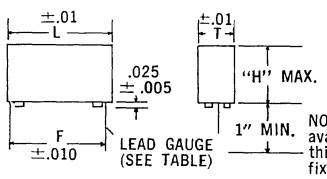
outline drawings

Series 317

See Part No. Table for Lead Gauge.
Dimensions noted in inches.



Series 318



NOTE: .42x.31x18 cases have one round standoff between leads.
.55 x .31 x 18 has two standoffs between leads.

NOTE: Nickel "A" weldable leads are available with capacitors specified in this bulletin, add letter "W" as a suffix on the part number.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitance is measured at or referred to a frequency of 1000 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 0.5% at 1000 cps.

INSULATION RESISTANCE
The minimum insulation resistance when measured at rated voltage but not to exceed 500 VDC shall be as follows:
At + 25°C 100,000 megohm-mfds minimum but need not exceed 200,000 megohms.
At +125°C 100 megohm-mfds minimum but need not exceed 2000 megohms.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ± 5°C. Test will be applied through resistor of 1 ohm per volt.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:
A) If the capacitor has "opened".
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 30% of its original specified value.
D) If the dissipation factor is greater than 1%.

HUMIDITY TEST
Capacitors shall withstand 250 hours of 95% relative humidity at 40°C. Voltage will not be applied. Upon completion of test, units will be dried for four hours.
Minimum product of insulation resistance @ 25°C shall be 33% of the original specified value.
The capacitance is not to change more than 5% of its original value.
The dissipation factor shall not exceed 1.5%.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at +25°C shall not exceed ± 2%.

specifications

CAPACITANCE AND TOLERANCE

The capacitance limits at +25°C are determined by the specified tolerance.
Capacitors are measured or referred to a frequency of 1000 cps.

DISSIPATION FACTOR

The dissipation factor at +25°C shall be less than 0.5% at 1000 cps.

INSULATION RESISTANCE

The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd.	R X C Megohms X mfd.	R Megohms
25°C	Greater than .5	50,000	
	Smaller than .5		100,000
125°C	Greater than .5	500	
	Smaller than .5		1,000

TEST VOLTAGE

Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C. Test voltage will be applied through resistor of 1 ohm per volt.

ACCELERATED LIFE TEST

Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:

A) If the capacitor has "opened."
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 50% of the original specified value.
D) If the DF is greater than 1%.

HUMIDITY

Not intended to be operated where humidity is a problem. This series is intended for use in circuits which are encapsulated or hermetically sealed.

LEAD PULL TEST

These capacitors shall withstand a five (5) pound pull applied axially for one minute, per MIL-C-25.

LEAD BEND TEST

Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position and then 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMP.

The change of capacitance with reference to the actual value at 25°C will not exceed the following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	—2%
+125°C	±1%

SERIES 397

100 VDC TO 200 VDC
SERIES 322 — RADIAL LEADS
SERIES 323 — AXIAL LEADS

specifications

DISSIPATION FACTOR
The dissipation factor shall not exceed 1.0% when measured at or referred to a frequency of 1,000 CPS at +25°C. Nominal capacitance values above 1.0 mfd. are measured at or referred to a frequency of 60 cps.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of 50 to 200 volts, but not to exceed the rated voltage, shall be as follows:
At +25°C 10,000 megohm-mfds. minimum but need not exceed 30,000 megohms.
At +85°C 500 megohm-mfds. minimum but need not exceed 3000 megohms.
At +125°C 10 megohm-mfds. minimum but need not exceed 150 megohms.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed.
A failure is defined as the following:
A) If the capacitor has "opened" or short circuited.
B) If the capacitance has changed more than 10% from its original value.
C) If the insulation resistance is less than 30% of its specified value.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C±5°C.

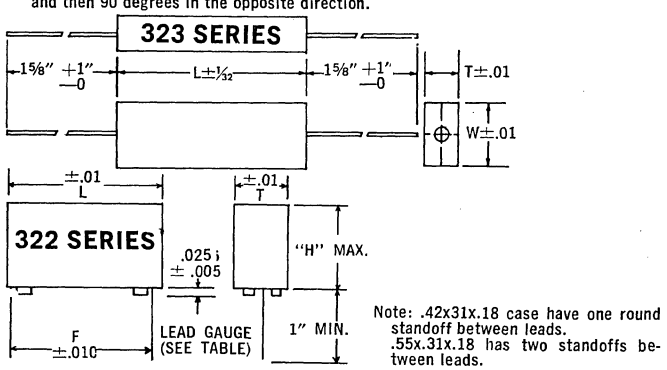
VOLTAGE RATINGS
Designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
200VDC	100VDC
100VDC	50VDC

HUMIDITY TEST
Capacitors shall withstand 250 hours of 95% relative humidity at 40°C. Voltage will not be applied. Upon completion of test, units will be dried for four hours. Minimum product of insulation resistance shall be 5000 megohm-mfd but need not exceed 15,000 megohms.
The capacitance will change not more than 10% of its original value. The dissipation factor shall not increase over 1.5%.

LEAD PULL TEST
Shall withstand a five (5) pound pull applied axially for one minute.

LEAD BEND TEST
Leads shall be bent without breakage about the point of the egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction.



Note: .42x31x.18 case have one round standoff between leads. .55x.31x.18 has two standoffs between leads.

NOTE: Nickel "A" weldable leads are available, simply add the letter "W" as a suffix on the part number.

Note: Larger case sizes may be supplied in plastic case material other than epoxy. Add following to part no. for tolerance: —M = ±20%; —K = ±10%; —J = ±5%; —B = ±2%.

"thinfilm" metallized mylar* dielectric

series 363 & 364

ULTRA MINIATURE FLAT AND TUBULAR CAPACITORS SEALED IN NON-METALLIC CASES with PLASTIC RESIN END SEALS —55°C TO +125°C 100 VDC TO 600 VDC

specifications

DISSIPATION FACTOR
The dissipation factor shall not exceed 1.0% when measured at or referred to a frequency of 1,000 CPS at +25°C per MIL-C-25C. Nominal capacitance values above 1.0 mfd. are measured at or referred to a frequency of 60 cps.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of 50 to 500 volts, but not to exceed the rated voltage, shall be as follows:

At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms
At + 85°C 500 megohm-mfds minimum but need not exceed 3000 megohms
At + 125°C 10 megohm-mfds minimum but need not exceed 150 megohms

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated vol age for one minute at a temperature of +25°C, ± 5°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:

A) If the capacitor has "opened" or short circuited.
B) If the capacitance has changed more than 10% from its original value.
C) If the insulation resistance is less than 30% of its original value.

VOLTAGE RATINGS
Designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
400 VDC	200 VDC
200 VDC	100 VDC
100 VDC	50 VDC

MOISTURE RESISTANCE
Shall withstand the moisture resistance requirements as specified in military specification MIL-C-25C.

VIBRATION-ACCELERATION
These capacitors shall withstand the Grade 3 vibration-acceleration requirements of MIL-C-25C.

LEAD PULL TEST
Shall withstand a five (5) pound pull applied axially for one minute, per MIL-C-25C.

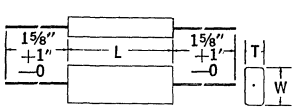
LEAD BEND TEST
Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction, per MIL-C-25C.

CAPACITANCE TEST WITH TEMPERATURE
The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

outline drawings

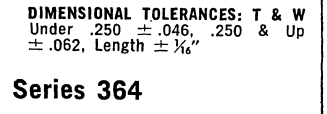
Series 363



NOTE: Nickel "A" weldable leads are available with the capacitors specified in this bulletin, simply add the letter "W" as a suffix on the part number.

DIMENSIONAL TOLERANCES: T & W Under .250 ± .046, .250 & Up ± .062, Length ± 1/16"

Series 364



DIMENSIONAL TOLERANCES: Under .250 dia. ± .046, .250 dia and up ± .062, length ± 1/16"

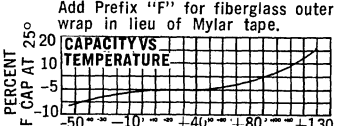
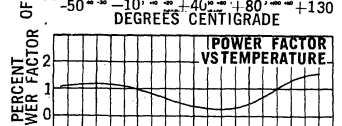
*60VDC RATING @ +85°C
*30VDC RATING @ +125°C

Add following to Part No. for Tolerance: —M = ±20%; —K = ±10%; —J = ±5%; —B = ±2%.
Add Prefix "F" for fiberglass outer wrap in lieu of Mylar tape.

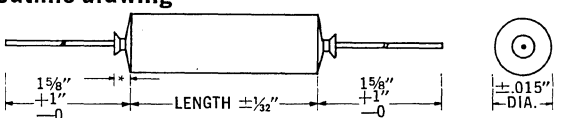




GUDEMAN a division of Gulton Industries, Inc.
340 W. HURON STREET, CHICAGO, ILLINOIS 60610 • AREA CODE 312 337-7400 • TWX 910-221-3863

miniature metallized mylar* dielectric
series 68
HERMETICALLY SEALED (GLASS-TO-METAL) TUBULAR METALLIC CASES —55°C TO +125°C WITHOUT DERATING 100 VDC THRU 600 VDC

outline drawing



* .093 max for .125 dia otherwise .156 max

Standard leads consist of solid, bare, tinned wire. Special nickel leads are available for applications requiring a higher degree of weldability.

Case Diameter (Inches)	Lead Gauge (AWG)
.125 thru .187	24
.235 and .312	22
.400 and up	20

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at 25°C are determined by the specified tolerance. Capacitors which have a nominal valu of 1 MFD or less are measured or referred to a frequency of 1000 cps. Nominal capacitances above 1 MFD are measured at or referred to a frequency of 60 cps.

DISSIPATION FACTOR
The dissipation factor at 25°C is less than 1.0%. Reference frequencies are as specified above.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance MFD	R x C Megohms x MFD	R Megohms
25°C	Greater than .333	50,000	
	Smaller than .333		150,000
85°C	Greater than .167	500	
	Smaller than .167		3,000
125°C	Greater than .067	10	
	Smaller than .067		150

TEST VOLTAGE
Designed to withstand a test potential equal to 200% of the rated voltage for two minutes at 25°C.
The test voltage must be applied and discharged through a current limiting resistance of approximately 1000 ohms.

VOLTAGE RATING ABOVE 85°
No derating of the voltage is required for nominal ratings of 200, 400 and 600 VDC. All 100 VDC capacitors, however, are to be derated above 85°C at the rate of 1 VDC per degree C.

ACCELERATED LIFE TEST — AT 125°C
Capacitors are designed to withstand a test potential equal to 140% of the voltage at 125°C for a period of 250 hours.
The life test voltage must be applied and discharged through a current limiting resistance of approximately 1000 ohms.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

VIBRATION
Designed to withstand the vibration tests of the applicable paragraph of the latest issue of MIL-C-25.

LEAD PULL TEST
Capacitors of this series are designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at 25°C does not exceed the following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	— 8%
+ 85°C	+ 5%
+125°C	+18%

AC VOLTAGE RATING
Designed to operate safely up to the following AC voltages at 85°C.

DC VOLTAGE RATING	AC — VOLTAGES AT 85°C (rms) Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
400	280	110
600	420	160

For 105°C operation the listed AC voltages should be derated to 60% of the 85°C values.
If both AC and DC voltages are present, the sum of the DC voltage and the amplitude of the AC voltage must not exceed the specified DC-rating at a given temperature.

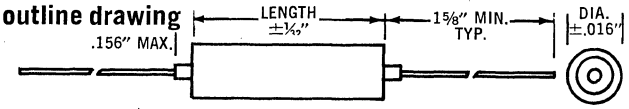
polyester & kraft capacitor tissue dielectric

series 51

WAX IMPREGNATED — METALLIZED DIELECTRIC
HERMETICALLY SEALED (GLASS TO METAL)
TUBULAR METAL CASE
—55°C TO +125°C WITHOUT DERATING
100 THRU 600 VDC

outline drawing



Standard leads consist of solid, bare, tined wire. Special Nickel leads are available for applications requiring a higher degree of weldability.

LEAD SPECIFICATIONS

Case Diameter (inches)	Lead Gauge (AWG)
.187	24
.235 and .312	22
.400 and up	20

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors which have a nominal value of 1 MFD or less are measured at or referred to a frequency of 1000 cps. Nominal capacitances above 1 MFD are measured at or referred to a frequency of 60 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 1.0%. Reference frequencies are as specified above.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes.

TEMPERATURE	Nominal Capacitance MFD	Voltage VDC	R x C Megohms x MFD	R Megohms
+ 25°C	Greater than .167	ALL	2,000	
	Smaller than .167			12,000
+ 125°C	Greater than .067	100 thru	10	
	Smaller than .067	300 VDC		150
	Greater than .067	400 and	40	
	Smaller than .067	600 VDC		600

TEST VOLTAGE
Designed to withstand a test potential equal to 200% of the rated voltage for two minutes at + 25°C.
The test voltage must be applied and discharged through a current limiting resistance of approximately 1,000 ohms.

VOLTAGE RATING ABOVE 85°C.
No derating of the voltage is required for nominal ratings of 200 through 600 VDC. All 100 VDC capacitors, however, are to be derated above + 85°C at the rate of 1 VDC per degree C.

ACCELERATED LIFE TEST — AT 125°C
Designed to withstand a test potential equal to 140% of the rated voltage at + 125°C for a period of 250 hours.
The life test voltage must be applied and discharged through a current limiting resistance of approximately 1,000 ohms.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

VIBRATION
Designed to withstand the vibration tests of the applicable paragraph of the latest issue of MIL-C-25.

AC OPERATION
51 Series capacitors are designed to operate up to the following AC voltages.

NOMINAL VOLTAGE VDC	AC VOLTAGES AT + 85°C (rms) Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
300	220	96
400	280	110
600	420	160

For + 105°C operation the listed AC voltages should be derated to 60% of the + 85°C values.
If both AC and DC voltages are present, the sum of the DC voltage and the amplitude of the AC voltage must not exceed the specified DC rating at a given temperature.

LEAD PULL TEST
Capacitors of this series are designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at 25°C does not exceed the following limits.

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	— 10%
+ 85°C	+ 4%
+ 125°C	+ 13%

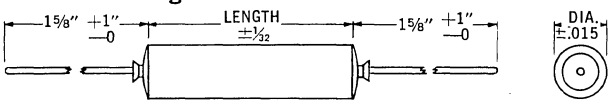
outline drawing



Solid Tinned Wire Leads.
The folowing lead sizes will apply:
.235 and .312 diameter #22 AWG
.400 diameter and up #20 AWG
NOTE: Mounting by means of lead wires is not recommended for units larger than .562 x 1 13/16" long
NF STYLE WILL BE FURNISHED WITH #22 AWG LEADS.

specifications

CAPACITANCE AND TOLERANCE
The capacitance shall be within the specified tolerance limits of the nominal rating.
Capacitors of 1.0 MFD or less shall be measured at, or referred to, a frequency of 1000 cycles per second at 25°C. Capacitors greater than 1.0 MFD shall be measured at, or referred to, a frequency of 60 cycles per second at 25°C.

DISSIPATION FACTOR
The dissipation factor shall be a maximum of 1.0% at 25°C.
Capacitors of 1.0 MFD or less shall be measured at, or referred to, a frequency of 1000 cycle per second. Capacitors above 1.0 MFD shall be measured at, or referred to, a frequency of 60 cycles per second.

INSULATION RESISTANCE
Insulation resistance shall be measured at a charging potential of 50 VDC.
The insulation resistance shall equal or exceed the following for capacitance values up to and including 4.0 MFD.

Temperature	Tolerance
25°C	4000 megohms X mfd or 12,000 megohms, whichever is less
85°C	100 megohms X mfd or 300 megohms, whichever is less
125°C	10 megohms X mfd or 150 megohms, whichever is less

For values above 4.0 MFD, the insulation resistance shall equal or exceed the following:

Temperature	Tolerance
25°C	2000 megohms X mfd
85°C	50 megohms X mfd
125°C	5 megohms X mfd

TEST VOLTAGE
Shall withstand a D.C. potential of 200% of rated D.C. voltage at a temperature of 25°C applied for a period not to exceed two minutes, without permanent breakdown.
When the case is not a terminal, they shall withstand a D.C. potential of 200% of rated voltage between the case and the terminals.

LIFE TEST
Shall withstand a test potential of 140% of the rated D.C. voltage at 125°C for 250 hours.
One failure out of twelve (12) samples tested is allowed. A capacitor will be considered to have failed when:
A. The capacitance has changed more than 10% from its original value.
B. The insulation resistance is less than 50% of its original requirements.
C. It exhibits a permanent open or short circuit.

TEMPERATURE & IMMERSION CYCLING
These capacitors shall meet the temperature and immersion cycling test of Military Specification MIL-C-25C.

MOISTURE RESISTANCE
Shall meet the moisture resistance requirements of Military Specification MIL-C-25C.

VIBRATION
Shall withstand the Grade 3 vibration as specified in Military Specification MIL-C-25C.

CORROSION RESISTANCE
These capacitors shall meet the corrosion test of Military Specification MIL-C-25C.

specifications (continued)

LEAD PULL TEST
Shall withstand a pull of 5 lbs. applied axially to the lead for a period of one minute.

LEAD BEND TEST
The leads shall withstand without breakage, a bend at the point of egress from the capacitor first 90° in one direction, back to the original position and then 90° in the opposite direction.

SHOCK
When securely mounted by their normal mounting means, the capacitors shall withstand 3 impact shocks of 50G intensity (18 shocks total) in each direction of each of the three major axis. The time duration of each impulse shock shall be 11 ±1 milli-seconds.
There shall be no intermittent or permanent open or short circuit as a result of this test.

CAPACITANCE CHANGE WITH TEMPERATURE
The Capacitance change at 125°C shall not be greater than 5% of the measured capacitance value at +25°C.
The capacitance change at —55°C shall not be greater than 10% of the measured capacitance value at +25°C.

specifications

HIGH ALTITUDE APPLICATION:
The DC Voltage ratings listed are primarily for application at a barometric pressure between 28 and 32 inches. For high altitude application the permissible DC voltage should never exceed the rated DC voltage and shall be equal to or less than the maximum permissible operating voltage per length of glass tubing as follows:

PERMISSIBLE VOLTAGE RATING FOR HIGH ALTITUDE

Tube Length (in.)	1 3/16	1 5/16	1 3/4	2 1/4	2 3/4	3 1/2	4 1/4
Max. Volt. at 50,000 ft.	4500	5000	5300	5500	6000	7000	8000
Max. Volt. at 60,000 ft.	2400	2800	3500	4000	4300	4500	4700

RIPPLE VOLTAGE:
The ratings given are the steady-state DC voltage, or the DC voltage plus the permissible ripple voltage wherein the peak value of the permissible ripple voltage shall not exceed:

20% of the rating at 60 cps.
15% of the rating at 120 cps.
8% of the rating at 400 cps.
5% of the rating at 1000 cps.

INSULATION RESISTANCE:
The minimum insulation resistance when measured with an applied potential of 100 to 500 volts shall be as follows:
At 25°C—10,000 megohm-mfds. minimum but need not exceed 20,000 megohms.
At 85°C—100 megohm-mfds. minimum but need not exceed 1000 megohms.
At 105°C—30 megohm-mfds. minimum but need not exceed 300 megohms.

TEST VOLTAGE:
Shall withstand a DC voltage equal to 200% of the rated voltage for five seconds at a temperature of 25°C.

LIFE TEST:
Shall withstand an accelerated life test of 250 hours at 85°C with an applied voltage as follows:

Watt-Second Group	% of Rated Voltage for life test
0. to 0.49 watt-seconds	140
0.5 to 4.9 watt-seconds	130

One failure in 12 samples tested is permitted.

VOLTAGE DERATING:
When operated at high ambient temperature the capacitors shall be derated as follows:
At 85°C ..... No derating
At 105°C ..... 25% derating

POWER FACTOR:
The power factor at 25°C shall not be more than 1% when measured at or referred to a frequency of 1000 cycles per second.

LEAD PULL TEST
Shall withstand for one minute a steady 5 pound pull applied axially.

VIBRATION:
The GC246 Series capacitors (wire leads) shall be mounted and soldered to rigidly supported terminals and the length of the lead shall be approximately 5/8 of an inch when measured from the capacitor to the supporting terminal. The GC245 Series shall be mounted to brackets.
The capacitors when mounted and subjected to a simple harmonic motion having an amplitude of 0.03 inches (Total excursion 0.06 inches maximum), and the frequency being varied uniformly between 10 to 55 cycles per second and return in approximately one minute. This motion shall be applied for a period of three hours in any direction. During the last ½ hour of vibration measurement shall be made for intermittent contacts, open circuits or short circuits. One failure in six samples tested is permitted.

TEMPERATURE AND IMMERSION CYCLING:
These capacitors shall be subjected to five thermal cycles as follows:

Start at +25°C
Raise to +105°C
Return to +25°C
Reduce to —55°C
Return to +25°C

After the thermal cycle the capacitors shall be subjected to five successive immersion cycles in two tanks of saturated solutions of sodium chloride and water, one at 65°C and the other at 0°C. The period of each cycle shall consist of 60 minutes immersion in each tank. After immersion cycling, the capacitors shall be washed in tap water, surface dried with a clean cloth and dried from 4 to 6 rours at room temperature. Tre capacitor srall meet the following requirements:

Dielectric Strength ..... 125% Rated Voltage
Insulation Resistance ..... 4000 megohms-mfds. minimum but need not exceed 8000 megohms.

In addition, the capacitors shall show no harmful or extensive corrosion and at least 90% of the exposed metallic surfaces of the capacitors shall be protected by the finish.

specifications

HIGH ALTITUDE APPLICATION:
The DC Voltage ratings listed are primarily for application at a barometric pressure between 28 and 32 inches. For high altitude application the permissible DC voltage should never exceed the rated DC voltage and shall be equal to or less than the maximum permissible operating voltage per length of glass tubing as follows:

PERMISSIBLE VOLTAGE RATING FOR HIGH ALTITUDE							
Tube Length (in.)	1 3/16	1 9/16	1 3/4	2 1/4	2 3/4	3 1/2	4 1/4
Max. Volt at 50,000 Ft.	4500	5000	5300	5500	6000	7000	8000
Max. Volt at 60,000 Ft.	2400	2800	3500	4000	4300	4500	4700

RIPPLE VOLTAGE:
The ratings given are the steady-state DC voltage, or the DC voltage plus the permissible ripple voltage wherein ahe peak value of the permissible ripple voltage shall not exceed:

20% of the rating at 60 cps.
15% of the rating at 120 cps.
8% of the rating at 400 cps.
5% of the rating at 1000 cps.
1% of the rating at 10,000 cps.

INSULATION RESISTANCE:
The minimum insulation resistance when measured with an applied potential of 500 volts shall be as follows:

At + 25°C—20,000 megohm-mfds. minimum but need not exceed 100,000 megohms.
At +125°C—20 megohm-mfds. minimum but need not exceed 250 megohms.

TEST VOLTAGE:
Shall withstand a DC Voltage equal to 200% of the rated voltage for five seconds at a temperature of +25°C.

ACCELERATED LIFE TEST:
These capacitors shall withstand an accelerated life test at 250 hours at +125°C with an applied voltage as follows:

Watt-Second Group	% of Rated Voltage for Life Test
0. to 0.49 Watt-Seconds	140
0.5 to 4.9 Watt-Seconds	130

One failure in 12 samples tested is permitted.

TEMPERATURE AND IMMERSION CYCLING:
Shall meet the temperature and immersion cycling tests of military specification MIL-C-25C.

POWER FACTOR:
The power factor of the capacitors at +25°C shall not be more than 1% when measured at or referred to a frequency of 1000 cycles per second.

MOISTURE RESISTANCE:
Shall meet the moisture resistance tests of the military specification MIL-C-25C.

VIBRATION:
Shall meet the high frequency vibration requirements of MIL-C-25C.

Add following to part no. for tolerance: —K = ±10%; —J = ±5%.

specifications

XRFS462 units meet all electrical environmental requirements of MIL-C-14157.

INSULATION RESISTANCE

The minimum insulation resistance when measured in accordance with Specification MIL-C-14157 shall be as follows:

At 25°C—15,000 megohm-mfds. for capacitance values .6MFD and greater. 25,000 megohms for capacitance values below .6 MFD.

AT 125°C—20 megohm-mfds. for capacitance values .08 MFD and greater. 250 megohms for capacitance values below .08 MFD.

CAPACITANCE CHANGE FROM +25°C ±5°C.

The maximum capacitance change shall be as follows:

At — 65°C ±3°C . . . + 2%, —10%
At +125°C ±3°C . . . +10%, — 3%

DISSIPATION FACTOR

The dissipation factor when measured at room temperature shall not be more than 0.6%.

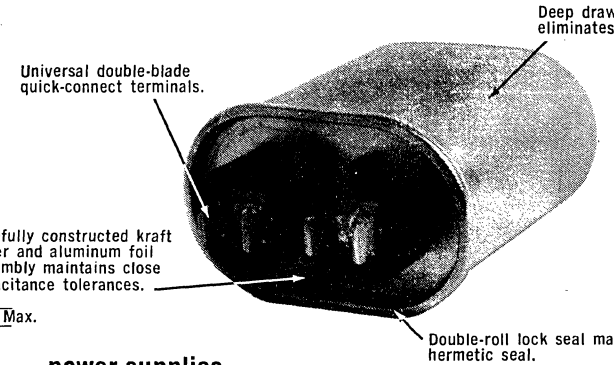
FIG. D



power supplies

Gudeman Series 9800 AC capacitors are ideal for power supply applications. They find use in typical filter networks for rectifiers or may be used for ferro-resonant transformer applications as a means of stabilizing and regulating the output voltage of constant-voltage supplies.

motor run

A typical application for the Series 9800 capacitors is improving the starting torque and efficiency of single phase motors. The capacitor provides the necessary split phase between the main and starting windings to produce sufficient starting torque.

specifications

CAPACITANCE AND TOLERANCE:
Capacitance shall be measured at a frequency of 60 Hz at 25°C ±5°C. Standard tolerance is ±10%.

POWER FACTOR:
The power factor shall not exceed .6% when measured at 60 Hz at 25°C ±5°C.

DIELECTRIC STRENGTH TESTS:
Capacitors shall withstand the following dielectric strength tests.

RATED AC VOLTAGE	TERMINAL TO TERMINAL TEST VOLTAGE DC	TERMINAL TO CASE TEST VOLTAGE DC
165	575	2800
236	700	2800
370	1200	3500
440	1600	3500
660	2400	4200

CAPACITANCE CHANGE WITH TEMPERATURE:

TEMPERATURE	CHANGE OF CAPACITANCE (MAX.)
25°C to +70°C	7.5%
25°C to 0°C	5%
25°C to −40°C	−30%

TERMINALS AVAILABLE:
Where not specified, capacitors are supplied with double blade quick-connect terminal. Other terminals available are:
Forked lug — add suffix "FL" to type number.
Solder lug with 0.12 dia. hole — add suffix "SL" to type number.

BRACKETS:
Spade or footed brackets available.

CERAMIC CAPACITORS

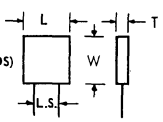
CT10, CT14, CK05, CK06 Series

A NEW NPO CERAMIC CAPACITOR featuring significantly increased volumetric efficiency

CT STYLE: (AXIAL LEADS)

CK STYLE: (RADIAL LEADS)



Dimensional Tolerances: D, L, W, and T ±.010
Lead Spacing (L.S.) ±.015

SPECIFICATIONS

TEMPERATURE RANGE:	-55°C to +125°C
TEMPERATURE COEFFICIENT:	< 30 ppm/°C from -55 to +125°C
DISSIPATION FACTOR:	0.1% at 1 VAC, 1 MHz
INSULATION RESISTANCE:	1000 megohms - microfarads but need not exceed 100,000 megohms at +25°C
FLASH TEST VOLTAGE:	3 times WVDC
LIFE TEST:	2 times WVDC at +125°C for 1000 hours
LEAD SIZE:	#22 AWG
CAPACITANCE TOLERANCE:	F, G, J, and K
MILITARY SPECIFICATIONS:	Will meet or exceed latest revision MIL-C-20
ENCAPSULATION:	Epoxy molded case

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

SEC. 1800 • COILS/ASSEMBLIES/FORMS

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. in Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

capacitors—HV

HIPOTRONICS®

CORSON ELECTRIC
A DIVISION OF HIPOTRONICS®

. . . COMBINING 4 DECADES OF EXPERIENCE WITH EXTENSIVE, MODERN FACILITIES TO BRING YOU HIGH VOLTAGE CAPACITORS AND PULSE FORMING NETWORKS FOR YOUR UNIQUE APPLICATIONS — WITHOUT ANY LOSS OF RELIABILITY.

HOWEVER UNUSUAL YOUR APPLICATIONS, CORSON ELECTRIC CAN VERY LIKELY FILL YOUR NEEDS IMMEDIATELY — OR HAS PROBABLY DESIGNED TO SIMILAR SPECIFICATIONS IN THE PAST. THE ADVANTAGE TO YOU IS PROVEN DESIGNS — WHICH MEANS LESS TIME, LESS COST, MORE RELIABILITY.

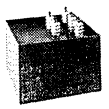
CORSON ELECTRIC ALSO HAS A STANDARD SINGLE CAN CAPABILITY UP TO 200 MFD, WITH ASSEMBLIES TO EVEN HIGHER RATINGS.

CORONA TEST

To assure high reliability and long life, all equipment is tested to Hipotronics' specification #2514 or #2515. These specifications require a corona detector with a basic sensitivity of 1 picocoulomb per centimeter.

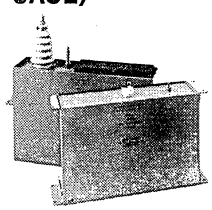
HV (HEAVY DUTY) CAPACITORS

Voltage range	0.0001 mfd @ 500 KV to 100 mfd @ 10 KV
Application	HV DC power supplies



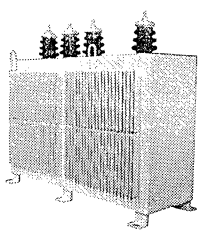
PULSE CAPACITORS (SINGLE CASE)

Voltage range	Typically to 100 KV
Frequency	1 to 25,000 pps
Application	Pulse forming networks



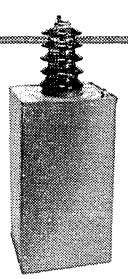
PULSE FORMING NETWORKS

Voltage range	Typically to 100 KV
Frequency	1 to 25,000 pps
Pulse width	Unlimited
HV sections	Unlimited
Impedance	0.001 to 1000 ohms
Application	Line type modulation



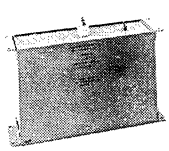
IMPULSE GENERATOR DUTY CAPACITORS

Voltage range	Typically to 100 KV
Capacitance	0.05 to 1.0 mfd
Application	Impulse generators for lightning strike simulation



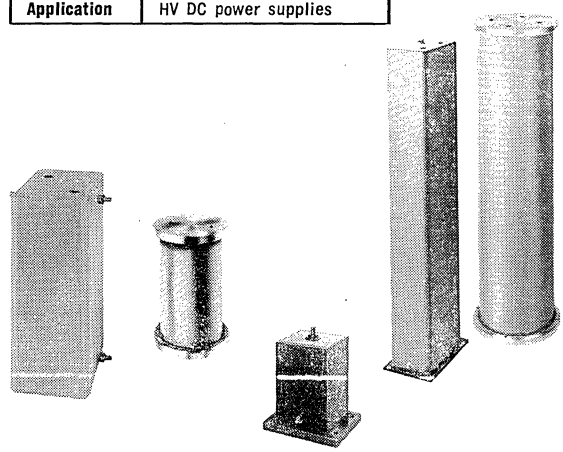
ENERGY STORAGE CAPACITORS

Voltage range	Typically to 75 KV DC
Capacitance	0.05 to 0.5 mfd
Application	Hard tube modulators



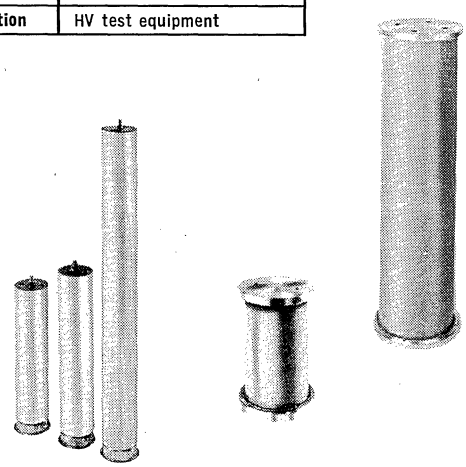
HV (DC FILTER) CAPACITORS

Voltage range	0.0075 mfd @ 500 KV to 200 mfd @ 4 KV
Application	HV DC power supplies



CORONA-FREE CAPACITORS

Voltage range	Typically to 125 KV @ 60 Hz
Capacitance	To 0.004 mfd
Application	HV test equipment



HIPOTRONICS®

HIPOTRONICS, INC.
Brewster, N. Y. 10509 / (914) 279-8091

The above are just some of the capacitors manufactured by Corson Electric. Call Don Corson for immediate assistance on these and other unique applications. See other Hipotronics' listings under Test Instruments, Power Supplies, and Transformers.

vacuum capacitors

INTRODUCTION: ITT Jennings offers the broadest available line of high voltage capacitors for radio frequency applications. Units are available in glass and ceramic envelopes with working voltage ratings of 2 kv to 40 kv, at capacitance values to 5000pfd, with current ranges of 250 amps air cooled and 750 amps rms water cooled at 16 mhz.

ADVANTAGES: The use of a vacuum dielectric allows a unit design with a number of electrical, mechanical, and environmental advantages which include the following:

1. *High Voltage*—The high dielectric strength allows maximum voltage levels of any capacitor for a given capacity rating.
2. *High Current*—Due to low losses and heavy copper construction, vacuum capacitors carry high rf currents.
3. *Compact Design*—Units are small for their power handling capabilities due to the high breakdown voltage of the vacuum dielectric.
4. *High Maximum to Minimum Capacity Ratio*—Capacity change ratios are available to 150:1, making them desirable for wide tuning ranges.
5. *Low Losses*—Extremely low losses occur because of the dielectric, the low loss glass and ceramic envelopes, and the copper and silver solder construction. Therefore, units are able to handle large currents at high rf frequencies that would destroy capacitors with other dielectrics.
6. *Self Healing*—The vacuum dielectric permits moderate overloads that would damage other materials.
7. *High Altitude Operation*—Vacuum capacitors are free from internal degradation from extreme environmental conditions.

* G = Glass; C = Ceramic

[1] RF working voltage is the maximum RF voltage that can be applied to the capacitor over the 2-32 MHz frequency range, provided the RF current rating is not exceeded.

[2] RF current rating is dependent upon capacity and frequency. Write for complete applications data.

APPLICATIONS: Because of the high power handling capability of vacuum capacitors, their application is broad in the field of communications where space is critical or where high voltage must be safely handled with maximum reliability.

Specific uses for the Jennings capacitor would include tunable or fixed elements in transmitter tank circuits, in impedance matching networks for antenna couplers, in high power filters for multi-coupling and harmonic reduction, and in various voltage dividing networks.

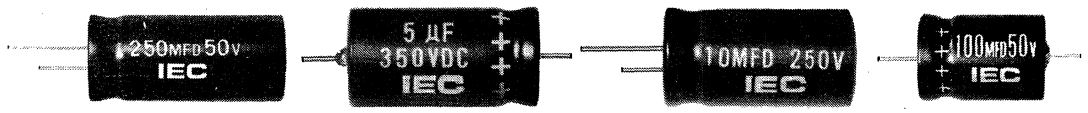
IEC CAPACITORS

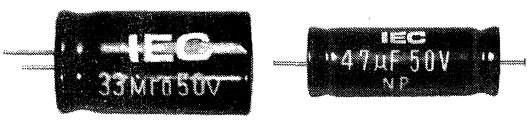
INTERNATIONAL ELECTRONICS CORPORATION

ELECTROLYTIC CAPACITORS



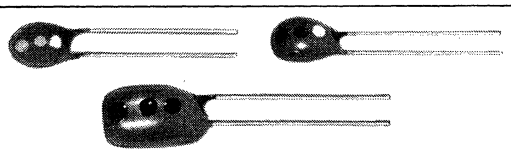
Miniature Aluminum Electrolytic — Axial and radial lead styles with welded construction, in PVC insulated aluminum cans. Unique spinning and crimping method assures a tight fitting end seal that provides proper venting while effectively resisting humidity and cleaning agents.

Capacitance Range	.47 MFD—2000 MFD
Operating Voltage	6.3 Volts D.C.—450 Volts D.C.
Temperature	—40°C to +85°C



Non-Polarized Electrolytic — Designed for use in circuits seeing polarity reversals, such as speaker crossover networks, and bypass applications. A unique method of sealing permits the capacitor leads to be connected directly to the electrolytic element.

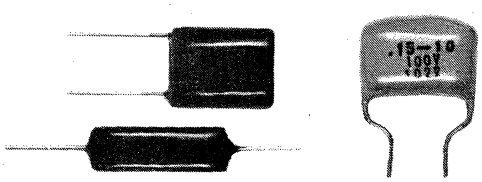
Capacitor Range	1.0 MFD—100 MFD
Operating Voltage	25, 35, 50 Volts D.C.
Temperature	—30°C to +85°C



Dipped Solid Tantalum — Epoxy-dipped miniature capacitors with radial leads for printed circuit applications.

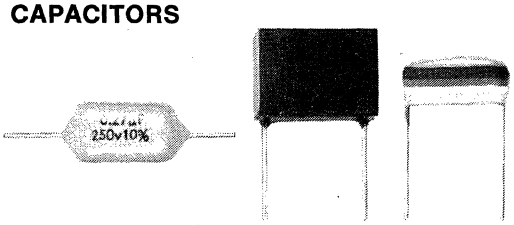
Capacitance Range	.1 MFD—100 MFD
Operating Voltage	3 Volts D.C.—35 Volts D.C.
Temperature	—55°C to +85°C

POLYESTER FILM CAPACITORS



Subminiature Polyester Film — Subminiature package with radial leads for easy insertion in printed circuit boards. Axial and radial lead versions are triple epoxy dipped to assure a high insulation resistance and humidity protection.

Capacitance Range	.001 MFD—.5 MFD
Operating Voltage	100, 200, 400, 600 Volts D.C.
Temperature	—40°C to +85°C, with no derating



Metalized Polyester Film — Non-inductively wound, extended foil construction. Self-healing characteristics assure extended life in all applications.

Capacitance Range	.0047 MFD—10 MFD
Operating Voltage	63 Volts D.C.— 600 Volts D.C.
Temperature	—40°C to +125°C

Over 4,000 types and sizes available from stock.

Our manufacturing and distribution control system guarantees that we never run short. So IEC or our distributors can deliver the capacitors you want, when you want them.

And we know that quality is as crucial as delivery. That's why our capacitors are built for accuracy and have to pass the industry's most demanding life tests before shipment. These are some of the reasons leading manufacturers of entertainment and industrial equipment everywhere depend on IEC.

If you use electrolytic or film capacitors, trust IEC to deliver quality at a competitive price. For complete details, write or call International Electronics Corporation, Melville, New York 11749, (516) 694-7700.

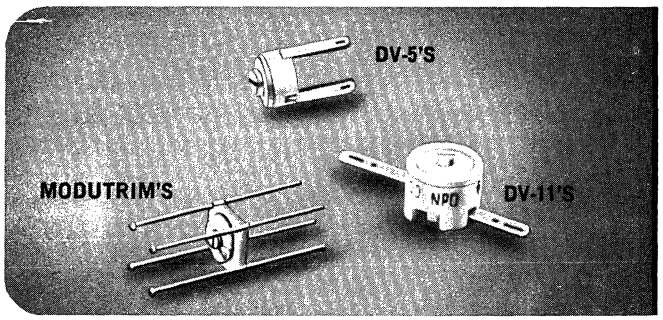
FIXED AND VARIABLE CAPACITORS



CERAMIC VARIABLES offer a wide choice of mounting configurations and capacitance values for use in the low cost commercial thru high grade Military markets. Meet applicable Mil-C-81A requirements.

Modutrims—especially designed for micromodule and hybrid circuit applications. MT's are available in 5 basic mounting configurations. Capacitance range 5 to 60 pf. max.

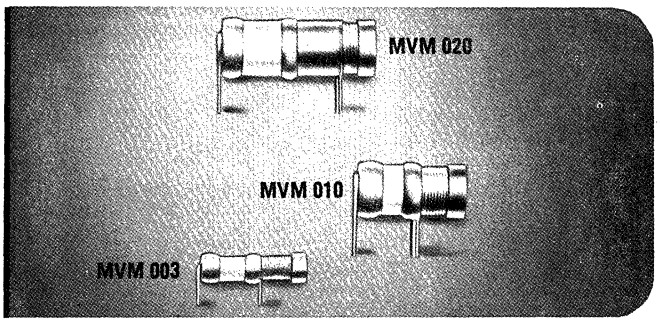
DV-5's—5 mm's in diameter, these microminiature units occupy less than .050 square inches of printed circuit board space. Capacitance range 9 to 30 pf. max.

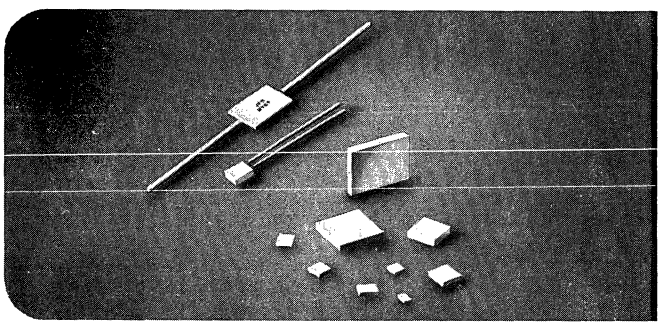
DV-11's—9.5 mm's in diameter, these low cost capacitors were designed for TV, AM, FM receivers, test equipment, communication equipment, low power transmitters, filters and delay line applications. 4 mounting configurations are available. Capacitance range 8 to 60 pf. max.

Write for Ceramic Variable catalogs.

AIR VARIABLES—designed for high frequency requirements. JFD air variables are rugged, small in size and offer many unique advantages over competitive units. These are: a metal rotor that provides more constant torque during and beyond torque life (600 turns), increased electrical contact assuring lower noise levels and a unique internal guiding element that keeps the rotor centered under the severest environmental conditions. Conforms to applicable portions of Mil-C-14409. Five series comprise this line.

MVM 003—Microminiature in size. Capacitance range is 0.35 pf to 3.5 pf.
MVM 006—Microminiature in size. Capacitance range 0.40—6.0 pf (not shown).
MVM 010—Capacitance range 0.8—10 pf.
MVM 020—Capacitance range 1.0—20 pf.
VAM 010—Capacitance range 0.8—10 pf (not shown).
All MVM's are completely interchangeable with competitive units. Write for Air Variable Catalogs.





UNICERAM HI Q & K CHIPS—Monolithic Hi Q chips offer the ultimate in stability and small size for high frequency applications. With typical Q values of 10,000 and more; these units offer a high ratio of capacity per unit volume. Available in 5 case sizes from .109" to .406" and in capacitance ranges of .5 pf to 3000 pf. Meet or exceed portions of MIL-C-11272B.

Uniceram Hi Q capacitors are also available in leaded configurations. 5 case sizes are included with capacitance values of 0.5 pf to 3000 pf.

Hi K chips are ideal for high density packaging in cordwood, hybrid and thick film circuits. Manufactured in 18 case sizes. Capacitance range 5 pf to 1.5 mfd. Meet or exceed portions of MIL-C-11015 and MIL-C-39014.

Hi Q and K chips are available with silver leads and glass encapsulation for difficult applications.

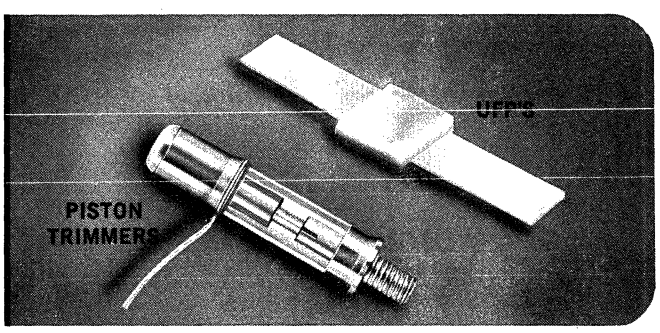
Write for Uniceram catalogs.

HI RF POWER CAPACITORS—FIXED AND VARIABLE were designed for communication applications.

Piston Trimmers—units feature a unique fused quartz cylinder that yields an extremely low dissipation factor and temperature coefficient. Piston Trimmers operate over a frequency range of from 1 to 30 MHz. Two models comprise this series: VCJ1616M—operates on an RF voltage level of 3100 V peak at +25°C derated to 2500 V peak at +200°C (superimposed on 2500 V DC). Capacitance range 0.5 to 5 pf. VCJ1616E—operates on an RF voltage level of 4,000 V peak at +25°C derated to 3500 V peak at +200°C (superimposed on 2,500 V DC). Capacitance range: 0.9 to 5 pf.—These units can be used at much higher frequencies with proper RF voltage derating.

UFP-Fixed Ceramics—UFP's are the smallest RF power capacitors made. Offered in three standard sizes, these highly stable and reliable fixed ceramics have been used in frequencies as high as 200 MHz. Capacitance values from 10 to 3,000 pf (±.5 for low capacitance values; ±5% and ±10% for higher values).

Write for Hi RF Voltage Piston Trimmer and Uniceram High RF Current Fixed Ceramic Catalogs.



JFD OFFERS THE INDUSTRIES LARGEST SELECTION OF GLASS AND QUARTZ PISTON TRIMMER CAPACITORS. OVER 3000 MODELS ARE AVAILABLE.

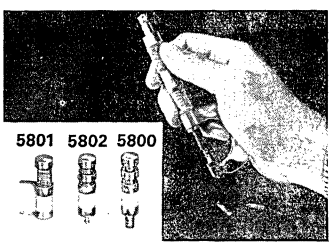
ROTARY CERAMIC DISC TRIMMER CAPACITORS

The 9300 series miniature and microminiature rotary ceramic disc trimmer capacitors provide the circuit engineer features previously not available in units of such small size. The precision designed rotor plate provides long life and environmental stability. The series is mechanically designed to insure high resistance to shock and vibration. Their low cost in quantity makes them ideal for a wide variety of applications.

Capacitance Range: 1.7 pF to 70.0 pF
Working Voltage: 250 VDC (test voltage 500 VDC)
Q @ 10 MHz: > 200 to > 500
Temperature Coefficient: NPO ±250 ppm/°C to −1400 ±800 ppm/°C
Temperature Range: − 55°C to +85°C
Insulation Resistance: 10^4 Megohms @ 250 VDC @ Maximum Capacity

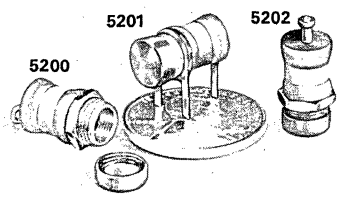
MICROWAVE AIR VARIABLE CAPACITORS



These new Ultra High Q Trimmers incorporate a new patented contact mechanism which affords Q's previously unavailable in trimmer capacitors, excellent tuning stability with very low dynamic noise, approximately zero temperature coefficient and extended frequency range into the C-band region. These capacitors are ideally suited for VHF, UHF and microwave applications.

Capacitance Range: 0.35 pF to 3.5 pF
Working Voltage: 250 VDC (test voltage 500 VDC)
Q @ 100 MHz: > 10,000; @ 250 mc: > 2000
Insulation Resistance: > 10^6 megohms
Temperature Range: −55°C to +125°C
Temperature Coefficient: 0 ±15 ppm/°C

MIL APPROVED HIGH Q VARIABLE AIR CAPACITORS

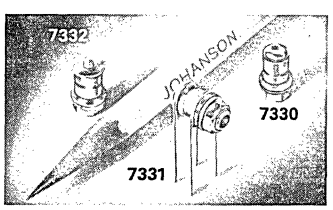


Models 5200 & 5201 are included in QPL List 14409 and bear PC25J100 & PC26J100 part number designations.

These capacitors feature Johanson's patented one piece contact-rotor mechanism and afford Q's previously unavailable in trimmers of such a miniature size. They are ruggedly designed for complete protection against all environmental conditions yet provide critical tuning stability.

Capacitance Range: 0.8 to 10.0 pF
Working Voltage: 250 VDC (test voltage 500 VDC)
Breakdown: > 500 VDC
Insulation Resistance: > 10^6 megohms @ 500 VDC
Q @ 100 MHz: > 5000
Temperature Coefficient: 0 ±15 ppm/°C
Shock: >275 g (6.0 millisec.)

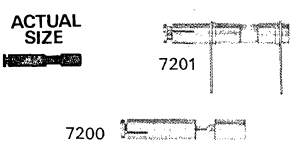
GLASS TRIMMER CAPACITORS



The Johanson 7300 series of variable capacitors is ideally suited for both commercial and military applications. The unique solid metal band design assures electrical and mechanical reliability in excess of conventional trimmers. The three mounting configurations available in this series affords the circuit designer wide latitude in mechanical layout.

Capacitance Range: 1.0 pF to 10.0 pF
Working Voltage: 500 VDC (test voltage 1000 VDC)
Q @ 100 MHz: > 900
Insulation Resistance: > 10^6 megohms
TemperatureRange: −55°C to +125°C
Temperature Coefficient: 0 ±50 ppm/°C

MICROCIRCUIT TRIMMER CAPACITORS



The 7200 series Microcircuit Trimmer is the *smallest* device of this type available. It is ideally suited for hybrid circuits, UHF oscillators, striplines, balancing of semiconductors and microwave components. They eliminate the need for abrasive trimming, trimming by interchange of fixed capacitors or trimming by inductors as well as providing the ability to "tweak" a circuit after encapsulation.

Capacitance Range: 0.1 pF to 2.0 pF
Working Voltage: 500 VDC, Test 1000 VDC
Q @ 100 MHz: > 3000
Temperature Coefficient: 50 ±50 ppm/°C
Insulation Resistance: 10^4 megohms at 200 VDC

Variable capacitors are our business. We make all types: air, quartz and glass. And we can offer you a choice of nearly 100 models directly from stock. Including:

- Microwave Capacitors
- Rotary Ceramic Capacitors
- Microcircuit Trimmer Capacitors
- High Q Variable Air Capacitors
- High RF Voltage Quartz Trimmer Capacitors
- Microwave Power Capacitors
- Tuning Capacitors
- Differential Capacitors

ELECTRONIC ACCURACY THROUGH MECHANICAL PRECISION

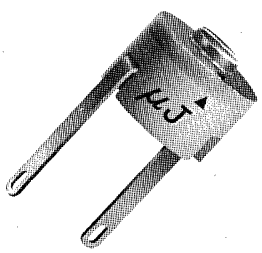
VARIABLE CAPACITORS

E. F. JOHNSON COMPANY®

Whatever the choice . . . sub-miniature capacitors for printed circuit use or large heavy duty types . . . design and development engineers specify Johnson variable capacitors. More than eleven basic capacitor series available in a wide selection of single section, dual section, butterfly and differential types. Stock capacitors that meet many military and commercial applications are available in a wide range of plate spacings, capacity per section, breakdown ratings and finishes. Specials are available in production quantities.

For price and ordering information call the nearest E. F. Johnson sales representative or, the E. F. Johnson factory listed in the yellow pages of this volume.

Free Capacitor Catalog 16-page catalog gives specific information on complete capacitor line. Send request on your letterhead to E. F. Johnson Co., 1923 10th Avenue S.W., Waseca, Minn. 56093.



CERAMIC DISC TRIMMERS

Sub-miniature ceramic disc trimmer exhibits extreme environmental stability and long life due to the encapsulation of the rotor plate in titinate. Diameter: 0.218". Designed to meet or exceed performance criteria of MIL-C-81B. Operating range is −55° to 125°C. NPO temperature characteristics, Type A. Working voltage 100 VDC up to 85°C, 50 VDC up to 125°C. Peak withstanding voltage is greater than twice the working voltage.

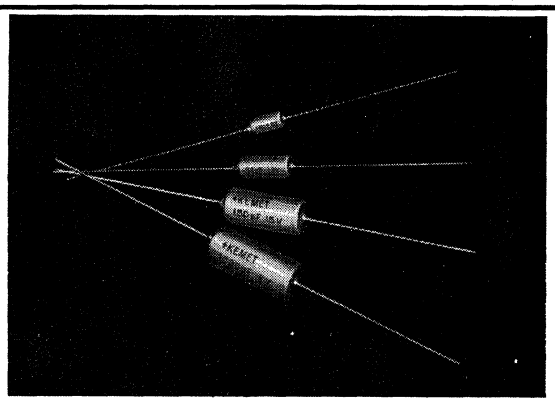
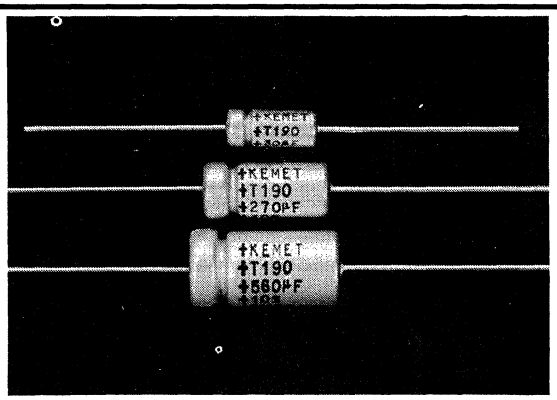
KEMET® TANTALUM CAPACITORS

- **Complete Line for all Industrial, Military, and Commercial Applications**
- **Available to Mil-C-39003 (Styles CSR23, CSR13 & CSR09)**
- **National Sales & Distribution Network**



KEMET J-Series



KEMET Wet Tantalum Capacitors

Series	Description & Features	Capacitance & Voltage Range	Size Range (Inches)	Leads	Request Catalog
C	Molded epoxy, polar, self insulating. Ideal for commercial and industrial applications which do not require performance standards of hermetically sealed capacitors. Precision dimensions suitable for automatic insertion equipment. Bullet shaped for positive polarity identification.	.1 - 220μF 6 - 50 VDC	4-case sizes .138 x .390 to .365 x .875	Axial	F-2622B
D	Extended range molded sub-miniature sizes featuring extremely high capacitance-to-volume ratio. Dimensions and tight lead wire-to-body concentricity permit automatic insertion by same equipment used for diodes and resistors. Suitable for decoupling, blocking, by-passing and filtering applications.	.0047 - 68 μF 6 - 50 VDC	3-case sizes .100 x .290 to .190 x .530	Axial	F-2632A
E	Dip coated plastic encapsulation providing the widely recognized shelf and operational life performance characteristics inherent in solid tantalum capacitors at prices competitive with conventional electrolytics. The dipped plastic case provides a tough barrier coating against moisture and shock and maintains precision lead spacing.	.1 - 330 μF 6 - 50 VDC	4-case sizes .175 x .350 to .400 x .750	Radial	F-2638C
J	Popular military hermetic sealed A, B, C & D case solid tantalum capacitors conforming to all requirements of Mil-C-39003. Designed for miniaturized circuitry, they exhibit excellent stability, long life, extremely low DC leakage and D.F. over a wide temperature and frequency range.	.0047 - 330 μF 6 - 125 VDC	4-case sizes .125 x .250 to .341 x .750	Axial	F-1851D
MICRON	A complete line of microminiature capacitors designed for use in high density military, industrial and consumer circuits. Combines space saving advantages of .003 Mil MYLAR cases and KEMET's reliabiltiy engineering to achieve outstanding performance. Available in a wide variety of case styles, sizes and lead configurations.	.0047 - 220 μF 2 - 100 VDC	29-case sizes .125 x .070 x .040 to .475 x .374 x .150	Axial & Radial	F-2710B
WET TANTALUM	KEMET Wets are offered in three case sizes for use in circuits requiring the advantages of tantalum oxide dielectric plus maximum capacitance per unit volume. Product line includes KEMET T190 Series, MIL-C-3965C CL64 and CL65, MIL-C-39006B CLR65, extended range, and gel electrolyte capacitors.	1.7 - 560 μF 6 - 125 VDC	3-case sizes .188 x .453 .281 x .641 .375 x .766	Axial	F-2732A

For a complete listing of KEMET capacitors, request Form F-2644 — KEMET Condensed Catalog.

KEMET® MONOLITHIC CERAMIC CAPACITORS

- **Ideal for Bypass, Filtering & Coupling in Low Voltage and Transistorized Circuits**
- **Designed, Manufactured & Tested to Mil-C-11015D & Mil-C-39014B**
- **Capacitance Range from 10 pf to 3.3 μF**
- **Temperature Range −55° to +125°C**

Kilovac® CORPORATION

HIGH VACUUM VARIABLE CAPACITORS

KILOVAC, leading manufacturer of high voltage vacuum relays, PENTA power tubes and DOW-KEY coaxial relays, now offers a line of high voltage vacuum variable capacitors for the most demanding applications. The use of a high vacuum as dielectric in variable capacitors results in a component with unique characteristics, particularly suited to applications in high power radio frequency circuits. The maximum capacitance that can be provided in a single unit is normally a few thousand picofarads. The high dielectric strength and freedom from environmental factors, such as dust and humidity, give the vacuum capacitor a far higher voltage capability than air dielectric capacitors of similar size. Vacuum capacitors have frequently been used to replace existing air dielectric capacitors many times their size, with the additional benefit of greater reliability.

"Designed for Application"® CAPACITORS

No. 25000 miniature, precision, high Q variable air dielectric capacitors with high reliability are machined from solid bars of extruded brass. Knob or screw-driver adjust from the front. Single hole mount, mount with two screws, or with tabs. 0.010" air gap. 350V. 21 plate **25035** is 4.0 to 35.8pf. 0.750" x 0.562" x 23/32"L.

No. 20000 Ceramic end plate 1-3/16" x 1-5/16". Silver plated plates. 0.015" air gap — 600V. peak or 0.045" air gap — 1400V. peak.

20005 2.0-4.5pf. 600V. ¾"L—**20100** 5.2- 111pf. 600V. 1½"L

20904 2.5-3.8pf. 1400V. ⅞"L—**20935** 6.7-39.5pf. 1400V. 2⅛"L

No. 22000 Ceramic end plate 1-1/16" x 1-7/16". Single bearing or double bearing. Air gap 0.020"—800V. peak or 0.060"—2000V. peak.

22006 2.8- 7.5pf. 800V. 1⅛"L—**22200MK** 11-207pf. 800V. 2-9/16"

22910 4.1-12.5pf. 2000V. 1¼"L—**22950MK** 8.5-57.0pf. 2000V. 3"L

No. 23000 Ceramic end plate 1-7/16" x 1½". Single bearing or double bearing. Single or dual section. Balanced or inline rotor. Air gap 0.020"-800V. peak or 0.060"—2000V. peak.

23907MKY 3.5-7pf. 2000V. 1-9/16"L—**23140MK** 10-146.5pf. 800V. 2⅛"L

No. 26000 Ceramic end plate 15/16" x 1-7/32". Silver plated plates. 0.015" air gap — 600V. peak or 0.045" air gap — 1400V. peak.

26010 2.9-11pf. 600V. ⅞"L—**26100** 5.5-109pf. 600V. 1-9/16"L

26910 3.3-11pf. 1400V. 1⅛"L—**26935** 6.8-39.5pf. 1400V. 2-3/16"L

No. 28000 Straight line capacity or **No. 29000** straight line frequency. Double ceramic end plates 1-9/16" x 1-11/16". Double bearing. Single or double section. Balanced or inline rotor. Air gap 0.022"-850V. peak, 0.040"-1350V. peak or 0.066"—2250V. peak.

28227MKW 16-227pf. 1350V. 4-1/16"L—**29025KM** 3.9-23.3pf. 850V. 1-9/16L

No. 19000 Ceramic insulators. Cross section 1-9/16" x 1-11/16". Double bearing. Air gap 0.022"-850V. peak, 0.040" — 1350 V. peak or 0.066" — 2250V. peak. Single section. Tapped mounting brackets.

19335 14.7-339pf. 850 V. 2⅜"L—**19950** 11.6-60pf. 2250V. 2¼"L

No. 15000 NEUTRALIZING CAPACITORS. Parallel discs or concentric cylinders. **15011** Disc 3.5pf. at 0.4" gap to 18pf. at 0.04" gap.

15005 Cylindrical Capacitor — 3.5pf. to 16.2pf. — 4000V. peak.

15006 Cylindrical Capacitor — 3.2pf. to 9.7pf. — 6000V. peak.

No. 11000 TRANSMITTING CAPACITORS. 16/1 or 48/1 ratio center gear drive. Ceramic insulation. Air gap 0.077"-3000V. peak or 0.176"-6000V. peak. Polished aluminum plates 0.040" thick. Dual section.

11035 5.3-34pf. 3000V. 5-7/16"L—**11090** 10-93pf. 3000V. 7⅜"L

No. 12000 TRANSMITTING CAPACITORS. Rigid, heavy channeled aluminum end plates. Ceramic insulation. Single or dual section. Air gap 0.077"-3000V. peak or 0.176"-6000V. peak. Polished aluminum plates 0.040" thick. Unpolished plates available for 3000V. gap.

12536 9.7-28pf. 6000V. 4"L—**12515** 16-150pf. 3000V. 5¼"L

No. 04000 BALANCED TRANSMITTING CAPACITORS. 1/1 right angle center gear drive. Adjustable drive angle for sloping panel. Sturdy cast aluminum frame. Ceramic insulation. Air gap 0.077"-3000V. peak, 0.171"-6000V. peak or 0.265"-9000V. peak. Polished plates.

No. 16000 TRANSMITTING CAPACITORS. Ceramic insulation. Air gap 0.077"-3000V. peak, 0.171"-6000V. peak or 0.265"-9000V. peak. Polished aluminum plates 0.050" thick. Single or dual section.

16550 13-52pf. 6000V. 3⅜"L—**16530** 45-297pf. 6000V. 12½"L

16559 11-65pf. 9000V. 6¼"L—**16512** 40-128pf. 9000V. 11½"L

GENERAL NOTES

Capacitance Tolerance: Standard tolerance is ±5%. All types available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 cps at 25°C for values up to and including 5.0 mfd. Values larger than 5.0 mfd shall be measured at 60 cps and 25°C.

Dissipation Factor: Less than 0.60% when measured at 1000 cps and 25°C for values up to and including 5.0 mfd and 60 cps for values larger than 5.0 mfd 60 cps and 25°C.

Insulation Resistance: Greater than 100,000 megohm-microfarads after a 2-minute electrification at rated voltage and 25°C, but the I.R. need not exceed 200,000 megohms.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C, thru a current limiting resistance of 100 ohms per volt.

Temperature Range: May be operated at rated voltage from −55°C to +85°C and +125°C with 50% derating.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. Capacitance shall be measured at 1000 Hz. and 25°C.

Dissipation Factor: Less than 0.2% when measured at 1000 Hz. and 25°C.

Insulation Resistance: Greater than 50,000 megohm-mfds after a 2-minute electrification period at rated voltage and 25°C. I.R. need not exceed 100,000 megohms. Higher I.R. is available upon special request.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C through current limiting resistance of 100 ohms per volt, when applied terminal to terminal and terminal to case.

Life Test: 500 hours at 125% of rated voltage and 150°C.

Humidity Resistance: Meet or exceed requirements of MIL-C-19978B for H8, H8S, H8G, H8GS; MIL-C-27287 for Type 8.

Temperature Range: May be operated at rated voltage from −55°C to +150°C with no derating.

Construction: Extended foil winding, polysulfone dielectric.

GENERAL NOTES

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. and 25°C.
Dissipation Factor: Less than 0.1% when measured at 1000 Hz. and 25°C.
Insulation Resistance: 500,000 megohm-microfarads after a 2 minute electrification period at rated voltage and 25°C. The I.R. need not exceed 500,000 megohms.
Dielectric Strength: 200% of rated voltage for 60 seconds at 25°C thru a current limiting resistance of 100 ohms per volt.
Life Test: 250 hours at 140% of rated voltage and 85°C.
Temperature Range: May be operated at rated voltage from −55°C to +85°C.
Temperature Coefficient: −120 parts per million per °C, ±20 PPM.
Dielectric Absorption: Will not exceed 0.1% when measured at 25°C.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz at 25°C.
Dissipation Factor: Less than .05% when measured as above.
Temperature Coefficient: H44A ≦ ±20 PPM/°C
H44B ≦ ±40 PPM/°C
Insulation Resistance: 1,000,000 megohm-microfarads following a 2 minute electrification at rated voltage and 25°C. I.R. need not exceed 1,000,000 megohms. 250,000 meg. mfd. at 85°C.
Dielectric Strength: Twice rated voltage for 60 seconds at 25°C through a current limiting resistance of 100 ohms per volt.
Temperature Range: May be operated at rated voltage from −55°C to +85°C.
Life Test: 250 hours at 140% of rated voltage and 85°C.
Humidity Resistance: Meet or exceed requirements of MIL-C-27287.
Construction: Extended foil winding, polystyrene dielectric, hermetically sealed case.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±4%, ±3%, ±2%, and ±1%. Capacitance shall be measured at 1000 Hz. and 25°C.
Dissipation Factor: Less than 0.20% when measured at 1000 Hz. and 25°C.
Insulation Resistance: Greater than 200,000 megohm-mfds following a 2 minute electrification period at rated voltage or 500 VDC; whichever is less; and 25°C. I.R. need not exceed 500,000 megohms.
Dielectric Strength: Twice rated voltage for 60 seconds at 25°C, thru current limiting resistance of 100 ohms per volt.
Dielectric Absorption: Shall not exceed 0.5% (Ref. MIL-C-19978B).
Life Test: 250 hours at 140% of rated voltage and +125°C.
Temperature Range: May be operated at rated voltage from −55°C to +125°C.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. Capacitance shall be measured at 1000 Hz. and 25°C for values up to and including 5.0 mfd. Larger values shall be measured at 60 Hz. and 25°C.
Dissipation Factor: Less than 1.0% when measured as specified above.
Dielectric Strength: Twice rated voltage for 60 seconds at 25°C; thru a current limiting resistance of 100 ohms per volt.
Insulation Resistance: 30,000 megohm-microfarads following a 2 minute electrification period at rated voltage and 25°C. I.R. need not exceed 30,000 megohms.
Life Test: 500 hours at 140% of rated voltage and 85°C.
Humidity Resistance: Meets or exceeds requirement of MIL-202C method 103A.
Temperature Range: May be operated at rated voltage from −55°C to +85°C and to +125°C with 50% derating.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. Capacitance shall be measured at 1000 Hz. and 25°C for values up to and including 5.0 mfd. Larger values to be measured at 60 Hz.
Dissipation Factor: Less than 0.50% when measured as specified above.
Insulation Resistance: Greater than 75,000 megohm-microfarads after a two-minute electrification period at rated voltage and 25°C. I.R. need not exceed 150,000 megohms.
Dielectric Strength: 200% of rated voltage for 60 seconds at 25°C thru a current limiting resistance of 100 ohms per volt.
Temperature Range: May be operated at rated voltage from −55°C to +125°C.
Life Test: 250 hours at 140% of rated voltage and 85°C.

Monolithic Dielectrics Inc.

MDI CERAMIC CHIP CAPACITORS TYPE K1200 TYPE NPO

INTRODUCTION

MDI offers a truly solid-state capacitor featuring monolithic construction which is inherently impervious to moisture and contamination — yet without space and cost consuming exterior encapsulation.

A new breakthrough in the state-of-the-art enables MDI to provide capacitance ranges previously unattainable in comparable sizes and characteristics.

GENERAL SPECIFICATIONS

MIL Specifications: Meets applicable portions MIL-C-11015 and MIL-C-39014
Working Voltage: 25/50/100/200 VDC
Insulation Resistance: 1000 megohm-mfd or 100,000 megohms @ 25°C and VDCW (÷ 10 for 125°C)
Flash Test: 3 X VDCW below .1 mfd, 2.5 X VDCW .1 mfd and above (5 sec @ 25°C, 50 ma max.)

Life Test: 2 X VDCW @ 125°C, 1000 hrs
Electrodes: .015 min silver band-width standard except R11 band .005 min.; Gold, Palladium-Silver, Palladium-Gold and Platinum-Gold also available
Inspection Sequence:
1. Capacitance
2. Dissipation Factor
3. Insulation Resistance
4. Flash Test

K1200 SERIES

Capacitance Range: 10 pf to 2.5 mfd, tested @ 1 kHz, 1 VRMS, 25°C
Tolerance: ±20% std., ±10%, ±5% and GMV
Dissipation Factor: Less than 2% @ 1 kHz
Temperature Coefficient: ±15% max., −55°C to 125°C
Voltage-Temperature Coefficient: +15%, −25%, −55°C to 125°C

NPO SERIES

Capacitance Range: 1 pf to .1 mfd, tested @ 1 kHz, 1 VRMS, 25°C
Tolerance: ±10% std., ±5%, ±2%, ±1%, ±.5 pf and ±.25 pf*
Dissipation Factor: Less than 0.1% @ 1 kHz
Temperature Coefficient: Less than ±30 ppm/°C., −55°C to 125°C
Voltage-Temperature Coefficient: 0%, ±30 ppm/°C, −55°C to 125°C
*Tolerances of ±.5 pf or ±.25 pf available for values between 1 pf and 10 pf in size R16 or smaller only.

MONOLITHIC CERAMIC CAPACITOR CHIP KITS

CHIP KIT NO. 1

300 monolithic ceramic K1200 capacitor chips for hybrid circuits. There are 10 chips of each standard RETMA values from 1.2 pf to 330 pf in ±10% tolerances at 50 VDCW in Kit No. 1. Complete kit $49.50.

CHIP KIT NO. 2

Kit No. 2 has 10 chips each of all standard RETMA values from 390 pf to .1 MFD in ±10% tolerances at 50 VDCW. Complete kit $49.50.

CHIP KIT NPO

300 monolithic ceramic NPO capacitor chips for hybrid circuits. Kit includes 10 chips of each standard RETMA values from 3.9 pf to 1000 pf in ±10% tolerances at 50 VDCW. Values below 10 pf are generally supplied in a chip size of .050" x .040" x .025". Complete NPO kit $99.50.

HOW TO ORDER

100 — **WORKING VOLTAGE**
25 = 25 VDC
50 = 50 VDC
100 = 100 VDC
200 = 200 VDC

R16 — **SIZE DESIGNATION**

W or N — **TEMPERATURE STABILITY**
W = ±15% max
N = ±30 ppm max/°C
−55°C to 125°C

103 — **CAPACITANCE IN PICOFARADS**
The first two figures are significant, last digit specifies number of zeros to follow (103=10,000 pf)

M — **TOLERANCE**
M = ±20%
K = ±10%
J = ±5%
G = ±2%
F = ±1%
D = ±.5 pf
C = ±.25 pf

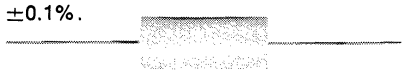
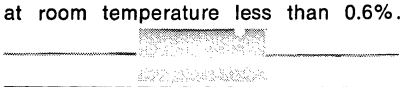
Capacitors

Film and Paper

TYPE 231 (Polystyrene Film — Extended Foil) — Designed for applications requiring high insulation resistance, low dissipation factor and minimal dielectric absorption. Hermetically sealed. Available in standard tolerance of ±1% to ±20%. Can be provided to special close tolerance of ±0.1%.



TYPE 107 (Mylar and Foil) — Designed for applications requiring a flat capacitance change with temperature from +15 to +65°C. Provides exceptional electrical properties in the range of −55° to +125°C. Dissipation factor at room temperature less than 0.6%.



TYPE 223 & 230 (Metalized Mylar and Metalized Paper/Mylar) — Self-healing property makes this hermetic unit suitable for the most stringent applications. Special capacitance tolerance of ±1% can be provided.

TYPE 207 (Paper/Polyester Film) — Hermetically Sealed — Temperature range: −65°C to +125°C. Available in 8 style variations. Made to meet Mil-C-19978 character K.

TYPE 216 (Polyester Film) Hermetically Sealed — Temperature range: −65°C to +125°C. Available in 8 style variations. Made to meet Mil-C-19978.

TYPE CPO SERIES (Paper & Foil) Approved to Mil-C-25. Hermetically Sealed. CP04, CP05, CP08, CP09, CP25 through CP29, CP40, CP41, CP53, CP54, CP55, CP63, CP65, CP67, CP69, CP70, CP91. Wide range of capacitances, voltages and circuits.

Tantalum

STYLE MCS (Mil Type CS12 and CS13) — Miniature solid electrolyte hermetically sealed capacitor. Available in non-polar construction. Capacitance range: .0047 to 330 μf.

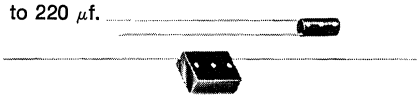
STYLE CSR 13 — Established reliability capacitor, manufactured to exacting military standards. Solid electrolyte. Meets or exceeds the requirements of MIL-C-39003A. Capacitance range: .0047 to 330 μf. Failure rate level L, M, P & R.

STYLE TAK and TAK-H — (Mil Type CL64 and CL65) A sintered anode gelled electrolyte miniature capacitor, operates under extreme environmental conditions and wide temperature ranges. Capacitance range: 1.7 to 560 μf.

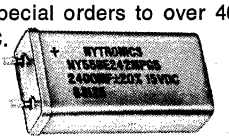
STYLE MTAK — Subminiature version of TAK series. Offers all the advantages of TAK in a smaller configuration. Capacitance range: 3.3 to 330 μf.

STYLE ACS — Solid electrolyte in metal can with epoxy end fill. Available in both standard MCS and subminiature cans. Axial leads. Capacitance range: .0047 to 330 μf.

STYLE CMS and RMS — Subminiature solid electrolyte tantalums produced to same rigid specs and quality as our MIL types. Cylindrical (CMS) and rectangular (RMS) configurations—both epoxy-encapsulated. Rugged mylar cases. Axial or radial leads. From .001 to 220 μf.



STYLE NY55 (MIL-Style CL55) — New metal-cased, wet sintered slug tantalum capacitors, meeting MIL-C-3965 requirements. High capacitance, 70 to 2400 μf; special orders to over 4000 μf. 10-150VDC.

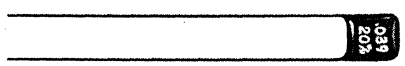


Ceramic

TYPE EK — An epoxy molded monolithic ceramic capacitor designed to meet Mil-C-11015/20B. Capacitance range from 10 pf to 3.3 μf.

DECI-CAP — A subminiature monolithic capacitor with an epoxy molded envelope 0.100″ diameter by 0.250″ long. Designed to meet Mil-C-11015. Capacitance range 4.7 pf to 27,000 pf ±10%.

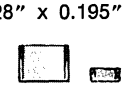
HY-CAP — Offers high capacitance range .01 mfd to 2.5 mfd ±20%. Voltage 100 WVDC, no derating to 125°C. Designed to meet Mil-C-11015.



Ultra High Stability

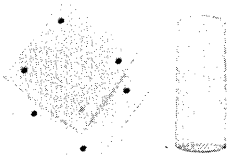
NYT-CAP — A high stability monolithic ceramic with a range of 4.7 pf to 4700 pf.: 4.7 pf to 220 pf case size 0.1″ dia. x 0.250″ long. 270 pf to 4700 pf, ±10%: 0.350″ x 0.250″ x 0.1″.

NYT-CHIP — A high stability monolithic ceramic chip capacitor. Chip dimensions are as follows: 4.7 pf to 220 pf: 0.170″ x 0.065″ x 0.070″. 270 pf to 4700 pf: 0.28″ x 0.195″ x 0.070″.



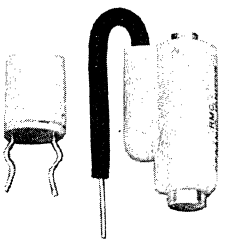
Nytronics, Inc.

RMC DISCAPS



Alumina Ceramics

RMC's expanded capabilities include the production of High Alumina substrates with a range of finishes suitable for both thick and thin film deposition. Flat plate and extruded rod shapes are available.



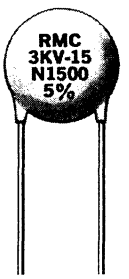
Piezoelectric Ceramics

RMC can now supply your requirements for a variety of Piezoelectric Devices. Radial mode resonators for filter applications and spark ignition devices are currently available.

Low Voltage Subminiatures

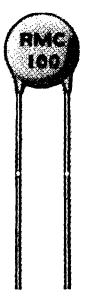
For applications requiring components with higher capacitance values at lower voltages ratings, RMC lists:

TYPES CM, SM, BT, or TA



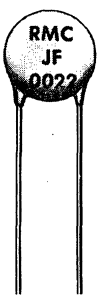
T.C. High Voltage

These components are suited to high frequency, corona free applications. Available in working voltages from 2000 to 6000 VDC in temperature coefficients of N-750, N-1500 or N-2200.



Temperature Compensating TYPE C or CG

Type C DISCAPS are designed for applications requiring a rating of 1000 volts D.C. Where a 500 volt D.C. rating is adequate. Type CG can be specified. Both types meet or exceed EIA specifications and are ideal for VHF or UHF applications.



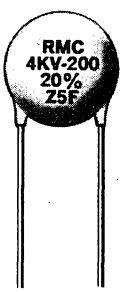
High Dielectric Constant

The industry's broadest line of high dielectric constant ceramic disc capacitors in wide capacitance ranges, select working voltages and tolerances.

Featured are:

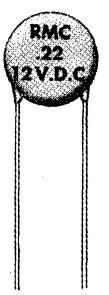
TYPES B, JL, JF, JE, JK, BA, JG, BG

Complete specifications listed in detailed RMC catalog.



High K-High Voltage

Maximum capacities combined with high voltage ratings are available in this line. Rated from 2000 to 6000 VDC in Z5F or Z5U temperature coefficients. Tolerances are ±10%, ±20%, +80-20% or GMV. **NEW! Additional ratings of 7½, 10 and 15 KV are now available for high voltage supply applications.**

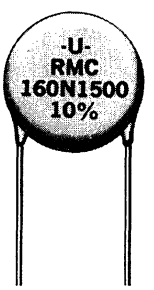


Magnacaps

Designed for application in low voltage circuits, Magnacaps combine very high capacitances with small physical sizes. These components are available in 3, 12, 16 and 25 volt ratings in wide capacity ranges.

TYPES M3, M12, M16 and M25

THE STANDARD OF PERFORMANCE THROUGHOUT THE ENTIRE ELECTRONICS INDUSTRY



Specials

Widest variety of special components for varied applications. Featured are Type U, U.L. approved parts for both "Live Bypass" and "Across-the-line" applications, TC Soldering, Sparkcaps, and Low Voltage "Chip" capacitors. For special requirements, contact RMC.

Standard Mallory components are available from authorized Mallory distributors throughout the United States.

THINLINE

Mucon's Thinline Capacitors are made of the following 16 different ceramic bodies for a broad choice of size and electrical properties:

Temperature-Compensating Materials:	NP0	N080	N150
	N220	N330	N450
	N750	N1400	N2400
	N3300	N4700	N5600
General Purpose Materials:	LOW-VAR, STABLE-K, HIGH-K & SUPER-K for wide range of stability and capacitance.		

SPECIFICATIONS

Capacitance:
Range: TEMP.-COMP. BODIES 1/2 pf - 2200 pf; GEN. PURPOSE BODIES 50 pf - 150,000 pf
Voltages: 25 WVDC, 50WVDC, 200 WVDC and 500 WVDC
Leads: Tinned Copper, Nickel or Dumet to MIL Spec.
Shapes: Square, rectangular, single or multiple element.

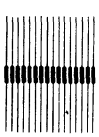
NARROW-CAPS®

NARROW-CAPS are designed for 1/10" modular spacing on printed circuits, or for cordwood applications.

SPECIFICATIONS

Capacitance:
Range: 5 pf - 100.000 pf
Voltages: 10 WVDC - 50 WVDC
Sizes: .095" max. wide x 1/4" max. long x .095" max. thick through 750 pf. Larger values 5/16" max. long.
Leads: #26 Tinned Copper, Nickel or Dumet to MIL Spec.

SLIM-CAPS®



Designed for applications which require capacitors slimmer than NARROW-CAPS. SLIM-CAPS are .065" wide x .065" thick max. Body lengths from .100"—.250" max.

SPECIFICATIONS

Capacitance
Range: 1/2 pf - 20,000 pf
Voltages: 50 WVDC
Leads: #30 Tinned Copper, Nickel or Dumet to MIL Spec.

STANDOFFS

Standoffs are furnished in the shapes shown above, using any one of the Mucon temperature-compensating bodies or general purpose bodies.

RIBBON LEADS

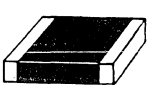
Style RLA

Size and specifications same as "Thinline" capacitors shown above, except radial and axial tinned copper ribbon leads, approximately .006" thick x 3/32" wide for units with max. size of .150" and up; .045" wide for smaller units.

CHIPS SINGLE LAYER

Sizes: .030" Sq. and up
Capacitance: SUPER-K Ceramic 150 PF. to 10,000 PF.
HIGH-K " 100 PF. to 5,000 PF.
STABLE-K " 50 PF. to 2,700 PF.
LOW-VAR " 20 PF. to 1,000 PF.
TEMP. COMP. " 1 PF. to 330 PF.
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

CHIPS MONOLITHIC MULTILAYER



Sizes: From .050" x .050" x .050" to .610" x .310" x .080"
Capacitance: STABLE-K Ceramic 10 PF. to 2 MF.
NPO " 1 PF. to .027 MF.
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

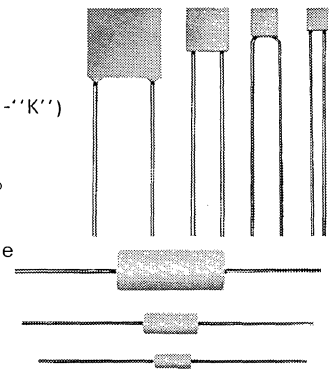
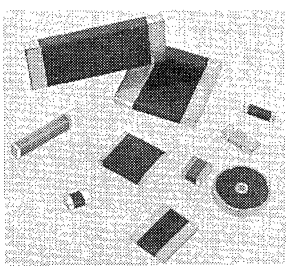
CERAMIC CAPACITORS

RECTANGULAR AND TUBULAR STANDARDS
CAPACITANCE VALUES
from 5 pf to 100 mfd
(stable-intermediate and Hi-"K")
from 1 pf to .2 mfd (NPO)
VOLTAGE: 25 to 500 VDC
TOLERANCE: down to .25%
TEMPERATURE RANGE:
-55°C to +150°C
meets or exceeds applicable portions of
MIL-C-11015
MIL-C-39014



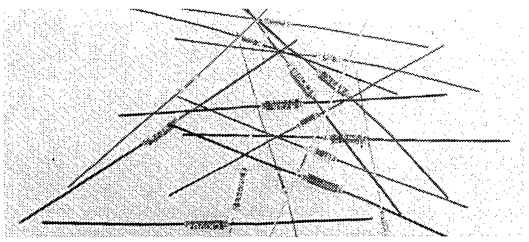
CHIPS FOR HYBRID CIRCUITRY

CAPACITANCE VALUES
from 5 pf to 2 mfd
(medium "K" dielectric)
from 1 pf to .2 mfd (NPO)
VOLTAGE: 25 to 100 VDC
TOLERANCE: down to .25%
TEMPERATURE RANGE:
-55°C to +125°C



NEPTUNE CERAMIC CAPACITORS

HERMETICALLY SEALED GLASS ENCLOSED TUBULAR
CAPACITANCE VALUES
from 10 pf to .0018 mfd (NPO)
TOLERANCE: 10% and 20% standard
TEMPERATURE RANGE: -55°C to +125°C
meets or exceeds applicable portions of
MIL-C-11015
MIL-C-39014



SUBMINIATURE RFI FILTERS
VOLTAGE RATING:
50, 100, 200 VDC—115 VAC
OPERATING CURRENT:
60 ma thru 15.0 amps
OPERATING TEMPERATURE:
-55°C to +125°C

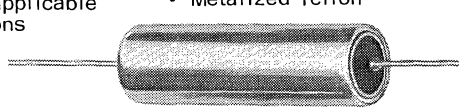
HERMETIC CAPACITORS

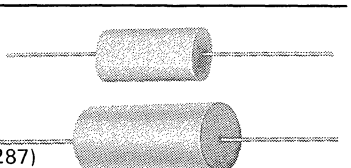
Metal Case
with compression glass seals
APPLICABLE MIL SPECIFICATIONS
MIL-C-25
MIL-C-14157C
MIL-C-18312
MIL-C-19978
Available in all capacitance values, voltages, and tolerances per applicable MIL specifications

- Paper-Foil
- Metalized Paper
- Mylar
- Metalized Mylar
- Polycarbonate
- Metalized Polycarbonate
- Polystyrene
- Metalized Polystyrene
- Teflon
- Metalized Teflon



"RAP-N-FIL" CAPACITORS

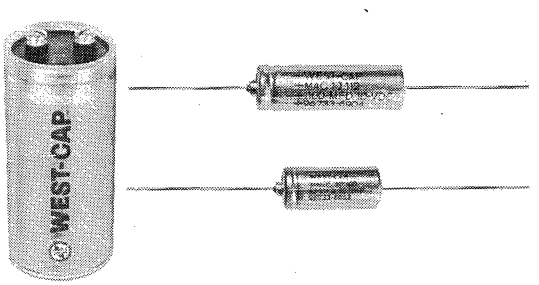
CAPACITANCE VALUES
from .001 mfd to 12 mfd
VOLTAGE: 50 to 1000 VDC
TOLERANCE: down to 1%
MYLAR: -55°C to +125°C
(CTM style meets MIL-C-27287)
POLYSTYRENE: -55°C to +85°C
METALIZED MYLAR: -55°C to +125°C
METALIZED POLYCARBONATE: -55°C to +125°C



ELECTROLYTIC CAPACITORS

SERIES MAC Axial lead
RATINGS: 2 mfd to 70,000 mfd
from 3 VDC to 150 VDC

SERIES WHC COMPUTER GRADE
RATINGS: 200 mfd to 100,000 mfd
from 5 VDC to 150 VDC. Voltages in excess of 150 VDC to 500 VDC on special order.



SAN FERNANDO ELECTRIC MANUFACTURING COMPANY is qualified to Military Specifications listed.

G* — *Hermetically, sealed, rectangular*

17 SERIES — METALIZED MYLAR

For circuits that require the ultimate electrical properties Non Polar coupled with the smallest size over a wide temp. range.

- IR: 50K Meg × MFD Min. +25° C
- DF Less Than 1% IKHZ at +25°C
- Dielectric Strength: 200% of rated VDC 1 Min. Max.
- Temperature Range: −55° C to +125° C
- Voltage versus Temp.: 100% rated Voltage to 100° C 50% derating to +125° C
- Capacity versus Temp.: −55° C to +25° C, +5% change; +25° C to +85° C, +3%, and +25° C to +105° C, +7% change
- Quality Control and Production Tests consist of 100% group A requirements of MIL C 18312 on hermetic seal style E and all tests except for moisture leak tests on styles W-U-R-N-B-D.

22 SERIES — METALIZED POLYCARBONATE

For circuits that require flat T.C., low losses, small size over a wide temperature and frequency range. Used in many wave filter, discriminator and critical timing circuits.

- IR: 100K Meg × MFD Min. at +25 C
- DF less than .3% measured IKHZ at 25 C
- Dielectric Strength: Up to 200% of rated VDC Max. 1 Min.
- Temperature Range: −55° C to +105 C. When properly encased will operate to +125° C
- Temperature Coefficient: From −55 C to +25° C, 1.5% max change; +25° C to +105° C, −.7% max. change.
- QC & Production Tests consist of 100% to group A requirements MIL C 18312 on hermetic seal style E and to all except moisture leak test on styles W-U-R-N-B-D.

13 SERIES — POLYSTYRENE

For the instruments that require long term stability, low leakage, minimum dielectric absorption.

Used in many critical computer timing and hybrid circuits.

- Temperature Range: −55 C to +85 C
- IR: 100K Meg × MFD Min +25 C
- DF: .05% Max IKHZ at +25 C
- TC: 130 PPM / C +20 PPM
- Quality and, Production test consists of 100% to group A level of MIL C 19978 on style E and all requirements except moisture leak test on style R.

*The pictorial "G" style series displayed are not standard; however depicts two popular methods of mounting features. Many mounting and terminal features can be designed and manufactured to your specifications by request to our representatives or factory direct, without delivery delay.

10 SERIES — MYLAR FOIL

For the instrument that requires high reliability, precise characteristics year after year. Used in many communication, telephone, tracking and test instrument devices.

- Temperature Range: −55° C to +125 C
- IR: 50K Meg × MFD Min. at +25° C
- Dielectric Strength: 200% of rated VDC max. 1 Min.
- DF less than .5% IKHZ at 25° C
- Temperature Coefficient:
  +5% change from −55° C to +25° C
  +5% change from +25° C to +85° C
  +9% change from +25° C to +105° C
  +14% cnange from +25° C to +125° C
- QC and Production Tests are 100% to group A of MIL C 19978 on hermetic style E and all tests except moisture leak requirement style R.

ORDERING AND PART NUMBER INFORMATION

The dimensional tolerances for case styles R-W-U-D are ±.05. Styles G-B-N-E are ±.031, on length, and ±.015 for other dimensions. All units are available in any value, ranging from .001 MFD to their maximum capacity, with tolerances to ±1%. Standard tolerance is ±20%. Other types of leads, configurations, and encasements are available upon request to meet your special requirements.

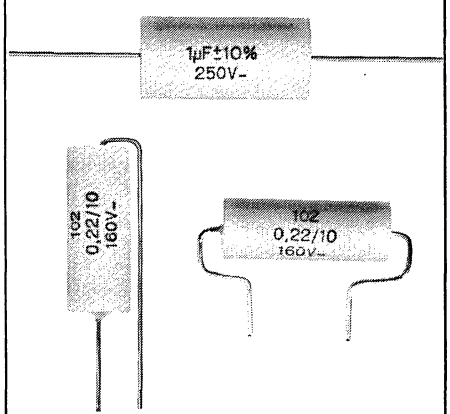
Seacor delivers.

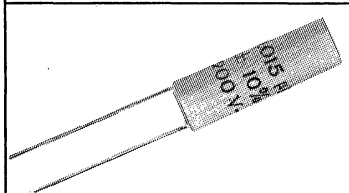
A single source for your wound capacitor needs.

Seacor offers a broad line of wound dielectric capacitors. With the aid of our engineering consultation service, you may choose the style and dielectric that are most beneficial to your design, at lowest cost. Our proven quality and reliability over the years, coupled with excellent delivery records, enhance the value of this capacitor line. The listing below is only a portion of our products. Your inquiry on your capacitor needs is welcome.



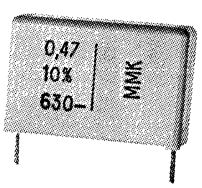
Tubular, Axial Lead

SFC	Polystyrene Foil, 63-160V, 20 PF to 10,000 PF, 1%, 2½%, 5%, 10%, 20%
102	Polyester Foil, 160-400-630-1000V, 1000 PF to 1 MF, 10%, 20%
117	Polyester Foil, 160-250-400V, 100 PF to 10,000 PF, 5%, 10%, 20%
129	Polyester Foil, 1000-1250-1500V, 1000 PF to .33 MF, 10%, 20%
105	Metallized Polyester, 100-250-400-630-1000V, 1000 PF to 10 MF, 5%, 10%, 20%
107	Metallized Polyester, 100-160-250-400V, 1000 PF to 10 MF, 2½%, 5%, 10%
108	Polycarbonate Foil, 100-160-250-400V, 100 PF to 10,000 PF, 5%, 10%, 20%
112	Metallized Polycarbonate, 100-250-400-630-1000V, 1000 PF to 10 MF, 5%, 10%, 20%
116	Polystyrene Foil, 63-100-250-630-1000V, 100 PF to .6 MF, 1¼%, 2½%, 5%, 10%



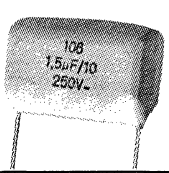
Tubular Molded Case, Radial Lead

103	Polyester Foil, 630-1000-1250-1500V, 1000 PF to .47 MF, 10%, 20%



Molded Case, Radial Lead

MMK	Metallized Polyester, 100-250-400-630V, .01 MF to 6.8 MF, 10%, 20%
120	Metallized Polyester, 63-100-250-400-630-1000V, 1000 PF to 10.0 MF, 10%, 20%
161	Metallized Polycarbonate, 63-100-250-400V, 1000 PF to 10 MF, 2½%, 5%, 10%
127	Metallized Polypropylene, 250 VAC, 4 MF to 5.4 MF, 3%, 5%, 10%



Epoxy Dipped, Radial Lead

106	Metallized Polyester, 250-400-630-1000V, 1000 PF to 2.7 MF, 10%, 20%

Tubular Axial Lead, Offset

SF	Polystyrene Foil, 25-63-160-630V, 100 PF to .1 MF, 1%, 2½%, 5%, 10%
101	Polyester Foil, 160-400-630V, 1000 PF to .47 MF, 10%, 20%
110	Polycarbonate Foil, 160-400-630V, 5 PF to .015 MF, 10%, 20%

Other dielectrics • special windings • shapes and tolerance • taped on reels available. Please inquire.

598 Broadway, Norwood, New Jersey 07648 (201) 768-6070

SEACOR INC.

SOSHIN MICA CAPACITORS

FMCON

A new silvered mica capacitor for radio, TV applications. Low temperature coefficient, small, economical. FMCON for 50WV. V-FMCON for transistor circuit.

DIPPED MICA CAPACITORS

Temperature tests prove superiority: These dipped mica capacitors withstand 2000 hrs at 40°C, 90% to 95% humidity. Usable temperature range −55°C to +150°C.
Miniature type, DM05, also available.
All types meet MIL-C-5D specifications.

MC CAPACITORS

A combination silvered mica capacitor and temperature-compensating ceramic capacitor with the best characteristics of both, temperature coefficient to 0.05μF. Stable over long periods, small with excellent space factor.
High Q, value small dissipation factor.
Excellent moisture resistance.

Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

More than 6,000 manufacturers of electronic components, materials, instruments, assemblies, systems and key services are listed in the Yellow Section. An identical Yellow Section appears in each of the three volumes of **eem**, listing addresses, phone numbers and sales managers' names. TWX numbers are also included where available. **Boldface** listings indicate that detailed information on the manufacturers' products is cataloged in the White Section of **eem. Boldface** listings also indicate that local sales offices or representatives are listed for that manufacturer.

Ceramic Capacitors

Southern Electronics ceramic capacitors consist of alternate layers of high permittivity ceramic and noble metal electrodes fired together to form a monolithic structure. Unique processing techniques permit the volume production of extremely thin sections of ceramic. These thin sections together with the external parallel connection of the individual sections increases the volumetric efficiency of these devices by a factor of approximately 100 compared to conventional "single-sheet" ceramic structures.

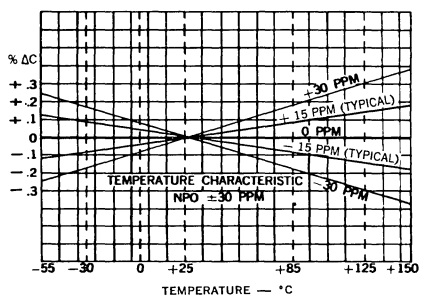
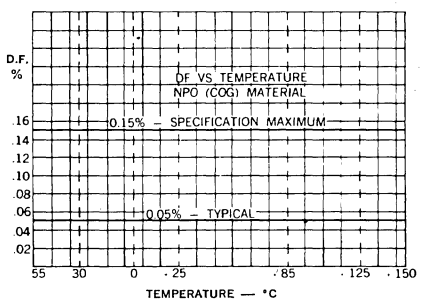
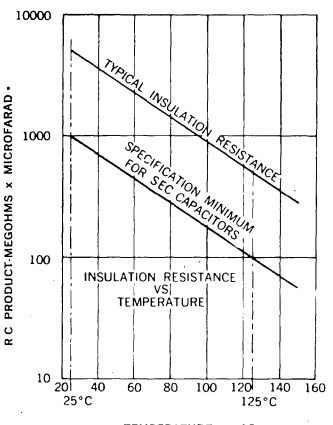
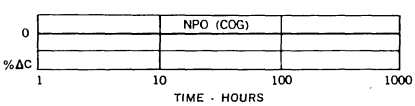
Performance Data

NPO (COG) Ceramic SEC's NPO Ceramic Formulation is a highly stable non-ferroelectric composition which exhibits high Q, I.R. and negligible changes in capacitance over a wide range of temperatures, frequencies and bias voltages. Ideally suited for tuned circuits, timing circuits, and fast rise time applications.

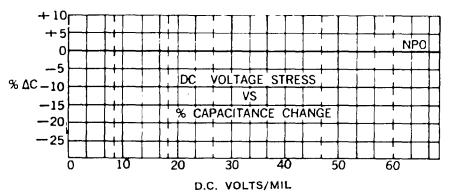




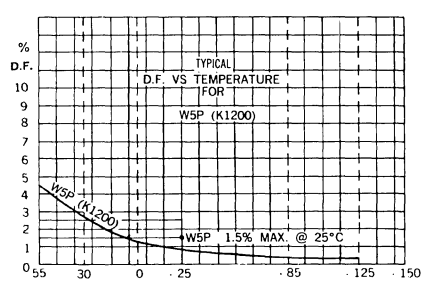


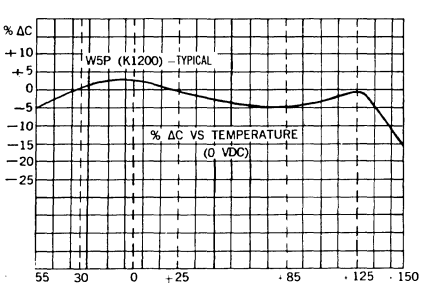


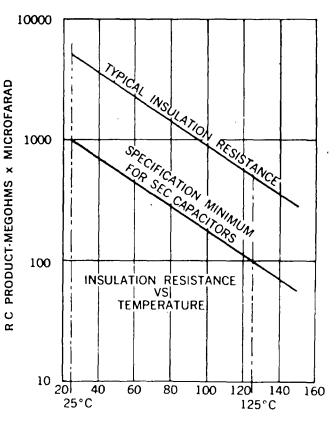
TYPICAL CAPACITANCE AGING % ΔC VS TIME

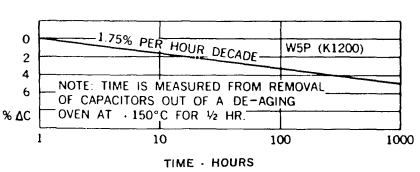


K1200 (W5P) Ceramic SEC's K1200 material is a ferroelectric dielectric system with a K of approximately 1200 at 25°C. It offers the advantage of approximately 40 times the volumetric efficiency of the NPO material, and exhibits moderate changes in capacitance and D.F. with temperature, frequency and bias voltages. Suited for by-pass, coupling, filtering and general circuitry.









TYPICAL CAPACITANCE AGING % ΔC VS TIME

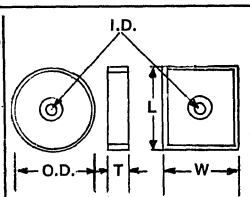
Feed-Thru "Chip" Capacitors

PART NUMBER CODE:

SEC 1300 FT 102 K A (*)

- Style
- Type
- Capacitance
- Tolerance
- Voltage
- Optional Electrode Material

*Standard — Palladium Silver
Optional: G = Gold
P = Palladium Gold
T = Tinned Silver
N = Nickel



*M.B. = Width of Metalized Band

Specifications:

Temperature range: —55°C to +125°C
Temperature characteristics: W5P (±10%)
Dissipation factor: 1.5% max. @ 1 KHz, 25°C
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less, @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

CAPACITANCE CODE

TOLERANCE CODE	CAPACITANCE CODE EXAMPLE
J = ±5% K = ±10% M = ±20% Note: Minimum Tolerance ±.5 pf	below 10 pf: 1 R2 = 1.2 pf "R" signifies decimal point. 10 pf and above: 101 = 100 pf 1st two digits are significant factors & 3rd digit signifies number of zeroes.

Axial Lead Tubular K1200 (W5P) Capacitors

PART NUMBER CODE:

SEC 50 BX 101 K A (*)

- Style
- K1200 Ceramic
- Capacitance
- Tolerance
- Voltage
- Optional Lead Material

Specifications:

Temperature range: —55°C to +125°C
Temperature characteristics: W5P (±10%)
Dissipation factor: 1.5% max. @ 1 KHz, 25°C
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less, @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

CAPACITANCE CODE	
TOLERANCE CODE	CAPACITANCE CODE EXAMPLE
J = ± 5% K = ± 10% M = ± 20% Note: Minimum Tolerance ±.5 pf	below 10 pf: 1R2 = 1.2pf "R" signifies decimal point. 10 pf and above: 101 = 100 pf 1st two digits are significant factors & 3rd digit signifies number of zeroes.

General Electrical Specifications

Type P POLYSTYRENE

Operating Temperature: −55°C to +85°C ■ **Insulation Resistance (25°C):** 1,000,000 meg x mfd; need not exceed 2,000,000 megohms ■ **Dissipation Factor:** 0.02% ■ **Temperature Coefficient:** −100 ppm/°C typical ■ **Test Voltage:** 200% of rated voltage.

Type M MYLAR

Operating Temperature: −55°C to +85°C; to +125°C with 50% voltage derating ■ **Insulation Resistance:** 100,000 meg x mfd; need not exceed 200,000 megohms ■ **Dissipation Factor:** 0.3% typical ■ △ **Capacitance vs. Temperature:** −5% at −55°C; +3% at +85°C; +15% at +125°C ■ **Test Voltage:** 200% of rated voltage.

Type R METALLIZED MYLAR

Operating Temperature: −55°C to +85°C; to +125°C with 50% voltage derating ■ **Insulation Resistance (25°C):** 50,000 meg x mfd; need not exceed 100,000 megohms ■ **Dissipation Factor(25°C):** 0.5% typical (1% max.) ■ △ **Capacitance vs. Temperature:** −5% at −55°C; +3% at +85°C; +15% at +125°C ■ **Test Voltage:** 150% of rated voltage.

Type L POLYCARBONATE

Operating Temperature: −55°C to +125°C ■ **Insulation Resistance (25°C):** 300,000 meg x mfd; need not exceed 600,000 megohms ■ **Dissipation Factor (25°C):** 0.1% typical (0.15% max.) ■ △ **Capacitance vs. Temperature:** −1.5% at −55°C; ±1% at +125°C ■ **Test Voltage:** 200% of rated voltage.

Type B METALLIZED POLYCARBONATE

Operating Temperature: −55°C to +125°C ■ **Insulation Resistance (25°C):** 100,000 meg x mfd; need not exceed 200,000 megohms ■ **Dissipation Factor (25°C):** 0.2% typical (0.3% max.) ■ △ **Capacitance vs. Temperature:** −1.5% at −55°C; ±1% at +125°C ■ **Test Voltage:** 150% of rated voltage.

Type T TEFLON

Operating Temperature: −55°C to +160°C; to +200°C on request ■ **Insulation Resistance (25°C):** 1,000,000 meg x mfd; need not exceed 2,000,000 megohms ■ **Dissipation Factor (25°C):** 0.01% ■ **Temperature Coefficient:** −200 ppm/°C typical ■ **Test Voltage:** 200% of rated voltage.

Type G METALLIZED TEFLON

Operating Temperature: −55°C to +140°C; to +200°C on request ■ **Insulation Resistance (25°C):** 500,000 meg x mfd; need not exceed 1,000,000 megohms ■ **Dissipation Factor (25°C):** 0.1% typical (0.2% max.) ■ **Temperature Coefficient:** −50 ppm/°C typical ■ **Test Voltage:** 150% of rated voltage.

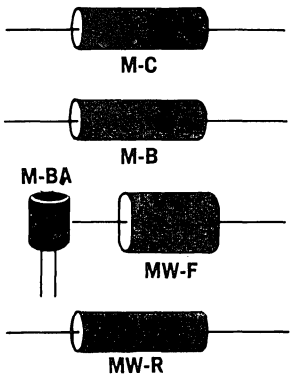
CAPACITORS

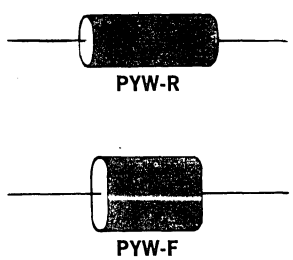
Standard CONDENSER CORPORATION

POLYESTER FILM



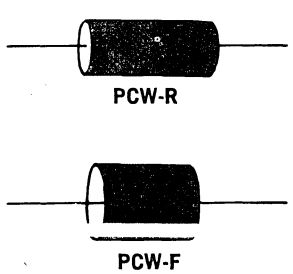
Type M-C (Ceramic case), Types M-B and MB-A (Phenolic case), Polyester Film Dielectric. Operating temperature: −55°C to +85°C without derating. Values to 1.00 MFD from 200 to 600 V.D.C. Types MW-R and MW-F, Polyester Tape Wrap, thermosetting resin end seals. Operating temperature: −55°C to +100°C without derating. In capacities up to 10.0 MFD, Type MW-R from 50 to 600 V.D.C., Type MW-F from 100 to 600 V.D.C. All types extended foil construction. With humidity-resistant synthetic resin end seals. Capacity tolerance ±20%. Closer tolerances available on request.

POLYSTYRENE FILM



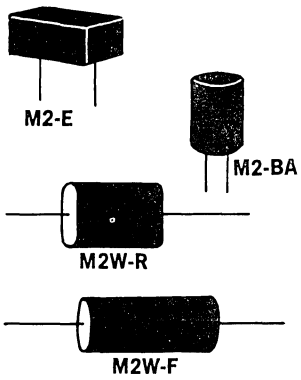
Extended foil construction, Polyester film wrapped, thermosetting resin end fill. Types PYW-R and PYW-F values up to 3.0 MFD from 50 to 600 V.D.C. Operating temperature: −55°C to +85°C without voltage derating. Dissipation factor: .1%. Temperature coefficient: −120 ±50 PPM/°CQ: 2500 or better at 1 Megahertz. Insulation Resistance: 100,000 Megohms X Microfarads at 25°C, 50,000 Megohms X Microfarads at 85°C. Dielectric Absorption: less than .05% when tested at 25°C.

POLYCARBONATE AND FOIL



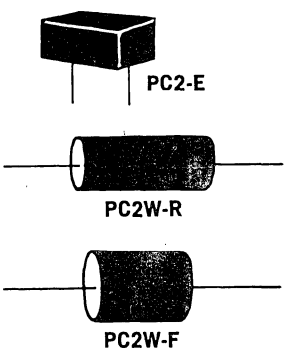
Types PCW-R and PCW-F (wrap and fill), values to 10.0 MFD from 50 to 200 V.D.C. Operating temperature: −55°C to +125°C without voltage derating. Dissipation Factor: shall be 0.5% or less when measured at 25°C and 1 KHz. Insulation Resistance: minimum shall be 50,000 Megohm-Microfarad when measured at 25°C, 500 Megohm-Microfarad when measured at 125°C. Dielectric Absorption: less than .2%. (Typical Applications: communication and precision test equipment, computers, timing circuits, navigation, aircraft and other precision circuits where low dielectric absorption, excellent retrace are a factor.)

METALIZED POLYESTER FILM



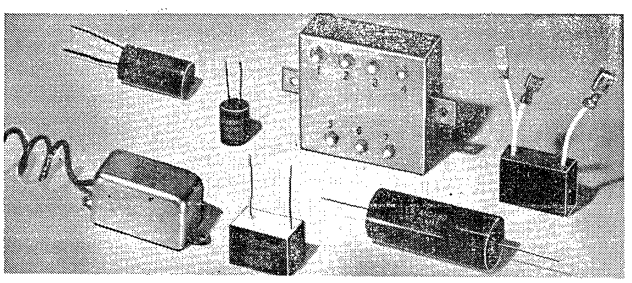
Thermosetting resin filled, radial leads. Type M2-E (Rectangular Epoxy Case) available in up to 5.0 MFD from 50 to 100 V.D.C. Type M2-BA (Round Phenolic Case) values up to 10.0 MFD from 50 to 200 V.D.C. Types M2W-R and M2W-F, Polyester Tape Wrap, thermosetting resin end seals. Available in values from .01 up to 20.0 MFD from 100 to 600 V.D.C. Operating temperature: −55°C to 100°C without derating. +100°C to +125°C with 50% voltage derating. Capacity tolerance: ±20% is standard. ±10%, ±5%, ±3%, ±2% and ±1% are also available.

METALIZED POLYCARBONATE



Type PC2-E (Rectangular Epoxy Case, radial leads), available in up to 5.0 MFD from 50 to 100 V.D.C. Types PC2W-R and PC2W-F (wrap and fill), values up to 20 MFD from 100 to 600 V.D.C. Operating temperature: −55°C to +125°C without voltage derating. Dissipation Factor: shall be 0.5% or less when measured at 25°C and 1 KHz. Units larger than 1.0 MFD shall be measured at 60 Hz. Temperature Coefficient: 50 PPM/°C or less over a temperature range of 25°C to 85°C. Insulation Resistance: minimum shall be 50,000 Megohm-Microfarad when measured at 25°C, 500 Megohm-Microfarad when measured at 125°C. Dielectric Absorption: less than .2%.

R-C NETWORKS



Custom made. For RFI suppression, arc suppression, relay contact protectors, noise filters, spark suppression. Available in any size, power rating, combination or configuration. For example: Capacitor Section can be Mylar, Metalized Mylar, Polystyrene, Polycarbonate . . . any voltage or tolerance. Resistor Section can be Composition, Wire-wound, Metal Film, Deposited Carbon . . . in any wattage or tolerance. Total Networks available in tolerances as close as ±1%. Manufactured under rigid Quality Control to meet specific requirements.

Standard CONDENSER CORPORATION

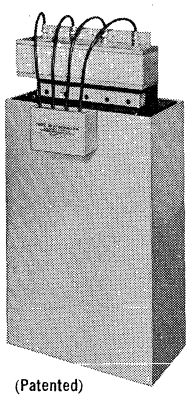
1065 W. Addison Street, Chicago, Illinois 60613 • (312)-327-5440

HIGH-VOLTAGE FAST-DISCHARGE CAPACITORS

Developed in response to customers' inquiries, these capacitors meet exacting requirements in energy discharge applications.

PULSE LASER CAPACITOR
(Patented)

Model ESC-302: 0.01μf, 20kv, 3 nanohenries; life: 10^8 shots at a repetition of 100 pps. Size: 4½" dia x 3" high.

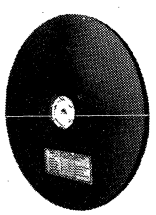


LOW INDUCTANCE CAPACITOR & SWITCH

- Available from 4.5μf-60μf at 10-25 kV.
- Maximum self inductance: 5 nanohenries.

(Patented)

Series ESC-248A heavy duty energy storage capacitors, shown with mating discharge switch Model SBG-5.



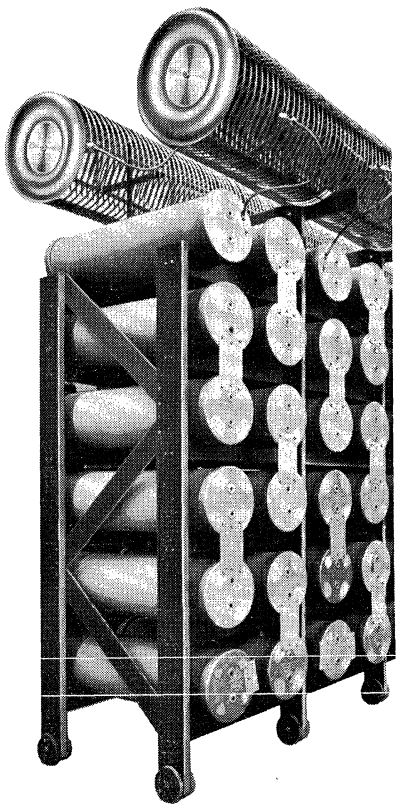
COAXIAL-DISC CAPACITOR
(Patented)

Model ESC-247D
- 0.5μf, 20kV, 1 nanohenry.

Famous low inductance energy storage capacitors all have maximum inductance of one nanohenry, are available with values of 0.001μf to 0.5μf at 20kV. Ideal for dye laser and flash lamp applications—in use throughout the world.

PULSE-FORMING NETWORKS

...from the smallest to the largest



Model PCE-1: Pulse-forming networks installed at Griffis AFB. Peak charge voltage: 252kv; peak power: 180 megawatts; PRF: 180 pps; ripple: less than 1%.

TOBE DEUTSCHMANN pulse-forming networks range from miniature units to high-power installations like the one shown above. This unit, designed and built to a rigid performance specification, is more than 8 feet high, 5 feet wide, and 22 feet long.

Whatever your requirements for PFN's, low-Z pulse lines, or pulse capacitors, we can design and build reliable units to satisfy your need.

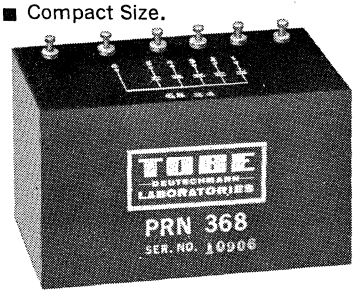
MICAP™

MICA-PAPER

CAPACITORS

rated for high-voltage pulse & dc applications feature:

- High Reliability.
- Encapsulated Construction.
- Extremely Low Dissipation Factor.
- Close Tolerance Matching Between Sections.
- Compact Size.

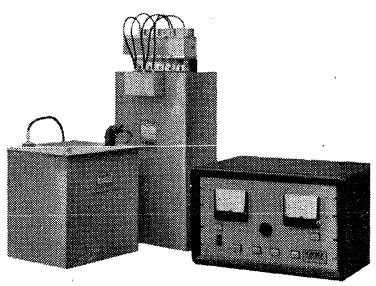


Size 4½" x 2 9/16" x 2¼" high.

Developed for airborne radar modulators, TDL mica-paper capacitors are available as multiple section E-line pulse networks with internal or external coil. Prototype quantities to your specifications can be supplied on short delivery.

NEED A COMPLETE

DISCHARGE SYSTEM?



Fast discharge pulse energy system, Model ESB-118. Rated: 3000J, 20kV, and 0.5 megampere peak current. In addition to catalog systems, custom equipment is available.

Our units have proved their reliability worldwide in both research and industrial installations. For high voltage capacitors, discharge switches, pulse networks, pulse capacitors, write or call . . .

GENERAL SPECIFICATIONS

W Dielectric Characteristics:

Dissipation Factor:	Less than 2.5% at 1 KHz
Insulation Resistance:	100,000 megohms or 1000 megohm-microfarads, whichever is less at 25°C
Temperature Coefficient:	±15%, —55 to +125°C
Dielectric Strength:	2.5 x rated voltage, (250 VDC for C19 Series)

Meets or exceeds applicable requirements of MIL-C-11015 and MIL-C-39014.

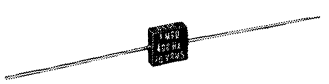
NPO Dielectric Characteristics:

Dissipation Factor:	Less than .15% at 1 MHz
Insulation Resistance:	100,000 megohms or 1000 megohm-microfarads, whichever is less at 25°C
Temperature Coefficient:	0 ±30 PPM/°C, —55 to +125°C
Dielectric Strength:	2.5 x rated voltage

Meets or exceeds applicable requirements of MIL-C-20.

LEADED TYPES

Series	Capacitance	Voltage	Dielectric
TUBULAR / EPOXY CASE / AXIAL LEADS			
C10	1.0 pF-3.0 Mfd	50/100/200 VDC	W
C33 — High Stability	.5 pF-.1 Mfd	50/100/200 VDC	NPO
C22	10 pF-.22 Mfd	50/100 VDC	W
RECTANGULAR / EPOXY COATED / AXIAL LEADS			
C31	1.0 pF-1.0 Mfd	50/100/200 VDC	W
C38 — High Stability	5.6 pF-.01 Mfd	50/100/200 VDC	NPO
RECTANGULAR / EPOXY CASE / AXIAL LEADS			
C19 — High Current	.01 Mfd-10 Mfd	400 and 1200 Hz at 70 VRMS	W
RECTANGULAR / EPOXY CASE / RADIAL LEADS			
C12	1.0 pF-10 Mfd	50/100/200 VDC	W
C37 — High Stability	5.0 pF-.10 Mfd	50/100/200 VDC	NPO



Capacitance tolerances available: W — ±5, 10, 20%; NPO — ±1, 2, 3, 5, 10, 20% and 0.5 pF (1 pF to 10 pF)
To order specify: Series, Capacitance, Tolerance and Voltage (Frequency for C19)

HUMISEAL COATINGS

GENERAL CHART

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protective Coatings and their principal properties. These have been tabulated in order to facilitate comparison of their characteristics and selection of the most suitable type for a specific application. In addition to these HumiSeal types we manufacture a variety of coatings for special purposes, including high temperature applications. Should none of the coatings listed in this chart fulfill your requirements, we suggest that you contact us for recommendations.

	PROPERTIES OF LIQUID HumiSeal										THERMAL PROPERTIES		
HumiSeal Type[1]	Specific Weight (lbs. per gallon)[2]	Solids Content (% by weight)[3]	Viscosity, with catalyst when applicable (centistokes)[4]	Flash Point (°F)[5]	Drying Time for Handling[6]	Recommended Curing Conditions	Time Required to Reach Optimum Properties	Pot Life, at Room Temperature	Shelf Life, at Room Temperature	Coverage per gallon (in sq. ft.) After One Dip	Continuous Use Temperature Range (°F)	Thermal Shock Test[7]	Solderability[8]
1B12	7.3	20	30	40	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	550	−75°F to +280°F	Passes	Good
1B15	7.6	35	470	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	−75°F to +270°F	Passes	Good
1B31	7.6	35	160	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	−75°F to +270°F	Passes	Good
1A20	8.5	50	120	90	60 min.	24 hrs. at room temp.	1 week	6 mos.	6 mos.	375	−70°F to +250°F	Passes	Excellent
1A27	8.0	50	5000	100	15 min.	24 hrs. at room temp.	1 week	1 year	1 year	450	−90°F to +250°F	Passes	Excellent
1A33	7.7	44	160	30	15 min.	24 hrs. at room temp.	1 week	1 year	1 year	300	−90°F to +250°F	Passes	Excellent
2A56	7.8	36	<20	70	60 min.	24 hrs. at room temp. or 2 hrs at 170°F	1 week	4 hrs.	6 mos.	650	−70°F to +250°F	Passes	Excellent
2B13	7.5	42	50	40	30 min.	90 min. at 200°F	1 week	24 hrs.	1 year	480	−70°F to +270°F	Passes	Poor
2A51	9.2	100	6000	non flammable	2 hrs.	24 hrs. at room temp. or 2 hrs. at 200°F	1 week	6 hrs.	6 mos.	200	−70°F to +250°F	Passes	Poor
2A53	7.8	54	300	70	30 min.	2 hrs. at 200°F	1 week	24 hrs.	1 year	400	−70°F to +250°F	Passes	Poor

HumiSeal TYPES LISTED IN BOLD PRINT COMPLY WITH THE REQUIREMENTS OF MIL-I-46058B

All technical data in this bulletin are based on test results using the stated standards and are believed to be correct. However, since the end use of HumiSeal materials (and the manner of storing and handling them) is beyond our control, we make no warranty — expressed or implied — as to the fitness of use, results to be obtained from or effects of use with respect to these materials. Their use shall be solely by the judgment of and at the risk of the end-user notwithstanding any statement contained in this bulletin.

1. The first digit in the type number specifies whether the product is a one-, or a two-component system.
2. Fed-Std 141a, Method 4184.
3. Fed-Std 141a, Method 4044.
4. Fed-Std 141a, Method 4287.
5. Fed-Std 141a, Method 4291.
6. Fed-Std 141a, Method 4061.
7. Mil-I-46058B.
8. Visual evaluation for ease of soldering with an 85 watt iron through a 2 mil film.
9. Fluorescent or color coding dye may be added if required.
10. Fed-Std 141a, Method 2121.
11. Fed-Std 406, Method 7031, Procedure A.
12. Fed-Std 141a, Method 6303.
13. ASTM-D150-65T, at 1 MHz and 25°C.
14. Mil-I-46058B. Insulation resistance during 10th cycle, at 65°C and 98% RH.

FOR ELECTRONICS

OF PROPERTIES

HumiSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-five gallon drums. HumiSeal types 1B15 and 1A27 are also available in 16-ounce aerosol containers. All HumiSeal types listed in this chart may be applied by dip, brush or spray. Our recommended techniques for the proper application of coatings and the preparation of the substrates are described in our booklet titled "How to Use Protective Coatings Efficiently" which will be mailed to you on request (Ask for Bulletin No. 79).

DESCRIPTIONS OF PAINTS LISTED ABOVE

NOTES ON DESCRIPTIONS OF PAINTS: Most of the coatings have been in use (with continuing improvement) for 5 to 20 years. They have many uses which are far removed from the uses which are mentioned. The indicated resistance per square is our production test value. Resistances obtained by the user may be varied by changing the thickness, by absorption into the substrate, by partial dissolving into undercoats or overcoats, etc. Resistance per square is the resistance measured between two opposite sides of a square area of the paint painted between parallel electrodes of substantially zero resistance. If paint thickness remains constant then resistance is independent of dimensions and a 1" square will have the same resistance as a 1 mile square.

We recommend a phone call to discuss proposed applications. The price given is for the smallest stock container and is included only for convenience in ordering experimental quantities. Prices in larger production quantities is substantially lower in all cases. These paints are usually available in production quantities on one or two day notice. We also have or can make a wide range of other conductive coatings.

SC12, SC13, AND SC15 AIR DRYING SILVER MICROPAINTS. These are highly conductive coatings for "wires," electromagnetic shielding, "soldering" fine wires, contacts on magnetic tape, coating of experimental parts of paper, plastic, wood, etc. to simulate metal parts, and a wide variety of other uses. They have been used by magicians and to indicate the fracture of rocks. Resistance of SC12 is less than 0.2 ohms per square. SC13 is more flexible but less conductive. Good adhesion. Stand 500°F. but soften below this. SC15 dries more slowly than SC12 and is suggested for ruling pen and silk screen application. 1/16 oz. SC12 — $2.51, 1 oz. SC12 or SC13 — $7.72, 1 oz. SC15 — $8.33. Solvent SL14 for SC12 and SC13. Solvent SL-2 for SC15.

SC17 FLEXIBLE SILVER MICROPAINT. Very flexible. May be stretched up to 150%. For use on polyethylene, rubber, etc. where there are adhesion and flexibility problems. Has been used for skin contacts in medical tests but we have a superior substitute for this application. Imparts excellent rust-preventive conductive surface on steel for RF gaskets, door closures, etc. Prevents RF leakage at microwave plumbing joints simply by painting over the joints (SC13 is used for the same purpose). Resistance about 0.5 ohm per square or less as applied. Rises to about 10 ohms when stretched 100%. Brush or spray application. 5 oz. — $21.26. Solvent — SL14.

RS14 SHIELDING MICROPAINT. Combines very low cost and a resistance 10 to 20 times lower than any other carbon-pigmented conductive paint known to us. A reasonably heavy spray-applied coat has a resistance of about 5 ohms per square. Higher resistances may be obtained by thinning with solvent and by applying thinner coats. In one application RS14 was substituted for vacuum metallizing for grounding and shielding in a plastic microphone part. Cost dropped from 5¢ down to 1.5¢. Has limitations of poor adhesion to metal and ceramic surfaces and only moderate abrasion resistance. On the inside of wood TV cabinets it has stood tests involving 100% humidity (wet) at 200+°F. for three weeks without change in resistance except across cracks which appeared in the grain. Should be sprayed if possible rather than brushed because of fast drying. 1 Quart — **$6.50.** Solvent SL11.

RS17 FLEXIBLE SHIELDING MICROPAINT (formerly RS17B). Good adhesion to polyethylene, rubber, etc. Good weather resistance and rust preventive characteristics. Will stretch 30-50%. Uses are somewhat similar to those of SC17 but are determined by its higher resistance of 150 ohms per square or lower and very much lower cost. Spray or brush. 1 quart — $14.10. Solvent SL14.

RSE22 EPOXY SHIELDING MICROPAINT. Very good adhesion, abrasion resistance, and chemical resistance. Appears to be unaffected by continuous immersion in 10% salt solution at 200°F. Has many applications in forming ground surfaces, shielding, conductive corrosion protection, etc. 200 ohms per square or less. Curing agent (supplied) is mixed in before use. Pot life is 4 to 8 hours. Brush, spray, or dip. 1 Pint — $15.10. Solvents are SE100 (spray) or SE200 (brush).

RS110 AND RSE100 AIRCRAFT ANTI-STATIC MICROPAINTS (RAIN-EROSION-RESISTANT). Both coatings have a unique formulation which yields optimum anti-static characteristics under a wide range of application conditions and techniques. They may be depended upon to perform satisfactorily even when no equipment is available to test them after application. RS110 is a lacquer-base coating. Chief advantage is fast application and drying without curing agents. However customers have reported the service life to be in excess of 2000 hours without apparent loss of effectiveness on slow speed aircraft. RSE100 is an epoxy coating with very important advantages over neoprene anti-static coatings: Requires only two coats, no special primers, easily recoated and repaired. In accelerated laboratory tests under both dry and salt spray conditions RSE100 abrasion resistance equalled or exceeded that of neoprene anti-static coatings. 1 Pint RS110 — $9.60. Solvent SL14. 1 Pint RSE100 — $15.10. Solvent SE100.

RA-2 ADDITIVE. This is added to commercially available decorative aircraft coatings. It permits decorative coatings to be applied over the black anti-static coatings on radomes and antenna covers without loss of anti-static effectiveness and without static puncture damage to the decorative coatings. RA-2 Additive is being used by U. S. and foreign air lines, aircraft manufacturers, and aircraft electronic manufacturers. Amount for 1 pint of decorative coating — $5.80.

R-SERIES RESISTANCE MICROPAINTS. This is a series of five carefully adjusted resistance paints. It has been estimated that about 4000 1/4-watt resistors can be painted from one 25 cc (1 oz.) bottle. The stock numbers follow: The number following the stock number is the resistance in ohms per square: R01 — 125 ohms (per sq.), R11 — 500 ohms, R21 — 12,500 ohms, R31 — 0.31 megs, R41 — 3.1 megs. The paints may be mixed for intermediate values. By varying the ratio of length to width each stock paint will yield resistors varying from about 1/5th of the indicated value to about 5 or more times the indicated value. Maximum operating temperature is about 250°F. but they will stand much higher temperatures briefly. Brush, spray, ruling pen. 25 cc bottle — $6.50. Solvent — SL14.

UHR-SERIES (ULTRA HIGH RESISTANCE) MICROPAINTS. These seven paints continue above the R-Series in resistance values. Use where a high meg resistor or a slow electrical leak is needed. May be applied with moderate precision with a ruling pen or artists brush. Can replace very expensive high meg resistors in non-critical applications for a fraction of a cent per resistor. Also used to equalize voltage gradients in high voltage insulators, etc. Made with a highly stable, moisture-resistant binder. 25 cc bottle — $15.60. Solvent SL14.

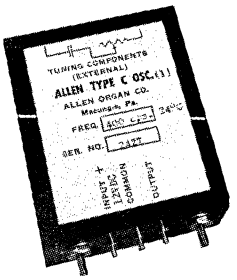
tOrOids OSCILLATORS



ALWAYS IN STOCK
AT ALLEN ELECTRONICS.

Allen Electronics Division manufactures these components in quantity, under the most rigid quality controls, including thorough inspection and testing, for use in the world's finest electronic organs. For this reason we constantly maintain a complete inventory, which is also available to you who desire the added benefits of lower-than-competitive prices and immediate out-of-stock delivery.

TOROIDS

Available from stock. They have been used successfully in such areas as: telemetry, sound and intercommunication systems; geophysical applications; mobile communications; filters; oscillators; and test equipment.

Inductance and "Q" measured at 1 Volt
1,000 c.p.s. — Inductance Tolerance ± 2%
58.2 Hy. to 10.5 Hy. Tolerance ± 5%
Ferrite Core — Inductance Tolerance ± 5%

OSCILLATORS

TYPE "C" AUDIO OSCILLATOR

This compact unit is designed for applications that have moderate requirements for stability in respect to temperature and frequency drift. The transistorized package is completely encapsulated and provides a construction that is extremely rugged.

SPECIFICATIONS

Frequency — Any frequency from 15 Hz. to 10 kHz.
Frequency Accuracy — ± .2% of specified frequency with 12V. D.C. input, resistive load of 200K ohms and 24° C. ambient.
Frequency Drift — Approximately 1% from -20°C. to +45°C. Less than 0.3% with input voltages from 10 to 14V. D.C.
Frequency Adjustment Range (using external components) — ± 2.0% (see arrangements two and three below)
Input Voltage — 5 to 15V. D.C.
Input Current — Does not exceed 5 ma. @12V. D.C.
Output Voltage — Proportional to input voltage. Typically 1.5 to 2.0V. RMS with 12V. D.C. input and load resistance of 200K ohms.
Output Wave Shape — Sinusoidal. Total distortion approximately 2.0% with 12V. D.C. input.
Dimensions — 15 — 249 cps. 4 3/8" x 2 13/16" x 1½"
250 — 10,000 cps. 3 9/16" x 2½" x 1 1/8"

The Type "C" oscillators can be produced in the following arrangements:

1. Any specific frequency in the range at an ambient temperature of 24° C. and with no provision for frequency adjustment.
2. Provision for frequency adjustment of ±2% of a specified frequency by means of an externally connected capacitor (Type "C"). A capacitor will be furnished which will provide the specified frequency at 24° C. ambient.
3. Provision for continuously variable frequency adjustment of ± 2% of a specified frequency by means of an externally connected variable resistance and a fixed capacitor. External components not furnished but component values are specified. This feature is very convenient when a "front panel" fine adjustment of frequency is desirable.

PRICE — Order by specifying type, frequency and arrangement number.

Frequency	Price
15 — 20 Hz.	$39.20
21 — 100 Hz.	$26.50
101 — 500 Hz.	$21.20
501 — 10,000 Hz.	$26.50

QUANTITY DISCOUNT
Discount is applicable for quantities of one frequency only.

Quantity	Discount
1 — 10	Net
11 — 50	Less 15%
51 — 99	Less 20%
100 — up	Less 25%

TYPE "P" SINE WAVE OSCILLATOR

A plug-in unit with a standard octal tube base type connector. A knurled thumbscrew type adjustment on top of the unit provides for variable, fine adjustment of frequency. . . cent of the specified frequency.

SPECIFICATIONS

Frequency — Any frequency from 20Hz. to 200 kHz.
Frequency Drift — Approximately 1% from -20° C. to +45°C. Less than 0.3% with input voltages from 10 to 14V. D.C.
Input Voltage — 5 to 15V. D.C.
Input Current — Does not exceed 5 ma. @ 12V. D.C.
Output Voltage — Proportional to input voltage. Typically 1.5 to 2.0V. RMS, with 12V. D.C. input and load resistance of 200K ohms.
Output Wave Shape — Sinusoidal. Total distortion approximately 2.0% with 12V. D.C. input.
Dimensions — Mounting area — 2 3/16" square. Overall height — 4 3/4" max. Height above octal mounting socket — 4" max.

PRICE — $35.00. Order by specifying type and frequency.
QUANTITY DISCOUNT—Same discount schedule as Type "C"

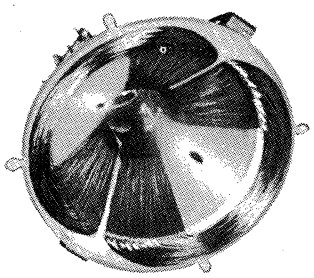
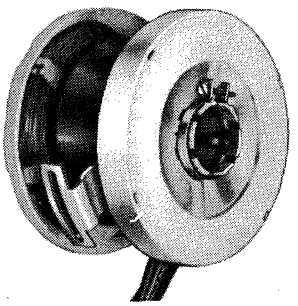
Amperex Video Display Devices

MAGNETIC DEFLECTION YOKES



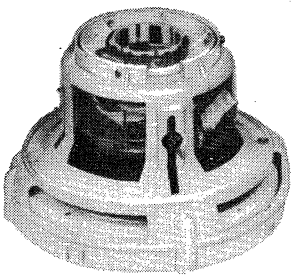
SERIES AT1040

Amperex B & W Line Deflection Yokes has been designed for use with 90° and 110° picture tubes having a neck diameter of 28mm. They employ saddle shaped line coils and toroidal frame coils with coinciding deflection centers. They have been designed for operation with tube-equipped or transistor-equipped TV.



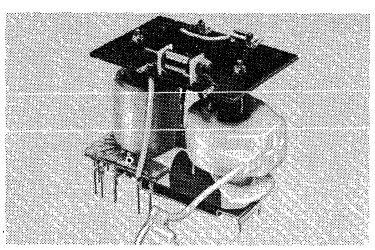
SERIES AT1055

Amperex Color Line of Deflection Yokes consists of two major groups. Variations of our **Compact** color deflection yoke AT1055 Series can be used on 14-25 inch 90° shadow mask color CRTS. This yoke employs saddle horizontal and vertical coils isolated by means of non-flammable polypropylene shell-liners. The horizontal and vertical coils are connected in series, but can be parallel connected upon request.



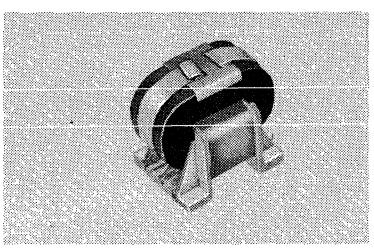
SERIES AT1022

Amperex Second Major Line of Color Deflection Yokes is our AT1022 Series. This professional series is aimed at monitor manufacturers requiring a high quality product. Designed for 90° shadow mask color CRT sizes 18-25" offering very tight tolerances. This yoke is designed to be rotated and oriented within its own mechanical housing.



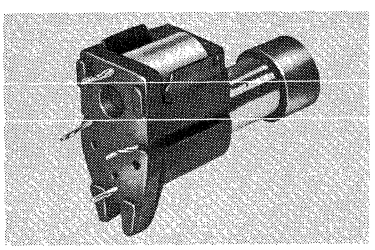
HORIZONTAL OUTPUT TRANSFORMERS: TYPE AT2083

Two types available. 3rd harmonic and 5th harmonic tuned 20-25 KV execution. Both types are of flame proof construction. Both executions are designed for use in color TV receivers.



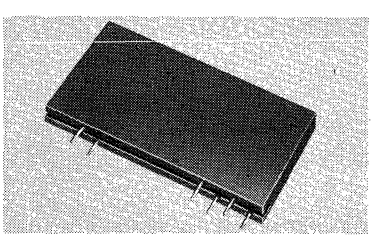
VERTICAL OUTPUT TRANSFORMERS: TYPE AT3513

Amperex AT3513 vertical output transformer is designed for tube equipped and transistorized television receivers. This output transformer is intended for use with 19 and 23 inch 110° CRTS, in conjunction with the Amperex Deflection Yoke AT1040. The magnetic circuit is comprised of 2 C-cores and three separate windings.



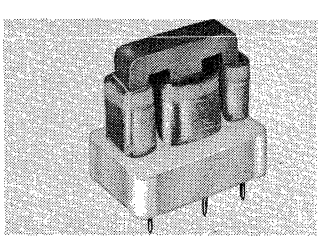
ADJUSTABLE LINEARITY CONTROL: TYPE AT4042/20

This unit has been designed for use in color TV circuits to adjust the linearity of the line deflection. It consists of a coil wound about a FERROXCUBE rod and three FERROXDURE magnets. This control is adjustable by means of a rotating magnet which adjusts the biasing field and thus the linearity of the line deflection.



DELAY LINES: (TYPE DL40 ILLUSTRATED)

Two types of Glass Delay Lines are available from Amperex. Both D. lines are intended for use in decoded circuits of color TV receivers. For receivers up to European PAL standard the nominal frequency of these lines is 4.433619 MHz and the phase delay time is 63.943 microseconds.



PINCUSHION TRANSDUCTOR: TYPE AT4041

This transductor is used in conjunction with deflection circuitry for large screen color television to correct for North-South and East-West distortion. Only device of its type, offering four-way correction. An amplitude control is also available to vary the amount of correction. Will replace active circuits performing same task.

Amperex®

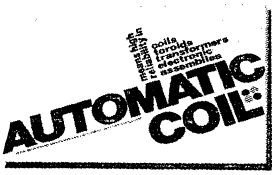
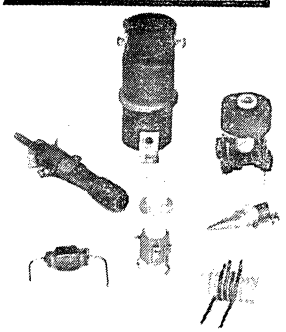
automatic coil

A DIVISION OF DESIGNATRONICS INC.

SPECIAL ASSEMBLIES

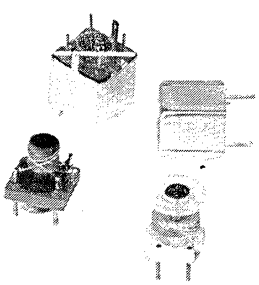


Automatic Coil, with nearly 20 years of experience, is a reliable source of standard RF coils, transformers, toroids and filters. And an innovative source of custom designed components and assemblies. Write for free catalog.



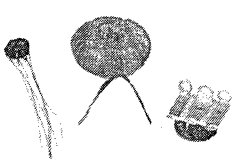
COMMERCIAL IF COILS

Printed Circuit and Panel Mount IF's for use in home entertainment industry.



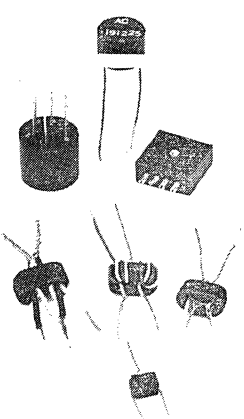
VARIABLE RF COILS — MINIATURE PRINTED CIRCUIT

For both military and commercial applications where small size is desirable. Available in 5/16", 3/8" and 13/32" square sizes.



OPEN CONSTRUCTION TOROIDS

Precision toroids fabricated to exacting customer specifications.

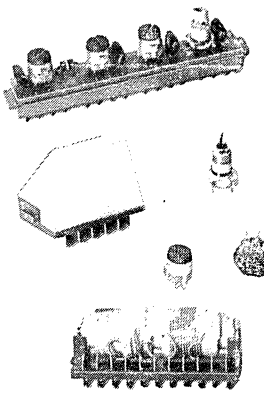


ENCAPSULATED TOROIDS

For both military and commercial applications. Fabricated and encapsulated to customer specifications.

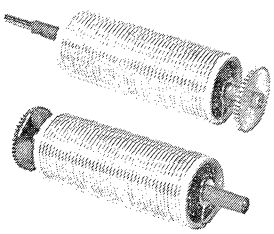
BALUN TRANSFORMERS

Miniature and sub-miniature line matching transformers for use in tuner and antenna applications.



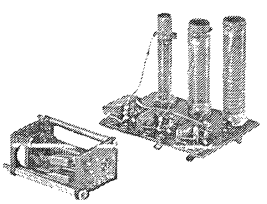
COIL ASSEMBLIES

Shown here are typical special coil assemblies manufactured for use in the U.S. Navy WRC-1 Receiver-Transmitter System. (Receiver R1051 Transmitter 827, Amplifier AM-3007. Antenna Coupler CU-937).



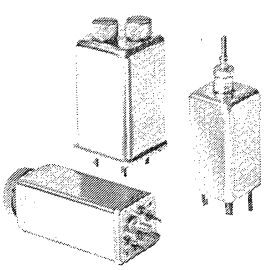
RF COIL ASSEMBLIES

These high frequency, precision coil assemblies are produced for the U.S. Navy PRC-47 Personnel Radio Communication System.



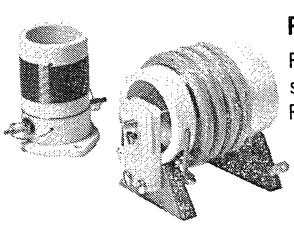
VARIABLE PITCH COILS

Complete facilities for variable pitch winding, to customer's specific requirements.



R-F & I-F XFMRS

Hermetically sealed R-F and I-F transformers for military and high quality commercial applications.



R-F HIGH VOLTAGE XFMRS

Radio frequency high voltage power supply transformers used on the Radar Jitter Tester.
